Subject: Primrose Hill Primary School: planning application for a floating classroom barge on the canal

We would like to strongly support the school's application. As local residents living very near the school, whose two sons attended the school over twenty years ago, we have always felt that the school should be able to more make use of its proximity to the canal.

There is a wealth of local history about the canal that would be of interest to the pupils and would enable them to feel part of their local area. Actually being on a barge would bring alive to them the importance of the canal in the history of Camden and encourage them to find out more about the locality. The barge would be an excellent learning resource for science and maths, as well as for environmental education. It would be of particular benefit for the many children who do not have many opportunities to access outdoor facilities and enable them learn about their environment. It would also provide excellent opportunities for creative writing, drama and art.

We cannot see anything negative about this proposal and very much hope that the application is successful.

Nikki Haydon and Jim Mulligan
