

BBA 686

MANSARD ROOF EXTENSION TO 139-141 QUEENS CRESCENT, LONDON

PROPOSED EXTERNAL MATERIALS

MANSARD ROOF AND WALLS:

SIG Armourplan: High-quality reinforced PVC roof systems (examples available on request)

Secure seam welding: Armourplan PVC membranes are designed to be welded together to form homogenous, reliable joints.

SIG Armourplan is a Single ply membrane which provides with a standing seam look very similar to the Zinc cladding effect. The standing seam can be placed anywhere between 450 -500 or 600mm centres.

WINDOWS:

Double glazed Aluminium windows with colour coated metal fascia around.

PARAPET WALL CAPPING:

It is likely the existing parapet wall capping must be replaced due to the waterproofing works on the roof. We propose aluminium wall capping to match windows and fascia colour. They are easy to install and provide with a clean and neat finish.
