| 2018/1890/P | SAMUEL STEELE | 04/06/2018 19:52:17 | COMMENT | <p>My objection to planned development at 45 NEW COMPTON STREET WC2H 8DF Are that the proposed,development of a lift shaft that will be installed against the wall off all the bedrooms at that side of the building This is not acceptable ,as this will have a health impact on tenants who live in these flats. As we the tenants in these flats haven't been given any assurances, or guarantees that the noise pollution won't affect our health and how much sleep deprivation it will cause. I am sure that both that CAMDEN COUNCIL and the DEVELOPER, have care of duty of we the tenants and that our health and mental well being.</p> |
| 2018/1890/P | David Ferris | 04/06/2018 16:10:17 | OBJECTION | <p>In principle, I like the idea of this development. It makes underlying economic sense by using under-used space in a popular part of London.</p> <p>My concerns are:</p> <ol style="list-style-type: none">1) The new lift [REDACTED] will disturb my sleep. Integrated loudspeaker instructions would exacerbate the problem. Unless this issue can be addressed, I would oppose the development. Why can't the existing lift be extended to the new roof floor?2) I am not yet clear on what the effect on my property value will be. If it reduces the value, this would be very troubling to me and I would oppose the development. I'd like the developer to provide a credible, evidence-based analysis of the effect on property value.3) It would be nice if some parking is left for existing tenants. This could be on an on-demand basis, or perhaps rationed between us according to some mutually acceptable method. |
