Hi Robert,

As discussed, Phase 3 is a Remediation Strategy for the site which will be £1000 + VAT. We will need a site plan of the proposed development.

Phase 4 is a validation report which will be £1000 + VAT.

For the validation report I will need the following information supplied:

1. Details of what you have done on site
2. A proposed site plan for what you have done with any soft landscaped areas marked up
3. Details of the depth of imported soils in any soft landscaped areas.
4. Export tickets for soils leaving site
5. An estimation of the volume of material which has left site.
6. Import tickets for clean soils in soft landscaped areas
7. A chemical analysis report for the clean imported soils (if this is not available we may have to take samples and analyse them at (£145 + VAT per sample)
8. A letter from the ground worker to say they have not encountered additional contamination
9. Photos of the soft landscaped areas of the site and the site as a whole and if possible of the process of remediation
10. Details if any gas protection measures (if they were needed) and photos of the gas membrane in place
11. We also need to go to the site and check the depth of the cover layer. We will need someone your end to dig a few trial pits so we can check the depth

If you have any questions or queries, please get in contact.

Thanks

Aubrey
