

Basement Impact Assessment

pro forma 1v0

Introduction

A Basement Impact Assessment (BIA) is required for all planning applications with basements in Camden.

Basement Impact Assessments must be prepared in general accordance with policies and technical procedures contained within the documents listed below.

- Guidance for Subterranean Development (GSD). Issue 01. November 2010. Ove Arup & Partners.
- Camden Planning Guidance (CPG): Basements (March 2018).
- [Camden Local Plan 2017](#)¹ (: Policy A5 Basements and Policy CC3 Water and flooding.

Policy A5 Basement Requirements

Camden's Local Plan 2017 Policy A5 'Basements' is the essential planning policy which must be satisfied in order for basement development to be acceptable.

The Council will only permit basement development where it is demonstrated to its satisfaction that the proposal will not cause harm to neighbouring properties or the structural, ground, or water conditions of the area.

The policy sets out that the siting, location, scale and design of basements must have minimal impact on, and be subordinate to, the host building and property. Basement development should:

- not comprise of more than one storey;
- not be built under an existing basement;
- not exceed 50% of each garden within the property;
- be less than 1.5 times the footprint of the host building in area;
- extend into the garden no further than 50% of the depth of the host building measured from the principal rear elevation;
- not extend into or underneath the garden further than 50% of the depth of the garden;
- be set back from neighbouring property boundaries where it extends beyond the footprint of the host building; and
- avoid the loss of garden space or trees of townscape or amenity value.

Exceptions to the above may be made on large comprehensively planned sites. It is recommended that development proposals are discussed with LBC at the outset of any development planning.

Appendices

Appendix 1: Desk Study References

1.0 Non-Technical Summary

- 1.1.1. The site location is 3, 5 & 7 Fortess Road, Camden see site location plan in Section 2.3.
- 1.1.2. The current site arrangement is commercial premises on the ground floor with residential properties above, the majority of which are vacant due to the structural instability of the building.
- 1.1.3. The proposed development comprises demolition of the existing building and construction of a four storey property with a basement as described in Section 2.4.
- 1.1.4. The following assessments are presented:
 - Desk Study
 - Screening
 - Scoping
- 1.1.5. The authors of the assessments are Morwenna Corry BSc., MSc., FGS and reviewed by Matt Dean BEng., CEng., CEnv., C.WEM, MCIWEM.
- 1.1.6. The ground and groundwater conditions beneath the site are London Clay Formation immediately underlying the Made Ground. Groundwater level is not anticipated above 30m bgl.
- 1.1.7. The construction methods are likely to be a contiguous piled basement wall constructed once the site is cleared of existing buildings. Excavation of the soil will be carried out following construction of the basement walls to ensure stability of the neighbouring properties and the highway.
- 1.1.8. Movements of nearby structures should be monitored throughout the works, the results regularly reviewed and if required, immediate actions taken to mitigate movements greater than anticipated.
- 1.1.9. The screening stage completed in Chapter 4 indicated no significant impacts.
- 1.1.10. It is not possible to carry out a site investigation at this time due to the structural instability of the existing building and no safe or logistical access for intrusive site investigation plant. It is considered that the further assessments required within a BIA could be dealt with as conditions following a successful decision notice.

2.0 Introduction

The purpose of this assessment is to consider the effects of a proposed basement development at 3, 5 & 7 Fortress Road, Camden, NW5 1AA on the local hydrology, geology, hydrogeology and potential impacts to neighbours and the wider environment. The site location plan is presented in Appendix 1 and in Section 2.3.

The BIA approach follows current planning procedure for basements and lightwells adopted by LB Camden and comprises the following elements (CPG Basements):

- Desk Study;
- Screening; and
- Scoping;

2.1. Authors

2.1.1. The BIA has been authored by Morwenna Corry BSc., MSc., FGS and reviewed by Matt Dean BEng., CEng., CEnv., C.WEM, MCIWEM and Sally Hudson BSc, MSc, DIC, CGeol FGS.

