

Wienerberger bat boxes

Learn more about Wienerberger bat boxes and our partnership with EcoSurv.

Wienerberger is very proud of our range of bat boxes. Our partnership with EcoSurv, one of the UK's leading ecological consultancies, has enabled us to create different types of bat boxes to suit your requirements.

Our bat boxes are designed to be integrated into the façade of the building and can be fitted during the build stage of a new build project or fitted retrospectively to existing buildings. They can be an attractive feature for your building as well as providing the best possible artificial accommodation for a variety of bat species.

Wienerberger bat boxes are extremely versatile. They are constructed of a rough aggregate block and feature a plinth detail at the bottom to allow the bats to enter and exit the inside of the bat box. The façade of the bat boxes can be clad in any Wienerberger brick from our extensive brick library of over 400 different brick types.

We have two standard bat box designs. The first comes with a stack bond brickwork finish. This is an ideal option where space is limited or if you want to make a feature of your bat box. The other comes with a stretcher bond brickwork finish so that it seamlessly fits into the rest of the brickwork coursing. This is an ideal option where more space is available or where you want your bat boxes to blend into existing brickwork.

We are also able to offer a wide range of bespoke options. Through our partnership with EcoSurv we are able to design bat boxes to suit your specific needs or requirements.

All creatures great and small: Wienerberger eco-habitats

Our sustainability agenda isn't one that simply concerns itself with our carbon footprint and material longevity. We also make sure that we provide for the environmental needs of the present – such as providing much-needed habitats for British wildlife.
