Dear Sam

## **Mount Pleasant: Phoenix Lane Marketing Suite – Assessment of Ground Contamination Risks**

### **1. Introduction**

This letter presents the findings of a review of information held related to ground contamination in the area of the proposed Marketing Suite on the Phoenix Place site, part of the Mount Pleasant development. The review has been undertaken by AECOM Infrastructure and Environment (UK) Ltd (AECOM) on behalf of their client, Taylor Wimpey Central London (TW) following TW's request of 21<sup>st</sup> May 2018.

The objective of this review is to support the Marketing Suite application for planning permission and to provide recommendations on any potential risks presented by potential contamination and any precautions that should be taken during the works to construct the Marketing Suite. The review provides a summary of the findings and conclusions of the Environmental Risk Assessment and Site Investigation works undertaken to support the application for planning permission for the construction of the Marketing Suite ahead of further development on site.

The Mount Pleasant Development (the Wider Site) covers two areas straddling Phoenix Place. The initial phases of development are scheduled to take place on the Phoenix Place site. The Marketing Suite (the Site) is located within the footprint of the second phase of construction. Prior to commencement of the second phase, it is understood that the Marketing Suite will be demolished in its entirety, and subsequent development will take place that will include the footprint of the Marketing Suite and will form part of a separate planning application. The scope of this report is limited to use of the land for the Marketing Suite.

### **2. Background and Overview of Previous Works**

A preliminary environmental risk assessment (PERA) for the Wider Phoenix Place site was undertaken by Watermans in September 2016 (Ref. 1/ Annex B). The PERA identified historic site uses that posed a risk of potential impacts to soil and groundwater. A subsequent intrusive environmental site investigation and generic quantitative risk assessment (GQRA) was undertaken by Watermans in April 2017 to provide general site characterisation and, more specifically to target the areas of former land use that posed a risk of potential impact to soil and groundwater (Ref. 2/ Annex C).

The GQRA report identified exceedances of generic screening criteria for soils and groundwater designed to be protective of human health and controlled waters. The overall site risk rating was classified as Medium, however a number of recommendations were made for engineering controls to be implemented as part of the construction design process that would break pollutant pathways between identified sources and potential sensitive receptors, thereby reducing the environmental risk rating to LOW.

A Remediation Strategy was produced by AECOM (Ref. 3/ Annex D), detailing the remedial works and monitoring required to be undertaken in order to verify that potential contaminant pathway linkages would be broken during the construction phase and to provide a framework for a subsequent Remediation Implementation Plan, to be produced by the Principal Contractor.

As part of the recommendations made in the GQRA report and following reports of asbestos in spoil resulting from archaeological excavations, an identified area of made ground soils impacted with asbestos containing materials (ACM) adjacent to the west of the Marketing Suite Site was further investigated by Dunton Environmental. The investigation delineated the area of impact and removed impacted soils for off-site treatment and disposal. The results of this work were provided in a letter report by Dunton Environmental dated 28<sup>th</sup> April 2018 (Ref. 4/ Annex E).

This report reviews and summarises phases of investigation completed to date, with reference specifically to the Marketing Suite site, and makes conclusions and recommendations as to the potential environmental risk to human health and controlled waters posed by construction of the Marketing Suite.

### 3. References

The reports reviewed as part of this assessment are referenced below, and are also presented in the attached Annexes B to D:

### 4. Historic Site Use and Contaminants of Concern

A review of the Waterman PERA report indicates the following site history for the Marketing Suite site boundary:

- 1851: Limited detail is shown, although there does not appear to be any buildings on the site.
- 1874-1875: The site appears to be developed, with one building on the eastern part of the site denoted as a Cartridge manufactory.
- 1896: The site appears to have been redeveloped with larger buildings on the eastern side of the site, and an open area on the western side. No indications of the building uses are provided.
- 1916: Further redevelopment of the buildings and boundaries has taken place, but no indications of building uses are provided.
- 1927: Fire Insurance Plans indicate that the site is part of the G.Munro Ltd. garage. A sunken petrol tank is referenced off-site to the north.
- 1946-1949: Industrial buildings shown on site in an aerial photo.
- 1951 - 1967: Fire insurance plans indicate that the site is part of the Munro transport Co. Ltd. Petrol tanks are still referenced off-site to the north.
- 1952-1953: A garage and other buildings present on the site.
- 1965: A garage on the site is shown as having been demolished.
- 1975-1983: The footprint of a building on site appears unchanged from 1965.
- 1982-1989: No significant change
- 1991: Mail Rail House present on site, with car parking adjacent.
- 2016. Mail Rail house demolished and site used for car parking.

In terms of potential contamination risk, the most significant historic site uses identified are the operation of a garage / transport facility between c. 1927 and c. 1965. The potential contaminants of concern (PCOC) associated with this site use are:

- Total Petroleum Hydrocarbons (TPH);
- Benzene, Toluene, Ethylbenzene and Xylenes (BTEX);
- Polycyclic aromatic hydrocarbons (PAHs)
- Volatile Organic Compounds (VOC);
- Semi Volatile Organic Compounds (SVOC); and
- Asbestos

## 5. Geology and Hydrogeology

Based on a review of the reports listed in Section 2, the area surrounding the Marketing Suite Site comprises primarily Made Ground to a maximum depth 5.2m, with residual areas of alluvium (in the former course of the River Fleet (to the east of the site) and patches of River Terrace Gravels (making up the Hackney Gravel Formation). The site is underlain by the London Clay Formation with an estimated thickness of 5.4 – 9.4m, and subsequently by the Lambeth Group, the Thanet Sands and Upper Chalk.

The River Thames is located approximately 1.6km south of the site and the Regents Canal, 1.1km to the North. The River Fleet, which historically flowed to the east of the site, runs in a culvert beneath Phoenix Place (road), discharging into the River Thames, and is considered a viable pathway for impacts to controlled waters receptors.

Although the Made Ground beneath the site is not classified as an aquifer, any residual alluvium, sands and gravels present on site are considered Secondary (A) aquifers. These are underlain by the Unproductive Stratum of the London Clay, and subsequently the Secondary (A) aquifers of the Lambeth Group and Thanet Sand Formations. The site is ultimately underlain by the Principal Aquifer of the Upper Chalk Formation.

The Watermans PERA report identified one groundwater abstraction borehole within 1km of the site: a Thames Water potable abstraction borehole is located 517m North East of the site, which is considered likely to influence the local groundwater flow regime within the aquifers beneath the London Clay. Anecdotal evidence of abstraction boreholes on the Wider Site were reported in the Watermans PERA, but no evidence of these was encountered during subsequent works.

## 6. Site Investigation Findings

The GQRA investigation of the Wider Site (Ref. 2) combined a site wide assessment with targeted intrusive locations in areas where site history indicated an elevated risk of potential impacts. In some areas, access was restricted by the presence of basements, underground infrastructure and soil stockpiles, but it is considered by AECOM that the areas of primary concern across the Wider Site have been adequately characterised.

Only one intrusive location is located within the footprint of the proposed Marketing Suite, BH102 from the Geotechnics (2005) site investigation. The Geotechnics 2005 investigation report has not been viewed by AECOM, but is summarised in the Watermans GQRA report. The approximate location of the Marketing Suite with respect to previous site investigation locations is shown as the red rectangle on the figures presented in Annex F.

Laboratory analytical data from a sample collected at BH102 was compared by Watermans to screening criteria protective of a Residential with No Plant Uptake use, and concentrations of lead and mercury were reported to exceed the adopted criteria. The Watermans GQRA report (Ref. 2) concluded that the exceedances reported (in BH102 as well as in all other samples collected on the wider Phoenix Place Site) did not pose an acceptable risk to human health or controlled waters receptors, on the understanding that engineering control measures (subsequently adopted in the site Remediation Strategy) were to be adopted. The primary control measure was the emplacement of clean cover layers in soft landscaping or hardstanding to break potential direct contact pathways to human health receptors.

Ground gas monitoring from boreholes at the Wider Site reported low concentrations of Carbon Dioxide, and low levels of gas flow which resulted in a gas flow regime classified by Waterman of Characteristic Situation 1 (CS1), indicating that no protective measures are required. Ground gas monitoring of BH102 within the footprint of the Marketing Suite was completed over four rounds during 2005 and was also interpreted by Watermans as resulting in Characteristic Situation 1 (Ref. 2).

During the works by Dunton Environmental to delineate and remove the identified ACM (Ref. 4), adjacent to the Marketing Suite Site, soils impacted with petroleum hydrocarbons were identified, excavated and placed in quarantined stockpiles and subsequently sampled. Soil samples were sent for laboratory analysis in order to characterise the waste class, and out of a total of approximately 300m<sup>3</sup> of asbestos containing soils, an estimated 60m<sup>3</sup> was reported to be impacted by elevated concentrations of petroleum hydrocarbons. A total of 300m<sup>3</sup> (695 tonnes) of impacted soils were sent off site for treatment and disposal at appropriate waste disposal facilities. Soil samples were collected from the base and sides of the excavation and scheduled for analysis of a suite of analytes including TPH, PAHs and heavy metals. Samples from the base of the excavation reported concentration of TPH below the laboratory limit of detection (LOD). Samples collected from the sides of the excavation were scheduled for Asbestos analysis only and were reported at below the LOD.

## 7. Proposed Site Use and Assessment

It is understood that the Marketing Suite will comprise a temporary structure approximately 12.5m x 22.3m in dimension that covers the entire footprint of the Site. The footprint of the building is provided on the figure shown in Annexe A, and is broadly within the footprint of the proposed Phase 2 development, which will later replace the Marketing Suite.

It is understood that the Marketing Suite building will be constructed with a suspended floor over pad foundations with limited excavation works required during its construction.

The wider human health site assessment undertaken as part of the GQRA was assessed against Commercial and Residential with No Plant Uptake GAC. This is considered conservative given the Marketing Suite would be classified as a Commercial site use, and in addition no direct contact pathways will be active, and the building is proposed to be temporary. The gas regime at the site is classified as CS1, indicating that no additional gas protection measures are required.

During the use of the Marketing Suite, the surrounding site area will be undergoing development and the potential exposure risk to workers will fall within the same general requirements as construction workers on site.