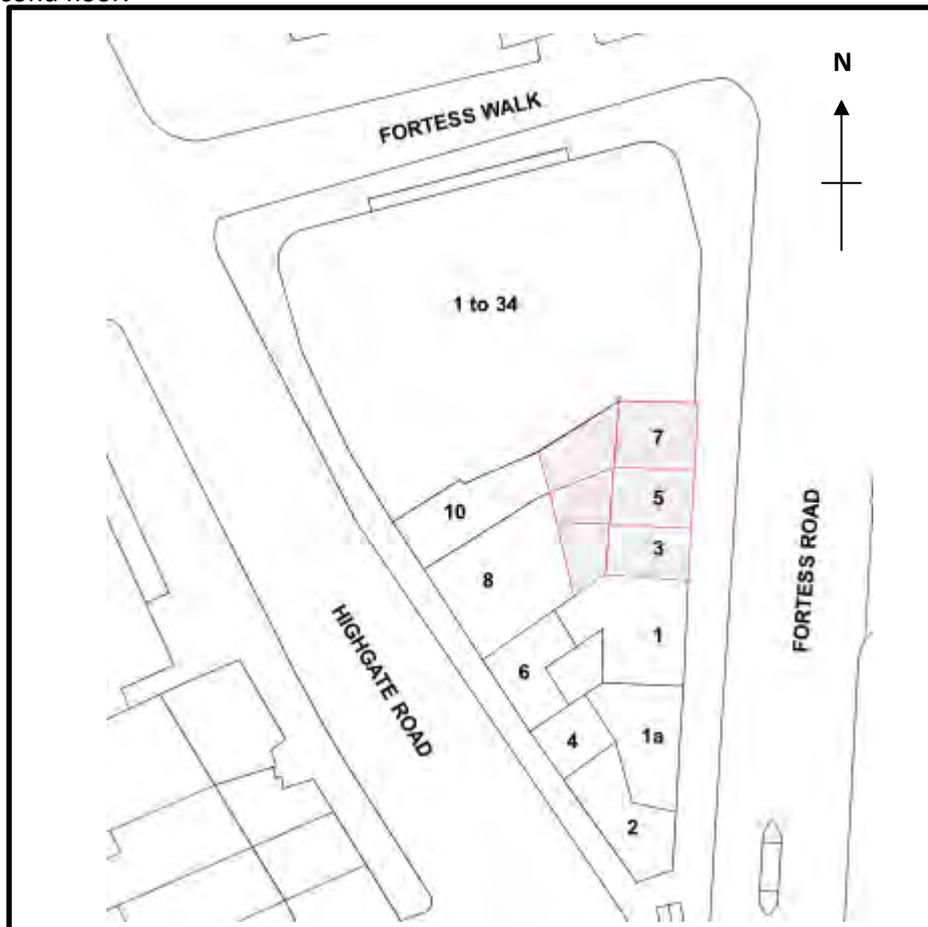

2.2. Sources of Information

The following baseline data have been referenced to complete the BIA in relation to the proposed development:

- Site walkover and discussion with owner on Thursday 13th December 2018;
- Current/historical mapping Appendix 1;
- Geological mapping Appendix 1;
- Hydrogeological data Appendix 1;
- Current/historical hydrological data Appendix 1;
- Flood risk mapping Appendix 1;
- LB Camden, Strategic Flood Risk Assessment (produced by URS, 2014);
- LB Camden, Floods in Camden, Report of the Floods Scrutiny Panel (2013);
- LB Camden, Planning Guidance (CPG) – Basements (March 2018);
- LB Camden, Camden Geological, Hydrogeological and Hydrological Study – Guidance for Subterranean Development (produced by Arup, 2010);
- LB Camden, Local Plan Policy A5 Basements (2017);
- LB Camden’s Audit Process Terms of Reference;

2.3. Existing Development

- 2.3.1. The Application site is located at 3, 5 & 7 Fortress Road and is not within a hillside setting.
- 2.3.2. The site is at an elevation of approximately 40m AOD and the site slope angle is between 0° – 7°.
- 2.3.3. The site, generally rectangular in plan, is centred at National Grid Reference 528970,185340, and occupies an approximate area of 0.02ha as shown on the site location plan included in Appendix 1. The site currently comprises a three storey terraced building, which has been subdivided into two commercial properties on the ground floor and residential flats on the first and second floor.

