My name is Nicholas Kay,

[REDACTED] it will cause considerable air pollution during the construction in an area that is already breaking legal for clean air. This is partly due to too much development in general.

This application will reduce the daylight in all properties as it comes out further then the original building.

This is one of the first buildings in King's Cross and from a conservation aspect - this should not even be considered. I support the return of the original facade and wheel chair access, however, This expansion will reduce the quality of life for existing residents and place.

OBJECTION for all four properties.

Thanks
