

Example of lights

The illumination to the signs is very local to the sign only using LED trough lights. The lights are small at only 50mm height. The lighting will be positioned to shine toward the fascia and down and not up towards the flats above.

The light to the main fascia will span the letters only and is finished in black to match the main fascia.

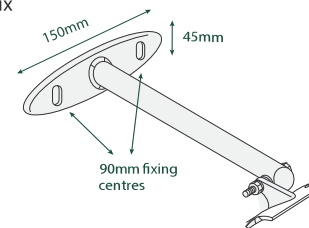

The maximum luminance levels of 300cdm2 are within those prescribed in the lighting engineers report.

The lights do not present a hazard to road users, and will be use during store opening hours only,
