SF-01 - Sliding Panel Track System

RAILS EN OPHANGING

Easy to use right down to the smallest detail

Thanks to the well-balanced construction of the track and the precision running gear, Multiwal moveable walls can easily be moved by hand. Based on years of experience, Multiwal has developed a number of silent track systems that can be used for all of its moveable walls. Multiwal has three standard types, each with its own roller technology. In addition to the three standard types, special bespoke track systems can be developed upon request.

Track type MA

Track type MR-1 with ceiling support flange
Track type MR without ceiling support flange

Track type MR-S
- All tracks are aluminium with precision bearing rollers
- Standard powder-coating colour is RAL 9010
- All other colours can be provided upon request

Track suspension

Tracks can be installed with or without a sound baffle between the ceiling and the building structure as required. The desired sound insulation is achieved by using soundproofing materials such as a compressed mineral wool slab, Sonorex or plasterboard.

The bracket suspension system ensures a precise track height and comprises:
- Tubular steel sections 40 x 50 mm
- Galvanized steel assembly plates
- Adjustable threaded steel connection rods at the base
- Soundproofing materials, dependent on the desired sound insulation
Sectional track drawing showing bracket suspension
Sectional track drawing showing bracket suspension with acoustic baffle/barrier
Single suspension point, MA track

Each panel is suspended by one centrally fixed, quadruple surface, bearing roller. This enables panels to be easily moved to the parking position without the use of an auxiliary track.
Double suspension point , MR/MR-1 and MR-S track

Each panel is suspended by two bearing rollers, which enables it to be moved in every required direction to the parking position using an auxiliary track.

Customised parking

The eight most common standard parking positions are shown below. The Multiwal track constructions allow a variety of possibilities to achieve practically all imaginable parking solutions.

Parking position 0

Parking position 1
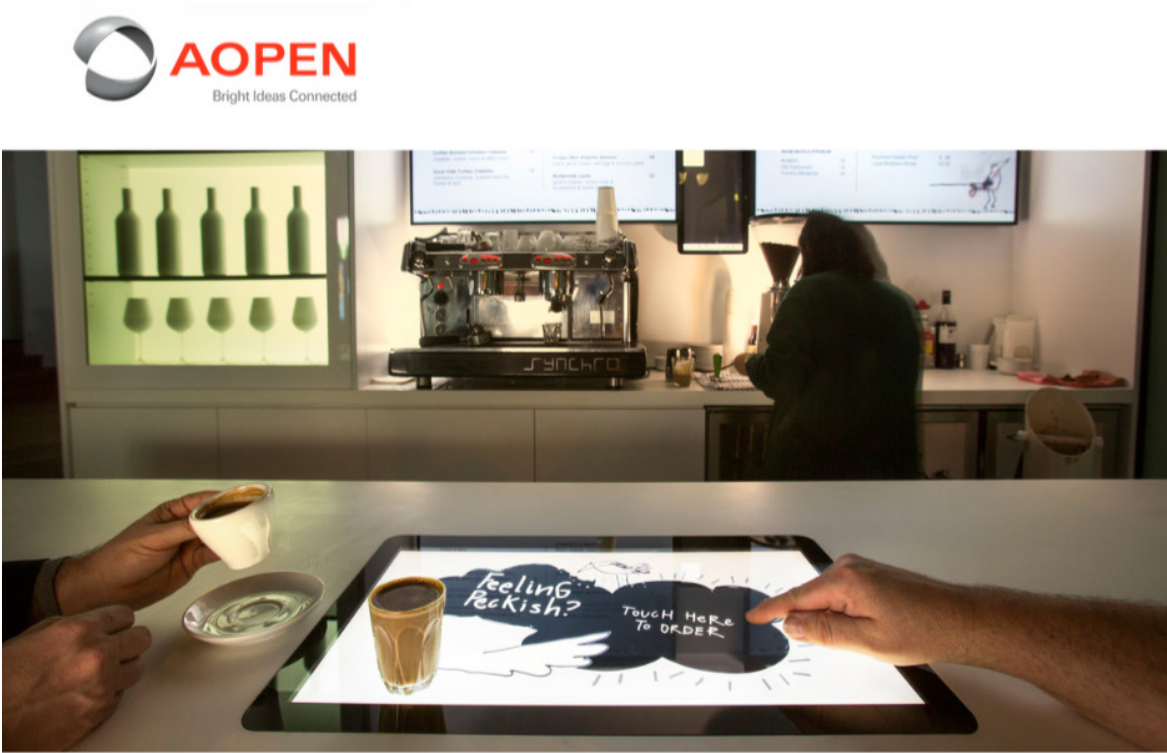

Parking position 2

Parking position 3

Parking position 4

Parking position 5

Parking position 6

Parking position 7

Chromebase Commercial

Commercial Grade Chrome Based 22" All-in-One Touch Display

Introducing the Chromebase Commercial 22"; especially designed for commercial use. The Chrome based multi-touch display is ultra-thin and exceptionally powerful.