Site Location Plan

Site Walkover

- 2.3.4. A site walkover was undertaken by a qualified consultant from Lustre on 13th December 2018. The property owner was not present and there was no access to the property as it has been declared structurally unstable and therefore not safe to enter.
- 2.3.5. The commercial space at 3 Fortress Road is currently occupied by a Chinese takeaway, whilst the commercial space at 5 & 7 Fortress Road is vacant.

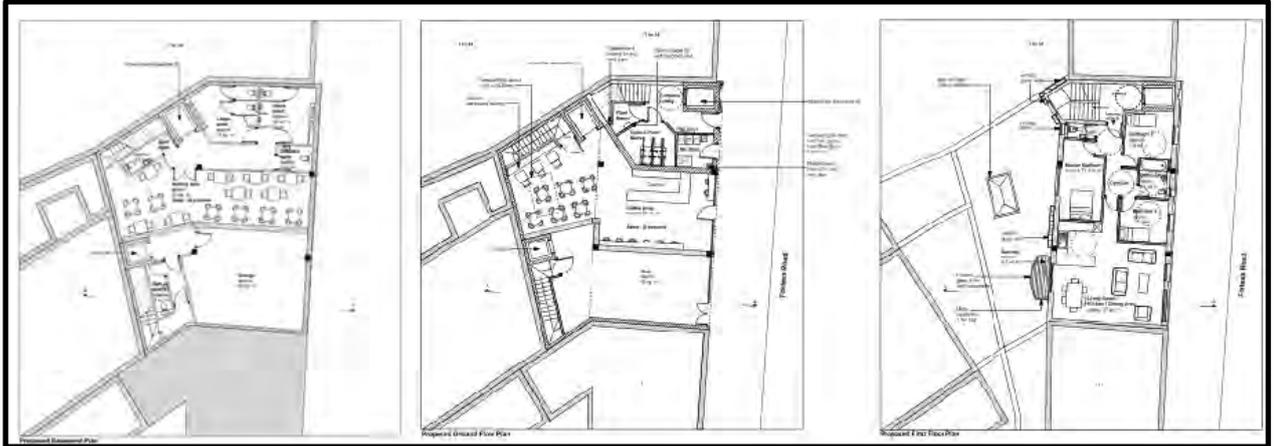

- 2.3.6. The residential properties above 5 & 7 are currently unoccupied due to the structural instability of the property, whilst the residential property above 3 is occupied.

Surrounding Area

- 2.3.7. Adjacent to the northern boundary of the site is a mixed level (4, 5 & 6 storey's) apartment block 'Tally Ho Apartments', with a commercial space on the ground level which fronts both Fortess Road and Fortess Walk. Based on the plans submitted to planning this building does not have a basement.
- 2.3.8. To the south of the property there is a three storey brick building with commercial space on the ground floor and residential dwellings on the first and second floor (No.1 Fortess Road). It is not known whether this property has a basement.
- 2.3.9. Further south there is a four storey brick building, which has two separate commercial units on the ground floor. The most southerly of these units (No.2) has a basement, but the extent of this is not known as the property was not accessible.
- 2.3.10. Directly to the rear of the property (west) there are two brick buildings, the most northerly is three storeys with commercial space on the ground floor and residential dwellings above. The southerly building is a four storey property with commercial space on the ground floor and residential above.
- 2.3.11. The structural composition of the surrounding properties is not known, nor the foundation depths. It is known that Tally Ho Apartments does not have a basement, and that No.2 Fortess Walk has a basement. However, the presence of basements at the other surrounding properties is not known.
- 2.3.12. Fortess Road is present to the east of the site and the buildings on the opposite side of the road are generally a mix a commercial space on the ground floor and residential dwellings above.
- 2.3.13. None of the neighbouring properties are listed and there are no neighbouring gardens or trees.
- 2.3.14. 100m to the south of the site there is a railway cutting through which runs both the London Underground and the over ground trains. There are no known or recorded underground railway lines directly below the site according to the LUL Property Asset Register, the extract is included in Appendix 1.