The Wider Site assessment for soil and groundwater did not identify risks to controlled waters. It is not anticipated that the proposed construction methods will impact the identified receptors based on the proposed shallow pad foundations that will not form preferential pathways.

## 8. Conclusions

A Marketing Suite is proposed to be developed on part of the Phoenix Place site, an area which will later fall within the footprint of the second phase of construction. Previous reports detail the setting, history, and soil and groundwater quality of the Wider Site, of which the Marketing Suite site (the 'Site') forms only a part.

The environmental setting for the Marketing Suite is as described for the Wider Site. A review of desk-based information for the Marketing Suite found that the only potentially significant specific source of contamination on the Site was a garage/ transport facility shown on historical maps between 1927 and 1965. No features such as tanks were reported on the Site.

Previous site investigations are considered to have adequately characterised the Wider Site with regard to potential risk to sensitive receptors from soil and groundwater impacts. Limited intrusive works have been undertaken within the specific footprint of the Marketing Suite site (one 2005 borehole location that was sampled for soils and monitored for gas and groundwater). It is considered that this analytical data can be viewed in the context of data obtained from adjacent portions of the Wider Site to assess the Marketing Suite site conditions in particular with respect to made ground composition, ground gas and groundwater quality.

Based on the data provided in the reports listed in Section 2, above, and the mitigation measures proposed below, we do not consider that a viable pathway exists between the identified soil and groundwater impacts and

future site users or controlled waters receptors. As such we consider that no unacceptable risks to environmental receptors from the proposed Marketing Suite development have been identified.

## 9. Recommendations

Based on current knowledge the site is considered to be suitable for development for use as the proposed Marketing Suite without further site investigation or remediation.

In line with the Remediation Strategy (Ref. 3), dust mitigation measures should be implemented in order to minimise the risk to site workers and neighbours from potential impacts in dust and a watching brief maintained for potential vapour sources.

In the event that deeper foundations or excavations than those currently proposed are required that may result in penetration through the London Clay formation, appropriate protection measures should be implemented as outlined in the Remediation Strategy.

In addition, it is recommended that a watching brief is implemented during any excavation works that form part of the Marketing Suite construction in order to identify any unexpected contamination or impacts that may not have been found during previous site investigation works. Protocols for a watching brief and actions on identification of unexpected contamination are outlined in the Remediation Strategy.

Yours sincerely,

## Executive Summary

### Objectives

The Livemore Partnership LLP, on behalf of Royal Mail Group, instructed Waterman Infrastructure & Environment Limited ('Waterman') to update the Preliminary Environmental Risk Assessment (PERA) undertaken in 2013 that accompanied a suite of planning applications for the redevelopment of land adjacent to, and forming part of, the existing Mount Pleasant Sorting Office in Farringdon. This updated PERA presents the findings for Phoenix Place site only, which is located in the London Borough of Camden.

### Site Setting

<b>Current Use</b>	Royal Mail use the Phoenix Place site for staff car parking. .
<b>History</b>	Rich history of industrial use, with numerous garages, a print works, a food factory, a foundry and residential properties on the Phoenix place site. The Phoenix Place site was cleared of buildings during the mid-1970 and Mail Rail House (Petronne House) was demolished in 2014/2015.
<b>Ground Conditions</b>	Extensive depths of Made Ground (1.5 to 5.2m below ground level (bgl)) underlain by shallow depths of Hackney Gravel Member (0.9 to 1.2m in thickness). The Hackney Gravel Formation is underlain by the London Clay Formation (5.4 to 9.4m in thickness). The Lambeth Group, Thanet Sand Formation, and Upper Chalk Formation underlie the London Clay Formation.
<b>Controlled Waters</b>	The Hackney Gravel Member, Lambeth Group and Thanet Sand Formation are Secondary A Aquifers. The London Clay Formation is classed as Unproductive Strata. The Upper Chalk Formation is a Principal Aquifer.  Groundwater samples recovered from the Secondary A Aquifer within the Hackney Gravel Member during the 2005 Site Investigation were not found to be grossly contaminated.

### Conclusions

Based on the proposed land uses of the Phoenix Place Development, as defined by the planning permission granted in 2015 (2013/3807/P), together with data reported from the 2005 Site Investigation and the known current contamination sources identified within this PERA, the overall contamination risk rating for the Phoenix Place site is **Medium**. In the absence of recommendations set out in this PERA, the following potential pollutant linkages have been identified for the Phoenix Place site:

- Construction workers may come into direct contact with potentially contaminated soils and material, being exposed to ground gases and vapours in confined spaces;
- Off-site users/residents may inhale potentially contaminated soils and dust during construction works; and
- Buried foundations, structures, or services may come into direct contact with contaminated soils and groundwater.

### Recommendations

The recommendations below outline preliminary remedial and mitigation measures that require confirmation through an additional Site Investigation on the Phoenix Place site. Based on the successful implementation of these measures, the contamination risks are anticipated to be **Low** and therefore it is unlikely that the Phoenix Place site would be capable of being classified as Contaminated Land under Part IIA of the Environmental Protection Act 1990; thus meeting the requirements of paragraphs 120 to 122 of the National Planning Policy Framework.

- A Site Investigation encompassing the Phoenix Place Development (Plot P1 and Plot P2) to further establish the underlying ground conditions, contamination status of the soils, the Secondary A Aquifer within the Hackney Gravel Member, together with the ground gas and vapour regime;
- Based upon the results of the Site Investigation, a Generic Quantitative Environmental Risk Assessment (GQRA) should be prepared encompassing Phoenix Place Development (Plot P1 and Plot P2) in which the pollutant pathway linkages are quantified where possible and assessed;
- A Remediation Strategy encompassing Phoenix Place Development (Plot P1 and Plot P2) should be prepared detailing the remedial strategy required to prevent the active pollutant pathway linkages identified from the GQRA;

- 
- Following completion of the Sections, Validation Reports encompassing Phoenix Place Development Plot P1 and Plot P2 should be prepared, detailing the remedial measures taken and confirming all active pollutant pathways have been mitigated; and
  - Since piles are considered likely to penetrate the London Clay Formation, Foundation Works Risk Assessments (FWRA) should be prepared for the Sections, encompassing the Phoenix Place Development Plot P1 and Plot P2 and details the required measures to prevent preferential pathways.

Actions required prior to, and during construction, are as follows;

- The validity and status of the groundwater abstraction well on the Phoenix Place site should be determined prior to construction works. If located, the well should be decommissioned in accordance with Environment Agency guidance;
  - Following completion of the Site Investigation, boreholes progressed and installed below the London Clay Formation (including any historical wells discovered) should be appropriately decommissioned so as not to act as a preferential pathway in the future;
  - A Construction Environmental Management Plan (CEMP) should be prepared detailing the measures for managing waste/stockpiling during construction and techniques for suppressing dust;
  - As part of the Phoenix Place Development, Made Ground would be removed. A Preliminary Waste Classification Assessment (PWCA) should be undertaken prior to the removal of material to determine the most appropriate disposal options;
  - The Phoenix Place site is considered to be at risk from unexploded ordnance (UXO). Measures recommended within the appropriate UXO reports should be followed throughout the investigatory and construction phases;
  - During construction, potentially contaminative substances should be stored and handled in accordance with the Control of Substances Hazardous to Health (COSHH) Regulations 2002 to prevent fugitive emissions migrating to the Made Ground and underlying groundwater; and
  - Construction workers should wear the appropriate Personal Protective Equipment (PPE), adhere to good practice hygiene and safety measures, the Confined Space Regulations 1997 and the Control of Asbestos Regulations 2012.
-

## 1. Introduction

### 1.1 Objectives

The Livemore Partnership LLP, on behalf of Royal Mail Group (RMG), instructed Waterman Infrastructure & Environment Limited (Waterman) to update the Preliminary Environmental Risk Assessment (PERA) undertaken in 2013 that accompanied a suite of planning applications for the redevelopment of land adjacent to, and forming part of, the existing Mount Pleasant Sorting Office in Farringdon. This updated PERA presents the findings for Phoenix Place site only, which is located in the London Borough of Camden. A separate PERA has been prepared for the adjacent Calthorpe Street site, which is located in the London Borough of Islington.

The objective of this PERA is to create a preliminary Conceptual Model for the Phoenix Place site, whereby the potential pollutant pathway linkages are identified in relation to ground contamination. This PERA has been submitted to the London Borough of Camden to support the approval of Planning Condition 6(a) of the Phoenix Place Development planning permission (ref. 2013/3807/P). The findings of this PERA will also be used to inform the scope of the further Site Investigation, as required by Planning Condition 6(b).

### 1.2 Current Site

The Phoenix Place site is located at National Grid Reference 530945, 182264, located within the Clerkenwell area of London and within the administrative boundary of the London Borough of Camden. The location of the Phoenix Place site is shown on Figure A1 and Figure A2 of Appendix A.

The topography of the Phoenix Place site falls from north-west to south-east with four distinct levels present as a result of historical buildings, all of which have now been demolished. The lowest part of the Phoenix Place site is in the eastern corner.

Access to the Phoenix Place site is from Calthorpe Street to the north or Mount Pleasant to the south both of which lead on to Phoenix Place. With the exception of Phoenix Place (road) the remainder of the Phoenix Place site is in use as a Royal Mail staff car park. The surface of the car park comprises compacted fill material and concrete, although where present the concrete surface is often in poor condition. No buildings are present on the Phoenix Place site, with Mail Rail House (Petrona House) demolished to ground level in 2014/2015.

The culverted Fleet River Sewer passes beneath Phoenix Place (road) and flows in a southerly direction, outfalling in the River Thames.

### 1.3 Proposed Development

Planning permission for the Phoenix Place Development was granted in March 2015 for the following;

*Comprehensive redevelopment, following the demolition of existing buildings, to construct four new buildings ranging from 5 to 15 storeys (above basement level) in height, to provide 38,724sqm. (GIA) of residential floorspace (345 dwellings) (Class C3), 823sqm (GIA) of flexible retail and community floorspace (Use Classes A1, A2, A3,D1, or D2) with associated energy centre, waste and storage areas, basement level residential car parking (54 spaces), the re-provision of Royal Mail staff car parking (approx. 196 spaces) cycle parking, residential cycle parking (431 residential spaces) hard and soft landscaping to provide public and private areas of open space, alterations to the public highway and all other necessary excavation and enabling works.*

The Phoenix Place Development is split into two areas known as Plot P1 and Plot P2, as shown in Figure A3 of Appendix A, comprising four separate buildings known as Buildings A, B, C and D, also shown on Figure A3. A description of the Phoenix Place Development (Plot P1 and Plot P2) is given below.

