

Description of Works 154 Goldhurst Terrace

The client has instructed us, Moulton Tree Services, to reduce a sliver birch tree in their front garden. It needs a 30% reduction as the insurance company has implied that it might affect their insurance premiums.

The work will involve cordoning a small area of the street off with two groundsmen keeping the public away from the 'drop zone'. The climber will reduce the overall bushiness of the tree so that it doesn't impact on the clients' property or the public street.

The work should take a maximum of 2-3 hours depending on weather conditions.

Kind Regards

Louis Leitch (Director)
Moulton Tree Services (MTS)
