2018/3677/A	John Myers	14/08/2018 11:14:44	OBJNOT	I would support the application subject to the condition that the LED illumination should contain no blue light component or be below a certain colour temperature, perhaps 3000K. Blue light at night and in the evenings has increasingly been shown to disrupt circadian rhythms and melatonin production, impairing sleep and causing ill health. Studies also show that blue light causes damage to the retina.