Building A, a 'U' shaped building located in the southern part of the Phoenix Place Development forms Plot P1, which closely follows the alignment of Gough Street, Mount Pleasant and Phoenix Place. Building A, which would be between five and 15 storeys in height, would accommodate residential, retail and community uses. The two-storey basement beneath Building A, which also extends under a public square, would provide Royal Mail staff parking, residential car parking, bike storage, water storage, plant rooms and a ground source heat pump.

The northern part of the Phoenix Place Development, which forms Plot P2, would comprise Buildings B, C and D separated above ground by a communal garden, a courtyard and public open space. Buildings B, C and D, which would be between five and 10 storeys in height, would accommodate residential, retail and community uses. A separate basement would be created beneath Buildings B and C, and below the courtyard to accommodate car parking, plant rooms, lobby, residential and commercial uses.

Public and private communal amenity space provided within the Phoenix Place Development at ground level would comprise a combination of hard and soft landscaped areas. Soft landscaped areas within public open space would comprise lawn, planting and raised planting beds. Trees would be planted throughout the Phoenix Place Development, particularly along Mount Pleasant and within the public open space.

## 1.4 Planning Context

Condition 6 of the Phoenix Place Development planning permission (ref. 2013/3807/P) relates to contaminated land and seeks that prior to the commencement of work for each Section or stage in development that the following components are undertaken, submitted, and approved by the London Borough of Camden:

- Condition 6(a): PERA;
- Condition 6(b): Site Investigation Strategy, accompanying Site investigation and Geo-environmental interpretative report;
- Condition 6(c): Remediation strategy;
- Condition 6(d): Verification plan; and
- Condition 6(e): UXO and any further mitigation measures required.

This PERA is intended to be submitted to the London Borough of Camden for approval in accordance with Planning Condition 6(a) of the Phoenix Place Development planning permission (ref. 2013/3807/P). The PERA sets out the potential pollutant pathway linkages that are identified in relation to ground contamination, which will be used to inform the scope of the further Site Investigation, as required by Planning Condition 6(b).

## 1.5 Regulatory Context

The National Planning Policy Framework (NPPF) sets out Government planning policy for England and how this is expected to be applied to development. Paragraphs 120 to 122 of Section 11 – Conserving and Enhancing the Natural Environment of the NPPF relate to contaminated land matters and state the following:

*“To prevent unacceptable risks from pollution and land instability, planning policies and decisions should ensure that new development is appropriate for its location. The effects (including cumulative effects) of pollution on health, the natural environment or general amenity, and the potential sensitivity of the area or proposed development to adverse effects from pollution, should be taken into account. Where a site is affected by contamination or land stability issues, responsibility for securing a safe development rests with the developer and/or landowner.*

*Planning policies and decisions should ensure that:*

- *the site is suitable for its new use taking account of ground conditions and land instability, including from natural hazards or former activities such as mining, pollution arising from previous uses and any proposals for mitigation including land remediation or impacts on the natural environment arising from that remediation;*
- *after remediation, as a minimum, land should not be capable of being determined as contaminated land under Part IIA of the Environmental Protection Act 1990; and*
- *adequate site investigation information, prepared by a competent person, is presented.*

*In doing so, local planning authorities should focus on whether the development itself is an acceptable use of the land and the impact of the use, rather than the control of processes or emissions themselves where these are subject to approval under pollution control regimes. Local planning authorities should assume that these regimes will operate effectively. Equally, where a planning decision has been made on a particular development, the planning issues should not be revisited through the permitting regimes operated by pollution control authorities.”*

In order to assess the contamination status of the Phoenix Place site, with respect to the proposed end use of the Phoenix Place Development, it is necessary to assess whether the Phoenix Place site could potentially be classified as ‘Contaminated Land’, as defined in Part IIA of the Environmental Protection Act 1990 and Contaminated Land Statutory Guidance 2012. This is assessed by the identification and assessment of potential pollutant linkages. The linkage between the potential sources and potential receptors identified needs to be established and evaluated.

To fall within this definition, it is necessary that, as a result of the condition of the land, substances may be present in, on or under the land such that:

- a) significant harm is being caused or there is a significant possibility of such harm being caused; or
- b) significant pollution of controlled waters is being caused, or there is significant possibility of such pollution being caused.

It should be noted that DEFRA has advised (Section 4, DEFRA Contaminated Land Statutory Guidance 2012) Local Authorities that land should not be designated as 'Contaminated Land' where:

- a) the relevant substance(s) are already present in controlled waters;
- b) entry into controlled waters of the substance(s) from land has ceased; and
- c) it is not likely that that further entry will take place.

These exclusions do not necessarily preclude regulatory action under the Environmental Permitting (England and Wales) Regulations 2010, which make it a criminal offence to cause or knowingly permit a water discharge of any poisonous, noxious or polluting matter to controlled waters. In England, under The Water Resources Act 1991 (Amendment) (England and Wales) Regulations 2009, a works notice may be served by the regulator requiring appropriate investigation and clean-up.

## **1.6 Constraints**

This report is produced under the terms of, and in accordance with Royal Mail Group, and may be relied upon in accordance with the terms and conditions of the Appointment.

The information contained in this PERA is based on a review of available historical, geological, and hydrogeological sources, consultation with the regulatory authorities and observations made during a walkover of the Phoenix Place site on 9 June 2016.

Waterman has endeavoured to assess all information provided to them during the preparation of this PERA, but makes no guarantees or warranties as to the accuracy or completeness of this information.

The scope of this PERA includes an assessment of the presence of asbestos containing materials in the ground but not within buildings, structures or below ground structures (basements, buried service ducts and the like).

The conclusions resulting from this PERA are not necessarily indicative of future conditions or operating practices at, or adjacent to, the Phoenix Place site.

## **2. Methodology**

This PERA has been undertaken in general accordance with the Model Procedures for Management of Land Contamination (Contaminated Land Report 11 – Environment Agency, September 2004).

The PERA is based on, and includes, the following:

- Collation of available documentary information;
- Site walkover undertaken on 9 June 2016;
- Hazard identification;
- Formulation of a preliminary Conceptual Model;
- Hazard assessment for the identification of potentially unacceptable risks; and
- Recommendations for further action.

### 3. Hazard Identification

#### 3.1 Site Description and Reconnaissance

During the walkover on 9 June 2016, the Phoenix Place site was used as a car park by staff at Royal Mail. Cars were parked in unmarked spaces set across the distinct levels, accessible by ramps. The car park surface comprised compacted fill material and hardstanding in poor condition. A number of small metal tracks were identifiable within the hardstanding and are likely associated with the historical industrial use of the Phoenix Place site.

Evidence of historical buildings was present across the Phoenix Place site, notably in the south-eastern part (Plot P1) with walls, metal tracks, and buttresses present. The southern corner of the Phoenix Place site is underlain by a series of vaults, which were inaccessible during the walkover. Observations from outside the vaults noted the presence of a series of rooms and extensive fly tipping, which included demolition material, wood and metal.

Anecdotal information from RMG management suggests a groundwater abstraction well is located towards the centre of Phoenix Place site, although this was not observed during the walkover. British Geological Survey (BGS) borehole records identify a series of boreholes founded within the London Clay Formation marked as wells on the plan; however, their use as groundwater abstraction wells has not been confirmed.

Potential contaminant sources identified on the Phoenix Place site during the walkover are detailed in Table 1 and a selection of photographs taken during the walkover are provided in Appendix B.

Table 1: Summary of Potentially Contaminative Activities on the Phoenix Place Site

Potential Issue	Description	Condition
Vehicle parking	Vehicle parking across the Phoenix Place site	Vehicles parked across the Phoenix Place site. Hardstanding, where present, was in poor condition, infiltration of contaminants into the underlying soil or groundwater is likely to be unrestricted.
Fly tipping	Fly tipping noted in vaults present	Material including wood, soil, metal and pipes were noted to have been fly tipped within vaults present in the southern corner.
Made ground	Made Ground across the Phoenix Place site	Made Ground exposed to infiltration.

The following Pollution, Prevention and Control licenses, discharge consents, licensed waste management facilities and registered radioactive substances are now covered by Environmental Permits:

- Integrated Pollution, Prevention and Controls (IPPC): Environmental Permit for a Part A(1) Activity;
- Local Authority IPPC (LA-IPPC): Environmental Permit for a Part A(2) Activity;
- Local Authority Pollution, Prevention and Controls (LAPPC): Environmental Permit for a Part B Activity;
- Licensed Waste Management Facilities: Environmental Permit for waste activities;
- Registered Radioactive Substances: Environmental Permit relating to radioactive substances;
- Discharge Consents: Environmental Permit for discharges to groundwater/surface water; and

The Envirocheck Report (see Appendix C) has not identified any Environmental Permits relevant to the Phoenix Place site.

### 3.1.1 Site Surroundings

A summary of the current land uses surrounding the Phoenix Place site is shown in Table 2.

Table 2: Summary of Surrounding Land Uses

Location	Description
North west	Residential properties
North east	Mount Pleasant Sorting Office and Calthorpe Street site
South east	Commercial and residential properties
South west	Commercial and residential properties

The Envirocheck Report obtained for the Phoenix Place site and included in Appendix C indicates that the following entries are within proximity to the Phoenix Place site:

- Six currently active Environmental Permits (formerly known as Local Authority Pollution Prevention and Controls) are located within 500m of the Phoenix Place site; the closest of which is a petrol station located 200m north-west;
- Twelve Environmental Permits for radioactive substances are located within 500m of the Phoenix Place site. The closest active Registered Radioactive Substances site is located 207m north-west and associated with the University College London;
- One contaminated land register entry has been identified within 1km of the Phoenix Place site. The entry is for 8 Duncan Terrace located 963m north-east of the Phoenix Place site. No further details were available at the time of this PERA.