2.4. Proposed Development

- 2.4.1. The proposed development is the demolition of the existing buildings and the construction of a part single storey and three storey building with a basement. The basement and ground floor occupy the whole footprint of the site, whilst the second and third storeys are only on the most easterly portion of the site.

Proposed Basement, Ground and First Floor Plans

- 2.4.2. The basement and ground floor are proposed to be divided in a generally 2:1 ratio with the single southerly part being a shop on the ground floor with basement storage. The larger northerly portion is proposed to be a coffee shop, with seating on the ground floor and within the basement and associated amenities.
- 2.4.3. The entrance lobby, bin store, cycle store and plant room for the residential properties above are located in the most northerly part of the ground floor building.
- 2.4.4. A residential apartment is located on each of the first, second and third floors. Balconies are proposed on the western elevation for each of the flats and vertical green walls are proposed on the western elevation.

3.0 Desk Study

3.1. Site History

On Site

- 3.1.1. The site history has been assessed by reviewing historical Ordnance Survey maps provided by Envirocheck (Report No. 188984870_1_1, dated December 2018), which is in Appendix 1.
- 3.1.2. The earliest map of the site is dated 1850, by 1871 terraced properties are present on the eastern side of the site with the associated rear gardens on the western side which extend beyond the site boundary. There are no notable changes until the map dated 1953.
- 3.1.3. By 1953 the site layout has changed to that of the present day, with properties present across the site fronting on to Fortress Road. There are no further changes on site.

Residential Properties		1972	-

3.1.4. By 1963 the majority of the various factories, works and warehouses are labelled generically as such as opposed to specific descriptions.

3.1.5. There are no further significant changes from 1973 to the present day.

3.2. Geology

3.2.1. The 1:50,000 British Geological Survey (BGS) map (Sheet 270)² and the BGS website (National Geoscience Information Service)³ show the site to be directly underlain by the London Clay Formation, comprising poorly laminated, blue-grey or grey-brown, silty to very silty clay.

3.2.2. Given the recorded development of the site to date, a layer of Made Ground of unknown thickness is anticipated on site.

3.2.3. Historic borehole records have been identified relating to boreholes drilled within the general vicinity of the site and surrounding area. The closest historic borehole was recorded approximately 80m north of the site (TQ28NE43). A summary of ground conditions encountered is provided below and a copy of the borehole log is included in Appendix A.

- Made Ground: to 0.90m bgl.
- London Clay: Brown clay and scattered gravel to 1.67m bgl, firm brown mottled clay to 6.70m bgl and firm brown fissured clay to 9.14m bgl (base of the borehole).
- Groundwater was not encountered.

3.2.4. The BGS also holds data on non-coal mining areas and potential ground stability hazards for the UK that may affect the site. The Coal Authority holds data on coal mining affected areas for the

² BGS Solid and Drift Map Sheet 270

³ Information from BGS website: www.bgs.ac.uk consulted in month of report issue

UK. The non-mining and potential ground stability hazards provided by Landmark are summarised in the following table.

Details	On-site	Hazard Potential
Mining Instability	No	No Hazard
Man-Made Mining Cavities	No	No Hazard
Natural Cavities	No	None Recorded
Coal Mining Affected Area	No	No Hazard
Non-Coal Mining Affected Area	No	No Hazard
Potential for Collapsible Ground Stability Hazards	Yes	Very Low
Potential for Compressible Ground Stability Hazards	No	No Hazard
Potential for Ground Dissolution Stability Hazards	No	No Hazard
Potential for Landslide Ground Stability Hazards	Yes	Very Low
Potential for Running Sand Ground Stability Hazards	No	No Hazard
Potential for Shrinking or Swelling Clay Ground Stability Hazards	Yes	Moderate

- 3.2.5. There are no BGS Recorded Mineral entries listed within 1km of the site.
- 3.2.6. No man-made cavities or natural cavities are present within 1km of the site.
- 3.2.7. The site is located within a low probability radon area, as less than 1% of homes are above the action level; no radon protective measures are considered necessary in the construction of new dwellings or extensions.

