

Dear Mr Benbarek,

My wife and I have reviewed the planning application for Flat A, 3 Lyndhurst Gardens NW3 5NS (Planning Application 2018/0499/P) and we are very concerned.

The proposal is to erect a glass box that will be in our daily line of sight and given the proposed materials that are to be used, there will be significant light pollution to our property every day but particularly at dusk and throughout the evening.

Assuming the council decide to grant permission to this extension, I believe it is imperative that it is constructed in a material other than one which is translucent so as to prevent light disturbance to other tenants.

Regards,