There are no active or inactive Environmental Permits within 500m of the Phoenix Place site that relate to the following:

- Discharge Consents;
- Integrated Pollution Controls; or
- Enforcement and prohibition notices.

## 3.2 History

A review of recent Ordnance Survey (OS) extracts obtained from Landmark Information Group (see Appendix C) has been undertaken. A summary of relevant information is shown in Table 3 dating from 1851, although parts of the Phoenix Place site and surrounding area has been developed since the 1500s.

Table 3: Phoenix Place Site History

Source	Site	Surroundings
London 1851 (1:5,280)	Limited detail shown, although two buildings are shown on the north-eastern boundary adjacent to Phoenix Place (road).	Limited detail shown on the OS extract of the surrounding area.
London 1874-1875 (1:1,056)	Residential properties along the south-western boundary with Gough Street. Remainder of the Phoenix Place site comprises various <b>industrial works</b> , of these only a <b>cartridge manufacturer</b> and a <b>foundry</b> are denoted.	Surrounding area predominately comprises terraced residential properties, although the following notable uses are identified: <ul style="list-style-type: none"> <li>• <b>Percussion cap</b> and <b>cartridge factory</b> located 100m north-west;</li> <li>• <b>Builders yard</b> located 250m north-west;</li> <li>• <b>Coldbath Field Prison</b> located 10m east on the Calthorpe Street site;</li> <li>• <b>Timber yard</b> located 25m south-east.</li> <li>• <b>Wheel Works</b> located 250m south.</li> </ul> The underground Metropolitan line is present to the east of Farringdon Road.
London 1896 (1:1,056)	Central part of the Phoenix Place site is shown to be redeveloped, however, information denoting the building uses are not shown.	<b>Fire station</b> located 100m east. <b>Timber yard</b> located 200m north-west. <b>Timber yard</b> located 250m south-east. <b>Postal Telegraph Factory</b> and Post Office present on the Calthorpe Street site, located north-east of the Phoenix Place site.
London 1916 (1:2,500)	A number of terraced houses along Gough Street demolished. Foundry in the south-east corner of the Phoenix Place site identified as the <b>Phoenix Foundry</b> .	<b>Royal Free Hospital</b> located 150m north-west.
London 1922 (1:1,056)	Terraced houses in southern corner of the Phoenix Place site facing onto Gough Street demolished.	No significant change.
Aerial Photograph 1946-1949 (1:1,250)	<b>Industrial buildings</b> present notably in southern and central part of Phoenix Place site. <b>Chimney</b> shown towards the centre of the Phoenix Place site.	Surrounding area remains largely unchanged.
Ordnance Survey Plan 1952-1953 (1:1,1250)	The following industrial uses identified: <ul style="list-style-type: none"> <li>• <b>Four garages</b> located across the Phoenix Place site;</li> <li>• <b>Phoenix Foundry</b> in south eastern corner of the Phoenix Place site;</li> <li>• <b>Food factory</b> located towards the centre of the Phoenix Place site;</li> <li>• <b>Printing works</b> and <b>joinery works</b> in the northern part of the Phoenix Place site; and</li> <li>• Ruin in the south eastern corner of the Phoenix Place site likely as a result of bomb damage.</li> </ul>	<b>Printing ink factory</b> located 250m north-east. <b>Garage</b> located 25m south-west. <b>Engineering works</b> located 100m south-east. <b>Printing works</b> located 115m south-east. A number of ruins in the immediate surrounding area, likely as a result of bomb damage during World War II.

Source	Site	Surroundings
Additional SIMs 1965 (1:2,500)	Two <b>Garages</b> , one in the centre and one in the southern corner of Phoenix Place site demolished, likely as a result of bomb damage.	<b>Various works, depot</b> and a <b>large garage</b> located between 100 and 250m north-west of the Phoenix Place site.
Ordnance Survey Plan 1974 (1:1,1250)	<b>Various works</b> and <b>garages</b> located in the centre and southern part of the Phoenix Place site shown as demolished and disused.	No significant change.
Additional SIMs 1982-1989 (1:1,250)	No significant change.	<b>Fire station</b> located 125m south-east extended in size. A drill tower identifiable.
Additional SIMs 1989 (1,250)	No significant change.	No significant change.
Large Scale National Grid Data 1991 (1:1,250)	Mail Rail House present in centre of the Phoenix Place site, with the remainder of the Phoenix Place site shown as disused.	No significant change.
VectorMap Local 2016 (1:10,000)	Mail Rail House demolished.	No significant change.

\*Potentially contaminative uses are shown in Bold

GOAD fire insurance plans dating from 1927 to 1967 indicate the following potentially contaminative land uses in addition to those detailed in Table 3:

- Sunken petrol tank located in the northern part of the Phoenix Place site on the north-eastern boundary (1927);
- Sunken petrol tank located in the centre of the Phoenix Place site (1951);
- Furniture factory located in the south-east corner of the Phoenix Place site (1951);
- Sunken petrol tank located in the southern corner of the Phoenix Place site (1967); and
- Sunken petrol tank located midway along the north-eastern boundary of the Phoenix Place site (1967).

### 3.3 Previous Environmental Assessments

A Site Investigation was undertaken on the Phoenix Place site (and on the adjacent Calthorpe Street site) in 2005 by Geotechnics. A summary of this Site Investigation is provided in Geotechnics' factual report: 'Ground Investigation at Mount Pleasant Redevelopment' (report reference: PC051744, dated November 2005). A summary of the 2005 Site Investigation is given below, together with the soil and groundwater data from this Site Investigation, which has been compared against the latest screening criteria.

### 3.4 Geotechnics (2005)

The scope of the Site Investigation on the Calthorpe Street site, Phoenix Place site and within the adjacent Sorting Office is shown on Figure A5 of Appendix A and comprised;

- Eleven boreholes to maximum depths of between 20.0mbgl and 45.0mbgl (BH101-111). Rotary core follow on was employed at BH108, and BH110;
- Thirteen trial pits (TP1-TP13) to depths between 2.50mbgl and 4.50mbgl;
- Five window sample boreholes (WS309, WS312, WS315, WS317 and WS318) to a maximum depth of 4.00mbgl;
- Ground gas and groundwater level monitoring visits on four occasions within boreholes installed with ground gas and groundwater monitoring wells;
- In-situ and ex-situ geotechnical testing, and ex-situ contamination testing.
- Exploratory holes located on the Phoenix Place site are BH101-104, BH111, TP301-308 and TP310.

A summary of the geology recorded during the 2005 Site Investigation has been included in Table 7 of this PERA.

#### Human Health

Recovered soil samples were tested in a laboratory for a range of determinands, including, metals, Polycyclic Aromatic Hydrocarbons (PAH), banded Total Petroleum Hydrocarbons (TPH), asbestos and Volatile Organic Compounds (VOC).

Basements on the Phoenix Place site would be used for residential and commercial uses, RMG staff car parking, cycle storage, plant rooms and waste storage. Soil samples from exploratory holes progressed on the Phoenix Place site have been assessed against the residential land use without plant uptake Generic Assessment Criteria (GAC) presented in Appendix F. This is considered a highly conservative assessment. Contaminants in exceedance of the GAC for a residential land use without plant uptake are detailed in Table 4.

Table 4: Contaminant Exceedances across the Phoenix Place Site

Contaminant	Residential Land Use without Plant Uptake GAC (mg/kg)	Exploratory Location (Concentration mg/kg)	
Lead	310	BH101-0.5mbgl (1,100)	TP302-0.9mbgl (650)
		BH103-0.25mbgl (1,200)	TP304-1.6mbgl (1,100)
		BH103-1.5mbgl (590)	TP305-1.1mbgl (800)
		BH104-0.5mbgl (1,000)	TP306-2.5mbgl (480)
		BH111-0.25mbgl (1,100)	TP307-1.6mbgl (500)
		BH111-1.0mbgl (1,100)	TP307-2.2mbgl (850)
		BH102-2.5mbgl (530)	TP308-0.8mbgl (520)
		TP303-0.4mbgl (2,000)	TP308-2.2mbgl (350)
		TP301-0.8mbgl (730)	
Mercury	1.2	BH101-0.5mbgl (5.2)	TP302-0.9mbgl (5.1)
		BH103-0.25mbgl (1.9)	TP304-1.6mbgl (7.9)
		BH103-1.5mbgl (3.3)	TP305-1.1mbgl (1.7)
		BH104-0.5mbgl (12.0)	TP306-2.5mbgl (4.0)
		BH111-0.25mbgl (3.7, 2.5)	TP307-1.6mbgl (1.5)
		BH102-0.3mbgl (2.4)	TP307-2.2mbgl (1.5)
		TP303-0.4mbgl (22)	TP308-0.8mbgl (2.8)
		TP301-0.8mbgl (71)	TP308-2.2mbgl (2.7)
Benzo(a)pyrene	3.2	BH104-0.5mbgl (5.0)	
		BH111-0.25mbgl (7.1)	
Dibenzo(a,h)anthracene	0.31	BH111-0.25mbgl (0.50)	
Benzo(b)fluoranthene	3.9	BH111-0.25mbgl (4.3)	

Following completion of the Phoenix Place Development, Made Ground would be removed during the construction of the basements. In areas of basements and hardstanding, the pollutant pathway linkages to future users would be broken. However, in areas of soft landscaping, active pollutant pathways may be present and therefore a suitable for use capping layer would be required to break the pollutant pathway linkage to human receptors.

#### Controlled Waters

Groundwater levels within the Hackney Gravel Member and the deposits underlying the London Clay Formation recorded during the 2005 Site Investigation are detailed in Table 5. For a robust assessment of the groundwater flow, the groundwater levels from boreholes installed on the Calthorpe Street site have been included.

Table 5: Groundwater Levels within the Hackney Gravel Member

Borehole	Location	Monitoring Wells Installed within the Hackney Gravel Member	
		Highest Groundwater Level (mAOD)	Lowest Groundwater Level (mAOD)
BH101	Phoenix Place site	14.70	14.60
BH102	Phoenix Place site	12.27	12.06
BH103	Phoenix Place site	13.40	12.98
BH104	Phoenix Place site	12.26	12.10
BH105	Calthorpe Street site	13.02	12.87
BH106	Calthorpe Street site	11.19	10.99
BH107	Calthorpe Street site	15.74	15.58
BH109	Calthorpe Street site	9.96	9.70
BH111	Phoenix Place site	9.60	8.91

Comparison of the recorded groundwater levels and the location of the boreholes across the Calthorpe Street site and Phoenix Place site shows a convergence of groundwater within the Hackney Gravel Member towards the Fleet River Sewer, located beneath Phoenix Place (road).