The Chromebase Commercial is a solid-state device designed to be extremely robust and secure, making it ideal for interactive public display in high traffic environments (i.e. as a digital signage, POS or kiosk system). For connecting other devices such as POS peripherals and authentication devices (i.e. Biometrics), the Chromebase Commercial has commercial ports, ruling out the need for multiple power cables.

Chrome device management allows administrators to manage their organization's Chrome devices from a single place. Integrators can also use the signage app of their preference available via the Chrome Web Store to control what's on the screen.

The advantages of the Chromebase Commercial 22":
- A commercial grade multi-touch, all-in-one display that is based on Chrome OS.
- Tough and tamperproof design for 24/7 operability in public spaces.
- Commercial ports for connecting POS peripherals and authentication devices.
- Good viewing angles in landscape and portrait.
- Endless mounting options: recessed into surfaces e.g. benches, walls and kiosks; mounted on a wall.
- Optional Chrome Device Management on request to save valuable time and thus costs on installation, programming and maintenance.

Image 1: Example of Chromebase Commercial used as POS, second screen and mount sold separately. | Image 2: Chromebase Commercial Kiosk applications. Mount sold separately and may differ based on regions.

SF-O3 - 55" Video Wall

MultiSync® UN551S
LCD 55" Video Wall Display

\Orchestrating a brighter world **NEC**

Datasheet

Walls of Desire

Attract and engage your audience; the new 55" UN551S shapes emotion and desire with NEC's most compelling video wall experience to date.

The new frameless design forms an entirely flat seamless digital canvas allowing a completely homogeneous image across multiple unified screens. The huge digital surface creates an unhindered viewing experience for your audience with a minimal image interruption of just 0.9mm per screen. The S-IPS panel provides superior picture quality and excellent colour reproduction in both landscape and portrait orientation ensuring perfect visibility even at extreme viewing angles which constantly change as the viewer passes by. At a high brightness level of 700 cd/m² your message will be well received with effortless readability even in the brightest ambient light conditions. An advanced set of intelligent features make the displays easy to install and operate and supports significantly reduced maintenance requirements.

The MultiSync® UN551S is the perfect choice for stunning seamless display surfaces in retail environments, corporate applications, quick service restaurants and all other public spaces.

Benefits

Seamless Video Wall Surface – perfect visual appearance and image homogeneity thanks to frameless design with a minimal inactive screen area of just 0.9 mm.

Reduced Installation and Operating Costs – highly energy efficient LED backlit display ensures low power consumption, longer backlight lifetime and lighter design for easy transportation, mounting and integration.

Smart Way to Large Scale perfectly detailed Imagery – native UHD Daisy Chaining enables the user to create UHD video walls with either a single UHD image or 4 different Full HD sources.

Easy Setup – Auto TileMatrix offers time and cost savings during installation. Configure just one display in order to complete the set up for the entire wall.

Perfect Visual Experience – FrameComp supports a seamless appearance, crucial for fast moving content, creating one stunning image by synchronising the content across the entire video wall.

LCD 55 Video Wall Display - MultiSync® UN551S (1 / 4)

Work By Line ™

SF-O4 - 84" Multisync Screen

Datasheet

NEC MultiSync® X841UHD-2 SST - CAD/CAM and Visualisation of Big Data

The seamless operation of presentation systems is essential to achieving productivity. If the visualization of detailed information in perfect colour fidelity is vital for success in your business, then the 10-real-touch point accuracy of ShadowSense™ technology with Ultra-High Definition pixel-free details is the perfect combination to achieve extraordinary results. The 84" multi-touch-display with 500 cd/m² eye-pleasing brightness offers the ideal platform to facilitate creative and efficient meetings.

All in all a perfect custom-tailored solution for mid-sized meeting rooms to visualize your assets most efficiently, saving you valuable time and money for a secure investment into a brighter future.

Benefits

Impressive Visualization – no parallax issues with zero airgap ZG™ technology, pixel-free and colourfast details in Ultra-High Resolution thanks to the NEC SpectraView® colour engine.

Intuitive Touch Behaviour – enjoy intuitive working and let the display automatically detect and switch between interactions like finger whipping, stylus writing and erasing.

Save Time and Work more Efficiently – ShadowSense™ touch technology offers real-time collaboration in meetings, tracking all 10 touch points with the highest touch point accuracy.

Simple Plug & Play – easy set-up without the need to install any drivers on the host PC for all major operating systems.

Ease of Use – enhance the display with an optional "Windows based" Slot-in-PC using the integrated Ultra High Resolution OPS option slot, thereby simplifying installations and reducing the points of failure.

Reliability at High Ambient Light Operation – enhanced filtering and special sensors allow operation even in the brightest ambient light conditions without causing ghost touches.
