### 3. Description of the Proposal

Please describe the proposed development including any change of use:

The conversion of a flat topped mansard roof, to a true mansard roof line, as set out in CPG1 5.15. For the purpose of providing adequate shelter from strong winds, for an intensive green roof, that will create an ecological habitat for indigenous plant and insect life, as set out in CPG3 10.5. The new upper slope roof line will extend from the existing lower slope roof line across the length of the roof, both to the front and rear of the building. The new upper slope will match the existing lower slopes natural slate. The existing flat roof and drainage will remain unchanged along with the dwelling space within. The intensive green roof will sit between the new front and rear upper slope of the true mansard, blocking all visibility of the green roof and therefore maintaining the character of the building as well as providing the required wind protection. The new true mansard roof and extensive green roof will sit over an existing flat topped mansard floor, of a nineteenth century building. The building comprises of a single, three story mansard flat and a single, shop on the ground level and basement level.
