Georgiana Street Terrace

HISTORY

Georgiana Street is located off Camden Street and links to Royal College Street and St Pancras Way (originally Kings Road) was first called Parliament Street. The terraced houses that now line the northern parts of Royal College Street were developed gradually during the 1840s and 1850s; by the 1860s, the street was built up on both sides along its length.

By the 1860s, the northern side of what had now become Georgiana Street was developed with built form. The mid 1870s OS mapping shows the houses on Royal College Street with gardens behind, a single long building on the northern side of Georgiana Street, and various other buildings ranged against the rear garden walls to Royal College Street. Bangor Wharf is separated from Eagle Wharf to the north by an inlet dock. This situation has altered slightly by the 1890s, when a gap has opened on the northern side of Georgiana Street and further buildings have appeared within the site. This situation persists throughout the early part of the 20th century, during which period the incinerator was a built to the south of Georgiana Street.

The buildings reflect the diverse and changing architectural styles over the last two hundred years. Terraces of flat fronted early to mid 19th century houses now fronted by shops, mid Victorian stucco terraces, Victorian Gothic buildings, late Victorian and Edwardian red brick

parades four and five storeys high with decorative gables, imposing banks, places of entertainment and public houses occupying key focal sites, and 20th century buildings all contribute to the wide ranging variety of architectural styles.

SURROUNDING AREA

It is just a short walk to Camden (Northern Line) Underground or Camden Road Over ground which provides good access to on an East West axis.

In the centre is Camden Town, with Camden High Street and Chalk Farm Road as its main thoroughfare.

ASSESSMENT OF SIGNIFICANCE

The mid 19th century, yellow stock brick terraces of Georgiana Street are Grade II listed but does not fall within a conservation area and are of significance within the historical context of Camden mostly owned either by Camden Council or by the Georgiana Street Housing Co-op. The character and appearance are bound to the history of the area of Camden. The Heritage and Townscape Appraisal describes that "a major impact on the character of the east end of Georgiana Street in the first half of the 20th century was the St Pancras Electricity Generating Station. In 1891, the vestry of St Pancras was the first local authority in London to supply electricity and the EDF Energy sub-station still exists today at the corner of Georgiana Street and Royal College Street." Camden Town Appraisal summaries the special interest of Camden as " A traditional wide shopping street linking the busy junction at Mornington Crescent to the eclectic and lively town centre at the heart of Camden Town. The focus of Camden Town is Britannia Junction which acts as a hub and an important interchange, with busy, noisy, dynamic and diverse characteristics. This retail and commercial area is powerfully urban in character with few openings between the continuous building lines and an absence of public open spaces and soft landscaping".

REASON FOR THE PROPOSED ALTERATIONS

The existing timber windows are in a poor condition. The joinery of these sliding sashes has extensive areas of rot and has loss of joints to the frame members. Heat loss and draughts are a concern to the applicants as is condensation, air tightness and maintenance; hence they wish to replace the sliding sash windows generally.

WINDOW PROPOSALS

We intend to replace the existing single glazed timber sliding sash windows which are in poor condition with new like for like, double glazed painted white/off white traditional timber sliding sash windows with cords and weights.

The design of the new windows will replicate the existing windows with better quality and thermal performance.

The character and appearance of the property will be retained and be in keeping with the surrounding area. The proposal seeks mirror the layout of the existing.

The new windows will incorporate thermally broken double glazing, to Building Regulation Standards. This will improve the living conditions of the residents at the property together with adequate ventilation will improve the development of condensation within individual flats.
