10k Raster Mapping

Published 2006

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

Unexploded Ordnance Preliminary Risk Review
79 Redington Road, Hampstead, London NW3 7RR

MACC International Ltd (MACC) has conducted a preliminary risk review for the site footprint. The review has drawn on open source and in-house information, references have been provided where available (See Annex A).

The review has been conducted to provide Listers Geotechnical Engineers with a review of the risk which may be posed by UXO while conducting soil investigations on the site.

This document has been produced in the United Kingdom by MACC International Limited and has been provided solely as an aid in decision making. It is not intended to be used by any person for any purpose other than that specified. Any liability arising out of use by a third party of this document for purposes not wholly connected with the above shall be the responsibility of that party, who shall indemnify MACC International Limited against all claims, costs, damages and losses arising out of such use.

Although the area suffered significant bombing during WWII, no records were found to confirm a bomb strike within the site footprint. Whilst considering the history of the site and the level of post-war development, the following conclusions have been reached:

- It is considered that there is not a credible likelihood of encountering UXO on the site. Consequently, the UXO risk is considered to be LOW within the site boundary.
- Nevertheless, it is recommended that:
    - All site personnel are provided with a UXO Safety Awareness Talk before intrusive works are commenced.

I trust this document has provided you with sufficient information to meet your immediate needs. Should you require anything further, please do not hesitate to contact me.

Yours Sincerely

John Morrison
Operations Manager

Unexploded Ordnance Preliminary Risk Review

Site location	Site Address: 79 Redington Road, Hampstead, London NW3 7RR Grid Reference: 525579, 186148 
Scope of Intended works	Preliminary review of the risk that may be posed by UXO to geotechnical investigations.
History	HAA gun sites were located to the north, east and west of the site to defend against air attack and combat engagements with enemy aircraft did take place.
Wartime History	No records were found to confirm a bomb strike within the site footprint and LCC Bomb Damage Map 27 indicates that property within the site footprint did not suffer damage from enemy bombing. The nearest recorded bomb fell c.a.300m east of the site at Grange Gardens. Consequently, this source of UXO contamination is considered unlikely, but cannot be ruled out entirely.
Unexploded Ordnance (UXO) Finds	No reports were found to indicate that items of UXO have been found within or recovered from the site footprint.
Post War Development	The majority of the site has undergone a limited level of post-war development.