3.3. Hydrogeology

- 3.3.1. The geology underlying the site is classified as an unproductive strata.
- 3.3.2. LB Camden data indicates the site is not within a groundwater source protection zone.
- 3.3.3. There is one groundwater abstraction within 1km of the site, this is located 653m south of the site for the Kentish Town Sports Centre.

3.4. Hydrology, Drainage and Flood Risk

- 3.4.1. The site is located within 821m of the Lido at Hampstead Heath, due to the distance of this surface water feature it is not considered to be a receptor from the site.
- 3.4.2. There are no surface water abstractions within 1km of the site.
- 3.4.3. The site is located within 100m of the historic river Fleet watercourse, however, at this point the river is culverted and is part of the sewer complex.

- 3.4.4. The site is not within the catchment of the Hampstead Heath Pond Chain, which is over 1km north west of the site.
- 3.4.5. The site surface area is currently 100% impermeable comprising buildings, currently surface water flows to the combined sewer within Fortress Road. The proposed surface area will also be 100% impermeable comprising a building.
- 3.4.6. The site is classified as very low risk of surface water flooding, reservoir flooding and sewer flooding. This is defined by the Environment Agency as having less than 1:1000 probability of fluvial and tidal flooding (the lowest level indicated on their mapping).
- 3.4.7. It is not located within a Local Flood Risk Zone.
- 3.4.8. The site is not within a Critical Drainage Area as defined by LB Camden.

3.5. Other Information

Ecology

- 3.5.1. According to data from the Envirocheck report, there are no Sites of Special Scientific Interest, Special Areas of Conservation, Special Protection Areas, Areas of Outstanding Natural Beauty, Local Nature Reserves, Nitrate Vulnerable Zones or any other environmental designations within 1km of the site.

