

SW

14

Roof ridge raised by 255 mm & internal floor levels adjusted to lessen excavation & improve the relationship between the ground floor & garden. Good light levels maintained to adjacent staircase window & other small secondary side elevation windows to 14 Parliament Hill.

Gable end dormer with ventilation "chimney" over the internal staircase. Automatic opening window on thermal & rain sensors provides passive stack ventilation. Gable end & chimney form modelled on adjacent houses.

Roofs clad in flat, horizontally welted, pre-weathered natural grey zinc (instead of a mixture of zinc & clay tile). Zinc throughout is a more singular & practical solution to the variable roof forms. The grey tone matches adjacent slate roofs & visually blends with the surrounding context.

Some fenestration details (window locations, etc) altered slightly in response to the repositioning of the attic window.

Roof ridge raised by 255 mm & internal floor levels adjusted to lessen excavation & improve the relationship between the ground floor & garden.

Attic level window repositioned more centrally & at higher level to improve ventilation & simplify roof profile & structure.