Groundwater within the Lambeth Group Deposits, Thanet Sand Formation (Secondary A Aquifers) and Upper Chalk Formation (Principal Aquifer) was artesian during the groundwater monitoring of the 2005 Site Investigation.

Groundwater samples were recovered on four occasions from boreholes installed on the Phoenix Place site. Laboratory testing for metals, PAH, TPH and VOC were undertaken on two occasions within BH101, three occasions within BH104, and two occasions within BH102 and BH103. Groundwater samples recovered from the Hackney Gravel Member have been assessed against the Environment Agency derived Environmental Quality Standards (EQS) where possible. Groundwater samples recovered from the Lambeth Group, Thanet Sand Formation, and Upper Chalk Formation have been assessed against the Drinking Water Standards (DWS) where possible.

The groundwater samples recovered on the 15 August and 7 November 2005 do not differentiate between which well installation within the borehole the groundwater sample was recovered from. Laboratory results on these two occasions have therefore been assessed against the most conservative DWS or Environment Agency derived EQS. Contaminants in excess of the relevant EQS (River Terrace Deposits) or DWS (Lambeth Group, Thanet Sand Formation, and Upper Chalk Formation) have not been recorded within the groundwater samples recovered.

PAH and TPH were not speciated, preventing their comparison against relevant EQS or DWS. Total TPH was recorded below the laboratory limit of detection ( $<10\mu\text{g/l}$ ). Total PAH was generally recorded below  $1.0\mu\text{g/l}$ .

#### Ground Gas

Ground gas was monitored on six occasions as part of the 2005 Site Investigation, although this did not include vapour monitoring. Peak oxygen, methane, carbon dioxide and flow levels are summarised in Table 6. Ground gas monitoring undertaken on monitoring wells installed within the Calthorpe Street site have been included to provide further confidence to the assessment.

Table 6: Geotechnics Ground Gas Monitoring Results

Borehole	Location	Stratum	Oxygen (%)	Methane (%)	Carbon Dioxide (%)	Flow (l/hr)
BH101	Phoenix Place site	Made Ground	18.4	<0.1	1.3	-0.01
BH101	Phoenix Place site	London Clay Formation	1.90	<0.1	3.6	-0.01
BH102	Phoenix Place site	Made Ground	18.70	<0.1	0.80	-0.01
BH103	Phoenix Place site	Made Ground	19.10	<0.1	0.80	-0.01
BH104	Phoenix Place site	Made Ground	20.4	<0.1	0.10	0.02
BH111	Phoenix Place site	Thanet Sand Formation/Upper Chalk Formation	0.20	<0.1	3.10	-6.04
BH111	Phoenix Place site	Made Ground	19.80	<0.1	0.20	<0.01
BH105	Calthorpe Street site	Made Ground	1.60	<0.10	0.30	-0.01
BH105	Calthorpe Street site	Lambeth Group	17.10	<0.10	2.40	-0.01
BH106	Calthorpe Street site	Thanet Sand Formation	20.00	<0.10	0.20	-0.01
BH106	Calthorpe Street site	Made Ground	19.6	<0.10	0.30	-0.01
BH107	Calthorpe Street site	Made Ground	17.80	<0.10	2.20	-0.01
BH107	Calthorpe Street site	Upper Chalk Formation	<0.10	<0.10	4.30	0.10
BH108	Calthorpe Street site	Lambeth Group	<0.10	<0.10	0.40	<0.01
BH108	Calthorpe Street site	Upper Chalk Formation	16.40	<0.10	1.40	<0.01
BH109	Calthorpe Street site	Made Ground	18.90	<0.10	0.90	<0.01
BH109	Calthorpe Street site	London Clay Formation	18.80	<0.10	0.80	<0.01

Based on the peak methane, carbon dioxide concentrations and flow recorded during the 2005 Site Investigation, the ground gas regime on the Phoenix Place site can be classified as Characteristic Situation 1, whereby no ground gas protection measures would be required.

### 3.5 Geology

Geology of the Phoenix Place site has been established from historical boreholes progressed during the 2005 Site Investigation, from the BGS maps and historical borehole logs. A summary of the geology has been provided in Table 7.

Table 7: Phoenix Place Site Geology

Stratum	Area Covered	Estimated Thickness	Typical Description
Made ground	Entire Phoenix Place site	1.5m to 5.2m	Clayey sandy gravelly material with fragments of brick, concrete, oyster shells, ceramic, ash,
Alluvium	The former courses of the River Fleet	1m to 2m	Sandy silty clay, with organic matter present
Hackney Gravel Member	Majority of Phoenix Place site	0.9m to 1.2m	Sand gravels with rare clay.
London Clay Formation	Entire Phoenix Place site	5.4m to 9.4m	Silty clay
Lambeth Group	Entire Phoenix Place site	15.5m to 15.8m	Mottled sandy Clay containing shell fragments.
Thanet Sand Formation	Entire Phoenix Place site	7.0m	Fine grained sand with rare clay
Upper Chalk Formation	Entire Phoenix Place site	>13.0m (not proven)	White chalk with flints

The former Fleet River and associated floodplains were historically present on the eastern part of the Phoenix Place site. In this area, there is the potential for Alluvium to be encountered. In localised areas, the Hackney Gravel Member has been replaced by Made Ground.

#### 3.5.1 Ground Stability

The ground stability risks associated with the Phoenix Place site, as reported in the Envirocheck Report, are detailed in Table 8. The Phoenix Place site is not in an area that could be affected by coal mining activity.

Table 8: Ground Stability Risk Classification

Ground Stability Risk	Risk Classification
Collapsible Ground	Very Low
Compressible Ground	Moderate
Ground Dissolution	No Hazard
Landslide	Very low
Running Sand	Very Low
Shrinking or Swelling Clay	No Hazard

### 3.5.2 Ground Gas and Vapour

According to information from Public Health England, the Phoenix Place site is not located in an area of elevated radon gas levels (a naturally occurring gas). Correspondingly, radon protection measures are not required in the development of new buildings or extensions. However, there are discussions within the industry that radon protection measures should be considered in all new buildings whether located in a radon affected area or not. This approach should be confirmed with the Building Control Officer.

There are no active registered landfills within 500m of the Phoenix Place site. One historical landfill (1975-1978) is located 480m north-east of the Phoenix Place site (Rosoman Street/Skinner Street). The landfill received predominately inert waste.

Sources of ground gas and vapour on the Phoenix Place site include the thick deposits of Made Ground, organic material associated with the Fleet River Sewer and underground petrol tanks historically present on the Phoenix Place site. Ground gas monitoring undertaken by Geotechnics in 2005 recorded low levels of carbon dioxide and methane, as reported above.

## 3.6 Controlled Waters

### 3.6.1 Surface Waters

The River Thames is located approximately 1.6km south and Regents Canal is located 1.1km north of the Phoenix Place site. The culverted Fleet River Sewer flows beneath Phoenix Place (road) in a southerly direction towards the River Thames. The Fleet River Sewer outfalls in the River Thames and therefore is considered a viable pollutant migration pathway for contaminants to reach the River Thames.

There are no recorded Environmental Permits for discharges to controlled waters within 500m of the Phoenix Place site.

### 3.6.2 Groundwater

Based on information on the Environment Agency website and detailed within the Envirocheck Report, the geological deposits beneath the Phoenix Place site are classed as having the hydrogeological properties identified in Table 9.

Table 9: Summary of Hydrogeological Properties of the Main Geological Strata

Stratum	Environment Agency Classification	Hydrogeological Significance
Made Ground	Unproductive Strata	Negligible significance for water supply or river base flow
Alluvium	Secondary A Aquifer	Permeable layers capable of supporting water supplies at a local rather than strategic scale.
Hackney Gravels	Secondary A Aquifer	Permeable layers capable of supporting water supplies at a local rather than strategic scale.
London Clay Formation	Unproductive Strata	Low permeability with negligible significance for water supply or river base flow.
Lambeth Group	Secondary A Aquifer	Permeable layers capable of supporting water supplies at a local rather than strategic scale.
Thanet Sand Formation	Secondary A Aquifer	Permeable layers capable of supporting water supplies at a local rather than strategic scale.
Upper Chalk Formation	Principal Aquifer	High intergranular and / or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and / or river base flow on a strategic scale.

In areas of the Phoenix Place site in which the Made Ground has replaced the Hackney Gravel Member, the Secondary A Aquifer will be within the Made Ground.

The Phoenix Place site is not located within a groundwater Source Protection Zone (SPZ).

Groundwater flow within the River Terrace Deposits is likely to flow south-east towards the culverted Fleet River Sewer beneath Phoenix Place (road).

One groundwater abstraction borehole located within the Upper Chalk Formation is recorded within 1km of the Phoenix Place site. The groundwater abstraction point, which is located 517m north-east, is operated by Thames Water as a potable water supply and is considered likely to influence groundwater flow within the Upper Chalk Formation.

The nearest pollution incident to controlled waters related to the release of 'fire water/foam' 676m to the south west. The incident was categorised by the Environment Agency as a 'Category 3 – Minor Incident'. Given the incident was south-west of the Phoenix Place site and the anticipated south/south-west groundwater flow, the potential contaminants released are considered unlikely to have migrated on to the Phoenix Place site.

Anecdotal information from RMG management suggests a groundwater abstraction well is located towards the centre of Phoenix Place site, although this was not observed during the walkover. British Geological Survey (BGS) borehole records identify a series of boreholes founded within the London Clay Formation marked as wells on the plan; however, their use as groundwater abstraction wells cannot be confirmed.

### 3.7 Consultations

The agencies and individuals which have been contacted and/or their records reviewed to inform this PERA are listed in Table 10.

