I am concerned by the extra noise both from the vents and nature and timing of their use - especially as having residential use is radically different to offices as there will be additional problems from usage outside office hours. I live overlooking and situated by the building and the noise will make it impossible to enjoy my terrace . The alterations will also not be suitable for the location and solar panels will be visually unattractive The application does not make clear any other impacts by proposed residential use; nor what 'other minor changes' are.

This development continually asks for additional changes without consulting neighbours and residents. I understand that the vents can also cause additional smells or exhaust and effect on light and reflection from the panels.

I strongly object to these planning proposals.
