

Summary

This document summarises the main amendments to the corresponding proposed drawings.

The proposals have arisen from discovery items following approved and iterative opening up works.

The interventions we seek to gain approval fall into two main categories.

- Structural works to stabilise and support the buildings going forwards
- Architectural amendments following the removal of modern finishes.

The structural interventions are necessary and have been designed as sensitively as possible to maintain the fabric of the building, whilst providing structural stability for the building going forwards.

The architectural interventions have been designed to maintain the spirit and the character of the existing buildings.
