Subject:	RE: URGENT: RE: 150 Holborn - Condition 30 - Air Quality
Attachments:	150 Holborn - Air Monitoring Results 18-08 to 18-11 (Aug-Nov 18).pdf

Sam,

Please find our response below to close out Condition 30

- PM10 monitoring baseline data for at least 3 months has been (or will be) obtained and will be provided to the Council to allow final discharge of this condition, prior to commencement of implementation – 3 month monitoring has been obtained from 6/8/18 to 6/11/18 . Please find attached

- The AQ monitoring locations are suitable in respect of prevailing atmospheric conditions, key nearby receptors and dust-generating activities on the site – Confirmed. Air monitors will be positioned in order to capture dust-generating activities while considering atmospheric conditions, to best measure exposure at key nearby receptors. Given the nature of the work and constantly changing landscape, monitors may need to be moved during the course of demolition to avoid obstructions, damage and obtain realistic results

- Both monitor positions are free from potential obstructions and are in line with sources of dust on either side of the site boundary – Confirmed. As per the above.

Kind Regards,

Richard Strong
Senior Project Manager