Table 10: List of Parties Consulted during this Study

Organisation	Response
<b>London Borough of Camden</b>	
Planning	On-line planning history reviewed.
Building Control	Response received 13/06/2016
Environmental Health	Response received 13/07/2016
<b>London Borough of Islington</b>	
	On-line planning history reviewed.
<b>London Fire and Emergency Planning Agency</b>	
	Response received 10/01/2013

#### 3.7.1 Environmental Health

The London Borough of Camden confirmed the Phoenix Place site has not been determined as contaminated land under Part IIA of the Environmental Protection Act 1990, and has been identified as a medium to very high risk priority for inspection. However, a search of the records identified a number of historical industrial land uses of plausible concern, including a foundry, works, printers, garage, joinery, and unknown industrial use. According to the contaminated land risk categorisation, land uses detailed above, is inherently considered to present a possible risk of contamination. It is conservatively considered likely that such land would exhibit areas of elevated contamination levels. However, the Phoenix Place site is not being investigated under the Contaminated Land regime. The London Borough of Camden has no evidence that confirms there are contamination issues, other than potentially contaminative past uses on the Phoenix Place site. Additional information supplied by the London borough of Camden confirms:

- The Council holds no information on pollution incidents in the area;
- There are no historical landfills within 250m of the Phoenix Place site; and
- The Council has no information about the extent of Made Ground, however, soil profile within the administrative boundary of the London Borough of Camden tends to exhibit high levels of lead (BGS data).

#### 3.7.2 Planning Department

The online planning portals of the London Borough of Islington and London Borough of Camden were reviewed in order to determine if any planning consents with potentially contaminative elements were granted historically for the Phoenix Place site or immediate surrounding area.

Potentially contaminative activities beyond the known uses recorded in Table 3 were not noted from the information contained on the planning portals.

### 3.7.3 Building Control Department

Information has been requested from Building Control Department. LBC confirmed that they did not hold building control records for the Phoenix Place site.

### 3.7.4 London Fire and Emergency Planning Agency

Information has been requested from the London Fire and Emergency Planning Agency. In their response, they identified petroleum records relating to Phoenix Place WC1. Further information as to the specific location was not given, however, it is considered likely the Phoenix Place WC1 record relates directly to the Phoenix Place site.

The London Fire and Emergency Planning Authority recorded the presence of three tanks and provided information where present on their status:

- 7 & 8 Phoenix Place – 5,682 litre petrol tank (water filled);
- 12 Phoenix Place – 13,688 litre petrol tank (water filled); and
- 13 & 14 Phoenix Place – 9,092 litre diesel tank (status unknown).

Further historical information on the tanks is not available and the London Fire and Emergency Planning Authority could not confirm the current status, location or dates of water filling of the above mentioned tanks.

## 4. Hazard Assessment and Preliminary Conceptual Model

### 4.1 Contaminants of Concern

Contaminants of concern identified above are summarised in Table 11.

Table 11: Contaminants of Concern

Source	Associated Contaminants
<b>On-site (current)</b>	
Made Ground	Metals, PAH, TPH, Asbestos, SVOC, VOC
Car parking	TPH
Fly tipping	Asbestos, PAH, TPH, Metals
<b>On-site (historical)</b>	
Garages and associated fuel tanks	TPH, Phenols, BTEX, asbestos, PAH
Print works	Chlorinated solvents, TPH, PAH, Metals, VOC, SVOC
Foundry	Metals, PAH, TPH, Asbestos
Food factory	Metals, PAH, TPH, Asbestos, SVOC, VOC
Post Office and Telegraph Factory	Metals, PAH, TPH, Asbestos, SVOC, VOC
Cartridge manufacturer	Metals, TPH, Asbestos, PAH
<b>Off-site (historical)</b>	
Garages	TPH, VOC, SVOC, Phenols, BTEX
Foundry	PAH, Metals
Made Ground	Metals, PAH, TPH, Asbestos, SVOC, VOC
Printers and Printing Ink Factory	Chlorinated solvents, TPH, PAH, Metals, VOC, SVOC
Timber Yard	TPH
<b>Off-site (current)</b>	
Made Ground	Metals, PAH, TPH, Asbestos, SVOC, VOC

The preliminary Conceptual Model for the Phoenix Place site, including Phoenix Place Development Plot P1 and Plot P2 is presented in Table 12 and graphically in Figure A4 of Appendix A. The risk rating included in Table 12 has been assessed qualitatively using the criteria given in Appendix D and the potential receptors identified using the criteria given in Appendix E.

Table 12: Preliminary Conceptual Model for the Phoenix Place Site

Receptor	Potential Sources	Pathways	Risk	Justification / Mitigation	Residual Risk
<b>Human Health</b>					
Existing Site Users	Contaminants within the underlying Made Ground and groundwater	Dermal contact, ingestion, and inhalation	Low	The Phoenix Place site is currently used as car parking for RMG staff. Ground conditions comprise a mix of compacted soils and hardstanding in poor condition. Visitors have a short residence time on the Phoenix Place site and are not considered to be at significant risk of harm from contaminants present within the underlying soils and groundwater.	Low
	Ground gas and vapours from Site sources (Made Ground, Alluvium, compromised fuel tanks if present).	Migration to and accumulation within confined spaces	Low	Ground gas monitoring undertaken by Geotechnics in 2005 classified the ground gas regime of the Phoenix Place site as Characteristic Situation 1, whereby no ground gas protection measures would be required. The vapour risk to current users is considered to be low in view of the nature and use of the Phoenix Place site.	Low
Future Site Users	Contaminants within the Made ground and underlying groundwater	Dermal Contact, ingestion, and inhalation	Low	Contaminants were recorded within the Made Ground during the 2005 Site Investigation. The presence of buildings and hardstanding of the Phoenix Place Development would prevent pollutant pathway linkages. Areas of soft landscaping would use validated imported material suitable for its intended use and would be located above basements, therefore breaking the pollutant linkage. A Site Investigation will quantify the contamination status of the underlying deposits and groundwater and, where possible, identify the presence of historical fuel tanks, if present.	Low
	Ground gas and vapours originating from on-site sources (Made Ground, alluvial deposits, compromised fuel tanks if present)	Migration to and accumulation within confined spaces	Low	Ground gas monitoring undertaken by Geotechnics in 2005 classified the ground gas regime of the Phoenix Place site as Characteristic Situation 1. Vapour monitoring was not undertaken. The proposed basement used for car parking, plant rooms, residential and commercial uses are likely to have high ventilation rates reducing the potential for ground gases and vapours to accumulate to unacceptable levels.	Low

Receptor	Potential Sources	Pathways	Risk	Justification / Mitigation	Residual Risk
				<p>Within areas of the Phoenix Place site in which residential uses are present at ground floor and within basements, ventilation rates are likely to be lower. Potential is therefore present for the accumulation of ground gases and vapours to unacceptable levels.</p> <p>Ground gas and vapour monitoring undertaken as part of the Site Investigation will determine the ground gas regime. Appropriate mitigation measures compliant with BS8485 would be implemented, if required.</p>	
Off-site residents	Contaminants within the Made Ground on-site	Lateral migration off-site via wind entrainment, leading to direct contact, and inhalation	Low	<p>Contaminants have been recorded within the Made Ground during the 2005 Site Investigation and further contamination is possibly present given the historical uses of the Phoenix Place site. A Site Investigation would determine the contamination status of the Phoenix Place site.</p> <p>Soft landscaping within the surrounding area is limited, decreasing the potential for off-site receptors to come into contact with contaminants. Any exposure to contaminated dust would be short term and unlikely to significantly affect human health.</p> <p>During construction, good working practices for dust suppression (as set out in the Construction Environmental Management Plan) should be employed to limit dust migration, where practicably possible.</p>	Low
Construction Workers	Organic and inorganic contaminants within the Made Ground and groundwater	Direct contact, ingestion and inhalation	Medium	<p>Contaminants have been recorded within the Made Ground during the 2005 Site Investigation. During construction, workers would come into direct contact with the Made Ground and groundwater.</p> <p>Construction workers should wear the appropriate PPE, adhere to good practice hygiene and safety measures, the Confined Space Regulations 1997, and the Control of Asbestos Regulations 2012.</p>	Low
	Ground gas and vapours originating from on-site sources (Made Ground, alluvial deposits, compromised fuel tanks if present)	Migration to and accumulation within confined spaces	Medium	<p>Potential is present for a vapours to exist on the Phoenix Place site. During construction, workers may be exposed to vapour within confined spaces.</p> <p>Construction workers should avoid entering excavations. If entry cannot be avoided, a risk assessment should be undertaken with PPE and RPE used, where appropriate, and work done in-line with the Confined Space Entry Regulations 1997.</p>	Low

Receptor	Potential Sources	Pathways	Risk	Justification / Mitigation	Residual Risk
<b>Property</b>					
On site structures	Determinands within the underlying soil and groundwater	Chemical attack on buried foundations and services	Medium	<p>Following completion of the Phoenix Place Development, foundations and services would be in contact with the underlying soils and groundwater. If necessary mitigation measures such as the use of sulphate resistant concrete and appropriate potable water pipes should be used.</p> <p>A Site Investigation, which includes the testing of soils and groundwater, is required to determine the specification of buried foundations and services.</p>	Low
<b>Controlled Waters</b>					
River Thames	Made Ground, fuel tanks if present, print works, car parking	Migration via the culverted Fleet River Sewer, which outfalls into the River Thames	Low	<p>The River Thames is located 1.6km from the Phoenix Place site. Contaminants originating from the Phoenix Place site are likely to have naturally attenuated prior to reaching the River Thames when migrating through the Secondary A Aquifer within the Hackney Gravel Formation.</p> <p>The culverted Fleet River Sewer, which outfalls into the River Thames, is considered to be a viable pathway for contaminants originating from the Phoenix Place site. Widespread contamination was not recorded within the Secondary A Aquifer located within the Hackney Gravel Member during the 2005 Site Investigation indicating contaminants are unlikely to have migrated into the Fleet River Sewer and subsequently the River Thames.</p> <p>As part of a Site Investigation, groundwater samples should be recovered from the Hackney Gravel Member to determine the Secondary A Aquifer's contamination status and allow a qualitative assessment to be undertaken of the potential for contamination to reach the River Thames via the Fleet River Sewer pathway.</p>	Low
Secondary A Aquifer within the Hackney Gravel Formation	Made Ground, fuel tanks if present, print works, car parking	Vertical migration into the unconfined aquifer from the Made Ground.	Low	Gross contamination has not been identified within the Secondary A Aquifer from groundwater samples recovered from the 2005 Site Investigation. Following completion of the Phoenix Place Development, the Phoenix Place site would predominately be covered in hardstanding, restricting the leaching of contaminants within the Made Ground.	Low

Receptor	Potential Sources	Pathways	Risk	Justification / Mitigation	Residual Risk
				As part of a Site Investigation, the recovery of samples from the Secondary A Aquifer within the Hackney Gravel Formation will determine the contamination status. Appropriate remediation measures would be undertaken, if necessary.	
Secondary A Aquifer within Lambeth Group and Thanet Sand Formation, Principal Aquifer within Upper Chalk Formation	Made Ground, fuel tanks if present, print works, car parking	Preferential pathways created during piling. Potential groundwater abstraction well founded within the Upper Chalk Formation	Low	<p>The deeper aquifers are overlain by 5.4m to 9.4m of London Clay Formation, which is considered likely to act as an aquiclude, preventing the vertical migration of contaminants within the overlying Secondary A Aquifer to the deeper strata. Groundwater samples recovered from the Upper Chalk Formation during the 2005 Site Investigation did not record contaminant exceedances.</p> <p>Viable pathways may be created during construction through piles penetrating the London Clay Formation and from the uncovering of historical abstraction wells, if present.</p> <p>A FWRA should be undertaken should piles penetrate the London Clay Formation. The FWRA would outline the mitigation measures required to prevent the creation of preferential pathways.</p> <p>The validity of the presence of an historical groundwater abstraction well should be determined. Should an abstraction well(s) be present and founded below the London Clay Formation, measures should be taken to appropriately decommission the groundwater abstraction well, if necessary.</p>	Low

## 5. Conclusions

Given the end land uses proposed as part of the Phoenix Place Development, the contamination status of the soils and groundwater recorded during the 2005 Site Investigation and the known current and historical contamination sources, the overall risk rating of the Phoenix Place site is classified as **Medium**.

The recommendations of this PERA outline preliminary remedial and mitigation measures that require confirmation through an additional Site Investigation. However, once successfully implemented the risks are anticipated to be **Low**. Therefore, it is unlikely that the Phoenix Place site would be capable of being classified as Contaminated Land under Part IIA of the Environmental Protection Act 1990; thus meeting the requirements of paragraphs 120 to 122 of the National Planning Policy Framework.

## 6. Recommendations

The recommendations below outline preliminary remedial and mitigation measures that require confirmation through an additional Site Investigation on the Phoenix Place site. Based on the findings reported above, the following is recommended for the Phoenix Place site in relation to Plot P1 and Plot P2:

- A Site Investigation to establish the underlying ground conditions, contamination status of the soils, the Secondary A Aquifer within the Hackney Gravel Member, together with the ground gas and vapour regime;
- Based upon the results of the Site Investigation, a GQRA should be prepared encompassing Phoenix Place Development Plot P1 and Plot P2, in which the pollutant pathway linkages are quantified and assessed;
- A Remediation Strategy encompassing Phoenix Place Development (Plot P1 and Plot P2) should be prepared detailing the remedial strategy required to prevent the active pollutant pathway linkages identified from the GQRA;
- Following completion of the Sections, Validation Reports encompassing Phoenix Place Development Plot P1 and Plot P2 should be prepared, detailing the remedial measures taken and confirming all active pollutant pathways have been mitigated; and
- Since piles are considered likely to penetrate the London Clay Formation, FWRA should be prepared for the Sections, encompassing the Phoenix Place Development Plot P1 and Plot P2 and details the required measures to prevent preferential pathways.

Actions required prior to, and during construction are as follows;

- The validity and status of the groundwater abstraction well on the Phoenix Place site should be determined prior to construction works. If located, the well should be decommissioned in accordance with Environment Agency guidance;
- Following completion of the Site Investigation, boreholes progressed and installed below the London Clay Formation (including any historical wells discovered) should be appropriately decommissioned so as not to act as a preferential pathway in the future;
- A CEMP should be prepared detailing the measures for managing waste/stockpiling during construction and techniques for suppressing dust;
- As part of the Phoenix Place Development, Made Ground would be removed. A PWCA should be undertaken prior to the removal of material to determine the most appropriate disposal options;
- The Phoenix Place site is considered to be at risk from UXO. Measures recommended within the appropriate UXO reports should be followed throughout the investigatory and construction phases;
- During construction, potentially contaminative substances should be stored and handled in accordance with the COSHH Regulations 2002 to prevent fugitive emissions migrating to the Made Ground and underlying groundwater;
- Construction workers should wear the appropriate PPE, adhere to good practice hygiene and safety measures, the Confined Space Regulations 1997 and the Control of Asbestos Regulations 2012; and
- Construction workers should avoid entering excavations. If entry cannot be avoided, a risk assessment should be undertaken with PPE and RPE used where appropriate and in-line with the Confined Space Entry Regulations 1997.

## GLOSSARY

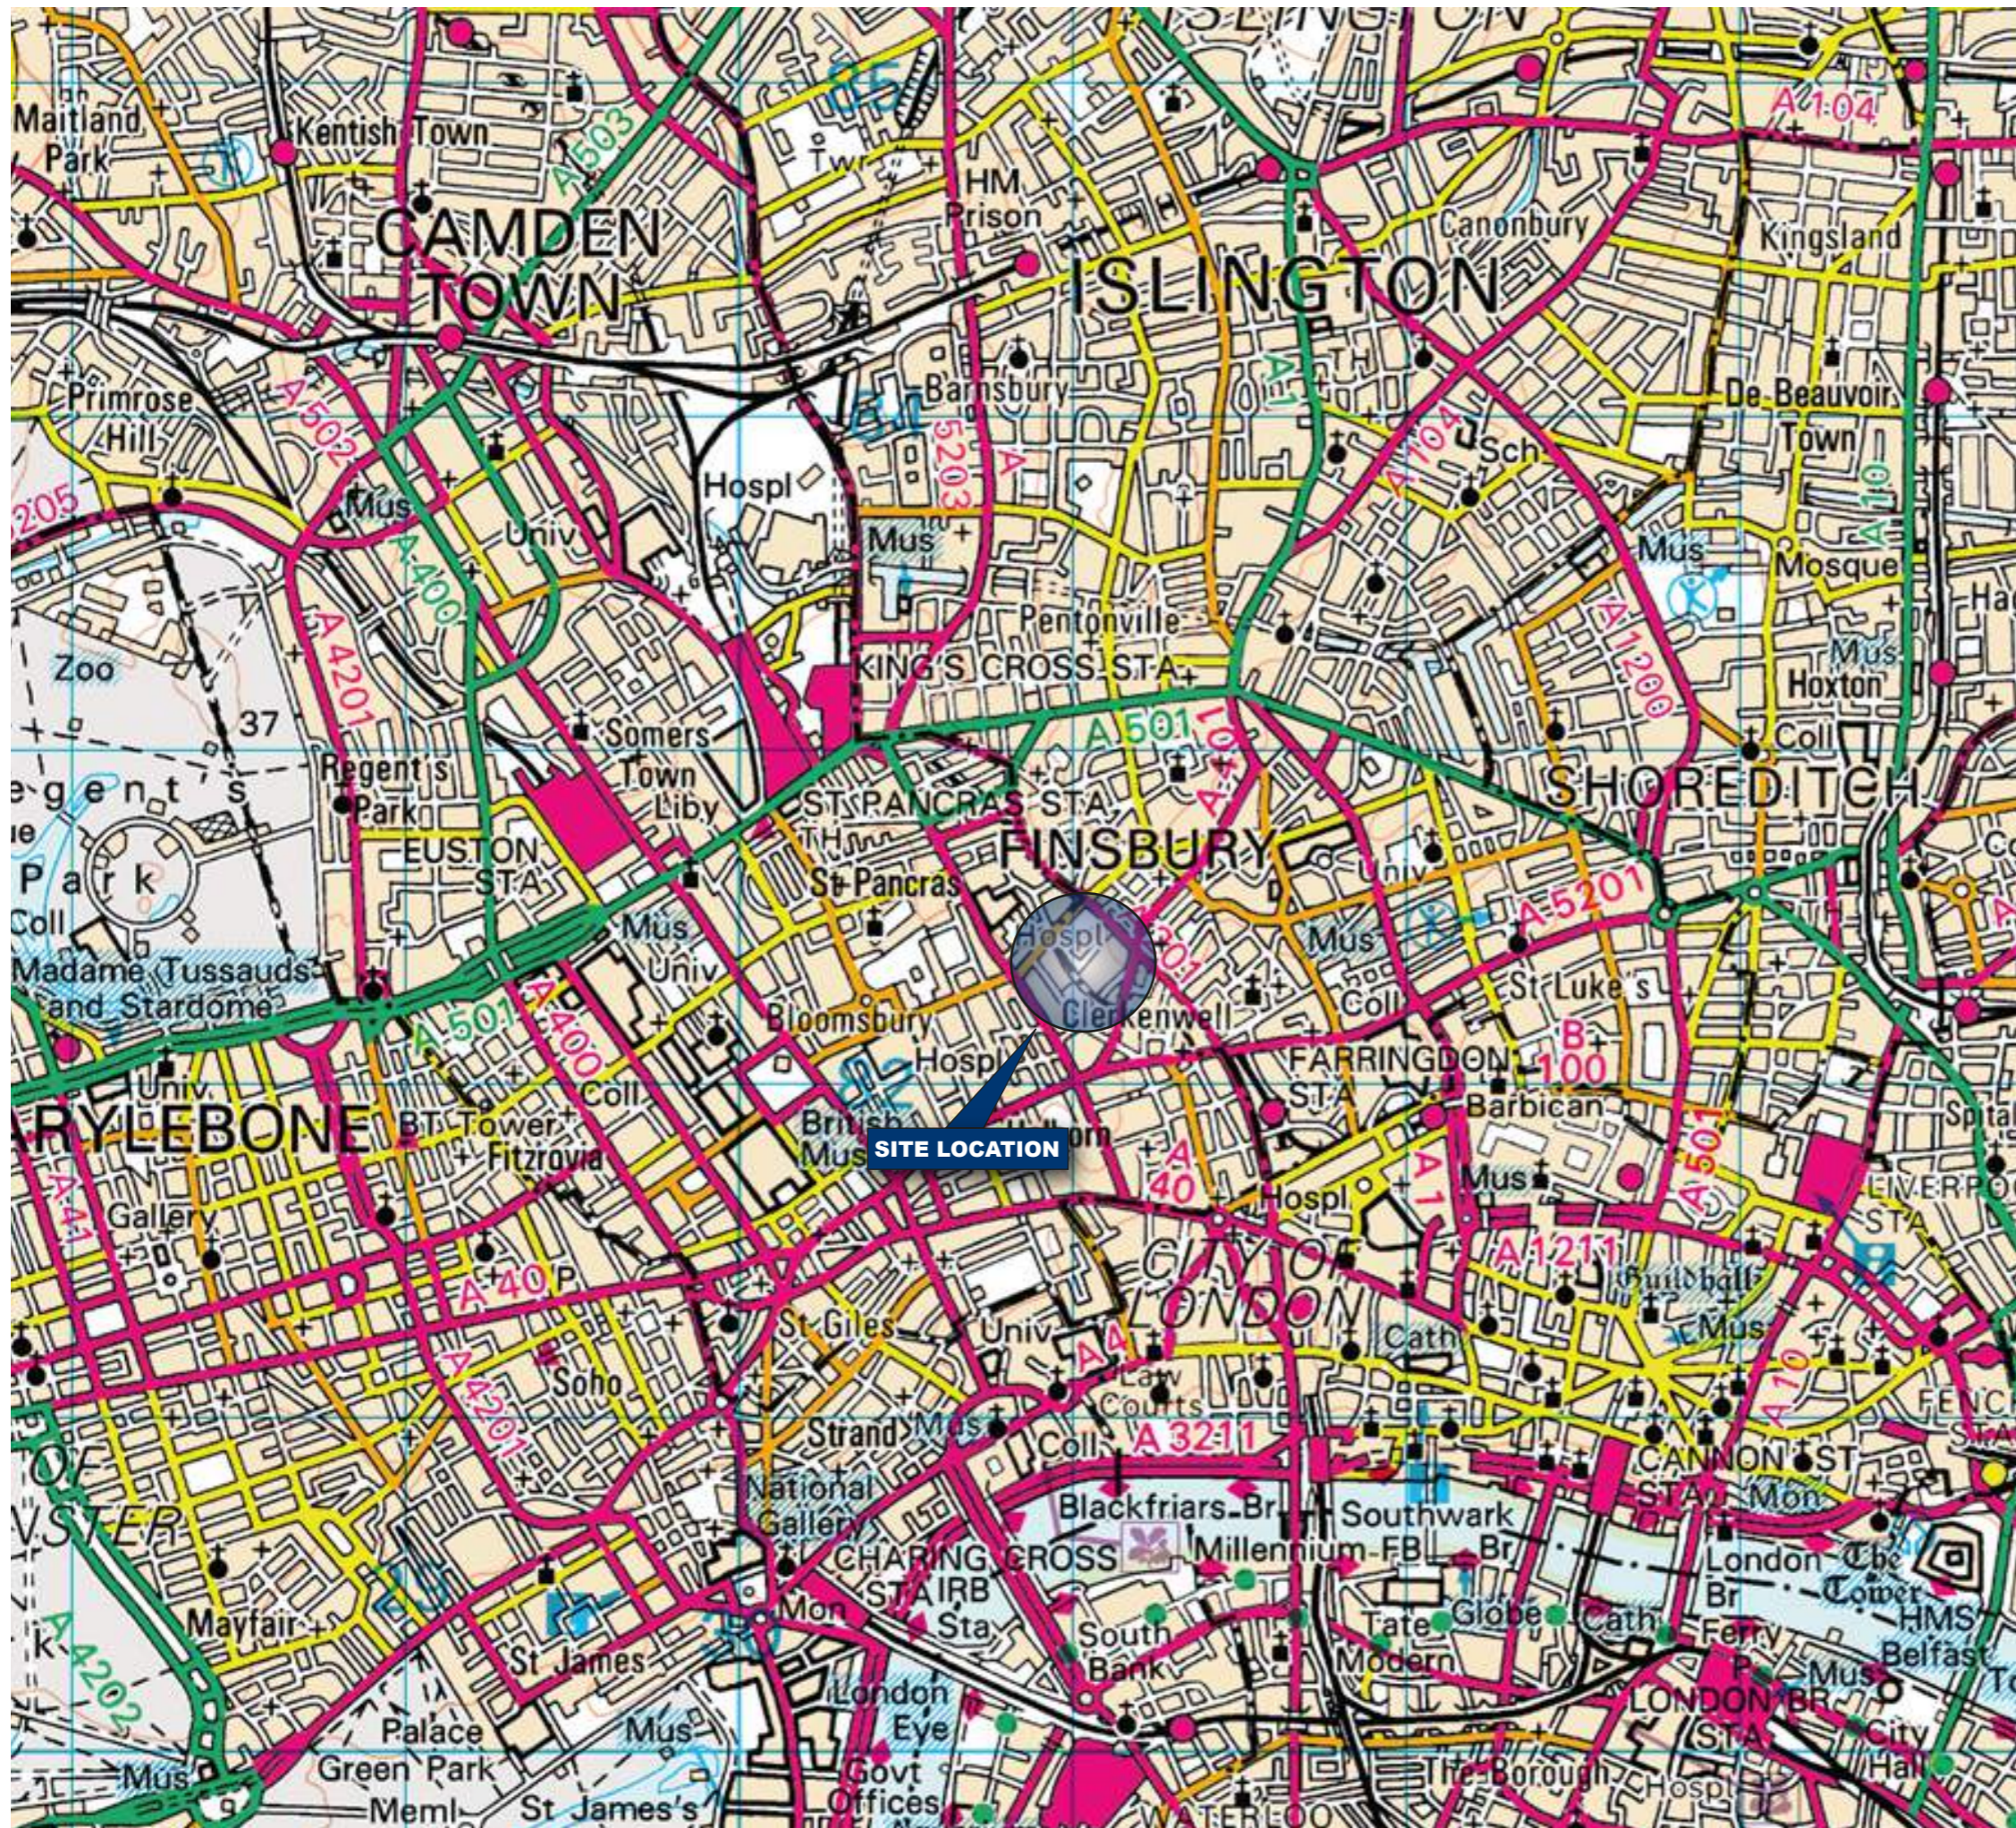

For the purpose of this report, the following terms and definitions apply (see BS 10175:2001).

Accuracy	Level of agreement between true value and observed value.
Conceptual Exposure model	<p>Textual and or schematic hypothesis of the nature and sources of contamination, potential migration pathways (including description of the ground and groundwater) and potential receptors, developed on the basis of the information from the preliminary investigation and refined during subsequent phases of investigation and which is an essential part of the risk assessment process.</p> <p><b>Note 1:</b> The conceptual exposure model is initially derived from the information obtained by the preliminary investigation. This conceptual model is used to focus subsequent investigations, where these are considered to be necessary, in order to meet the objectives of the investigations and the risk assessment. The results of the field investigation can provide additional data that can be used to further refine the conceptual model.</p>
Contamination	<p>Presence of a substance which is in, on or under land, and which has <u>the potential</u> to cause significant harm or to cause significant pollution of controlled water.</p> <p><b>Note 1:</b> There is no assumption in this definition that harm results from the presence of the contamination.</p> <p><b>Note 2:</b> Naturally enhanced concentrations of harmful substances can fall within this definition of contamination.</p> <p><b>Note 3:</b> Contamination may relate to soils, groundwater or ground gas.</p>
Controlled water	<p>Inland freshwater (any lake, pond or watercourse above the freshwater limit), water contained in underground strata and any coastal water between the limit of highest tide or the freshwater line to the three mile limit of territorial waters.</p> <p><b>Note 1:</b> See Section 104 of The Water Resources Act 1991.</p>
Harm	Adverse effect on the health of living organisms, or other interference with ecological systems of which they form part, and, in the case humans, including property.
Hazard	Inherently dangerous quality of a substance, procedure or event.
Pathway	Mechanism or route by which a contaminant comes into contact with, or otherwise affects, a receptor.
Precision	Level of agreement within a series of measurements of a parameter.
Receptor	Persons, living organisms, ecological systems, controlled water, atmosphere, structures and utilities that could be adversely affected by the contaminant(s).
Risk	Probability of the occurrence, magnitude and consequences of an unwanted adverse effect on a receptor.
Risk assessment	Process of establishing, to the extent possible, the existence, nature and significance of risk.
Sampling	Methods and techniques used to obtain a representative sample of the material under investigation.
Soil	<p>Upper layer of the earth's crust composed of mineral parts, organic substance, water, air and living matter.</p> <p><b>Note 1:</b> In accordance with BS 10175:2001 the term soil has the meaning ascribed to it through general use in civil engineering and includes topsoil and subsoil; deposits such as clays, silt, sand, gravel, cobbles, boulders and organic deposits such as peat; and material of natural or human origin (e.g. fills and deposited wastes). The term embraces all components of soil, including mineral matter, organic matter, soil gas and moisture, and living organisms.</p>
Source	<p>Location from which contamination is, or was, derived.</p> <p><b>Note 1:</b> This could be the location of the highest soil or groundwater concentration of the contaminant(s).</p>
Uncertainty	Parameter, associated with the result of a measurement that characterizes the dispersion of the values that could reasonably be attributed to the measurement.

- 1 In areas of proposed soft landscaping not underlain by basements or surface water attenuation tanks, an active pollutant linkage to future human health receptors will be present.
- 2 Made, Ground, Alluvial Deposits, potential historic tanks may act as a source of ground gas. Ground gas monitoring by Geotechnics in 2005 classified as Characteristic Situation 1.
- 3 Construction will come into direct contact with contaminants during development construction.

- 4 Piles penetrating the London Clay Formation may act as a preferential pathway from contaminants from the shallow deposits to impact the sensitive aquifers underlying the London Clay Formation.
- 5 The Fleet River Sewer may act as a viable pathway for contaminants to impact the River Thames.

## Appendix C Consultation Information

## Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

### Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

### Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

### Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

#### **Introduction**

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