Environmental Regulatory Records

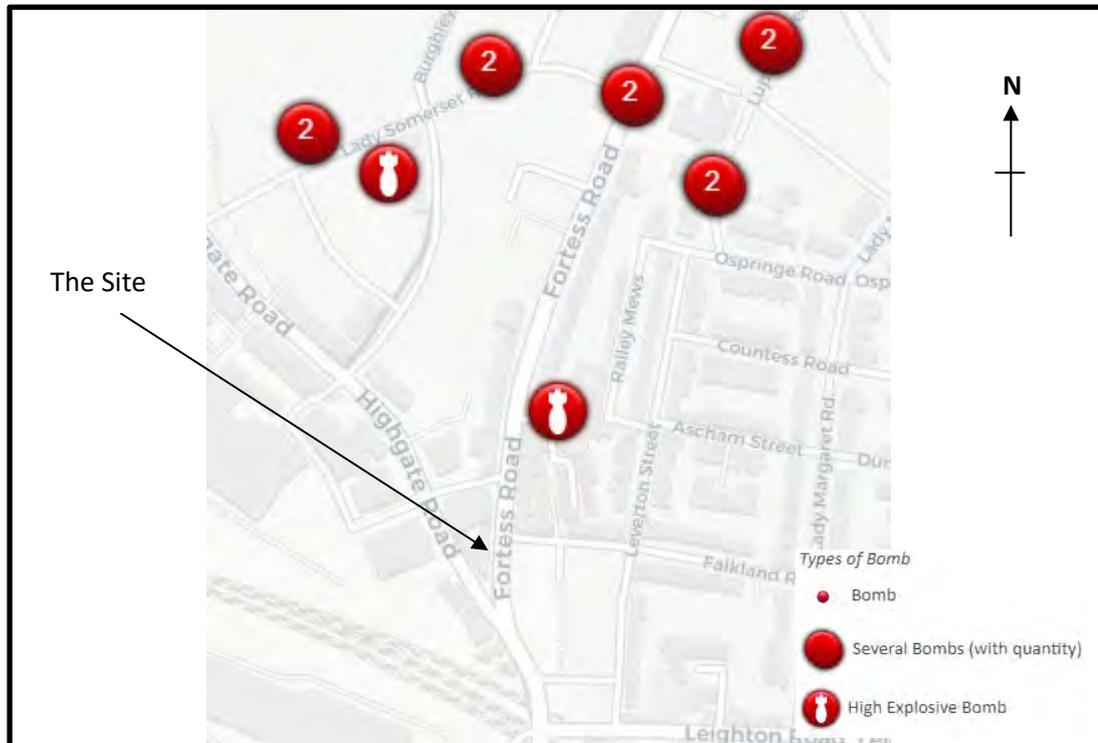

- 3.5.2. Information on potentially significant environmental issues and controls at the site and surrounding area have been sourced directly from the regulatory authorities via the Envirocheck database. Copies of the Envirocheck Report is provided in Appendix A and a summary provided in the table below.

Public Record	On site / Off site	Features
Environmental Permits and Controls	Off site	There are six records within 250m of the site, with the closest 43m NE held by Perk Clean and pertains to PG6/46 dry cleaning. Other records relate to respraying of road vehicles and dry cleaning.
Pollution Incidents to Controlled Waters	Off site	There are no pollution incidents recorded within 250m of the site.
Hazardous Substances	Off site	There are no hazardous substances (e.g. Control of Major Accident Hazards (COMAH), Notification of Installations Handling Hazardous Substances (NIHHS) or Planning Hazardous Substance Consents) recorded within 250m.
Landfill Sites	Off site	There is one recorded within 1km of the site, which is located 280m SW of the site for a household waste amenity site.
Waste Management Facilities	Off site	There are no Licensed Waste Management Facilities (LWMF) or registered waste treatment / disposal sites recorded within 250m of the site.

Public Record	On site / Off site	Features
Contemporary Trade Directory Entries	On site	None recorded.
	Off site	A total of 25 entries are recorded within 250m of the site. The closest entry is 5m S and relates to a launderette. Other entries include dry cleaners, freight forwarders, scaffolding, garage services, food and clothing manufacturers and retail outlets.
Petrol Filling Stations (PFS)	Off site	None recorded within 250m of the site.

Unexploded Ordnance

3.5.3. An historical record bomb search using bombsight.org was undertaken in the vicinity of the site. The search was limited to WW2 bombs. The results are shown below.

3.5.4. The findings of the search identified no potential bomb sites associated with WW2 bombs shown on the above figure within close proximity of the site. This suggests a low UXO risk on this site and the historical review identified no obvious signs of bomb damage to the buildings in the immediate area.

4.0 Screening

4.1.1. A screening process has been undertaken and the findings are described below.

Question	Response	Details
1a. Is the site located directly above an aquifer?	No	The site is over an unproductive aquifer (London Clay).
1b. Will the proposed basement extend beneath the water table surface?	No	Any groundwater present would be perched and of very low flows and volumes.
2. Is the site within 100m of a watercourse, well (used / disused) or potential spring line?	No	Based on EA website and Envirocheck report, no watercourses, reservoirs, wells or springs within 100m. The River Fleet is within 100m; however this is a culverted sewer.
3. Is the site within the catchment of the pond chains on Hampstead Heath?	No	The site is located over 1km south of the FEH Hampstead Heath pond boundary.
4. Will the proposed basement development result in a change in the proportion of hard surfaced / paved areas?	No	The site is currently 100% impermeable and will remain so following development.
5. As part of site drainage, will more surface water (e.g. rainfall and run-off) than at present be discharged to the ground (e.g. via soakaways and/or SUDS)?	No	Surface water will continue to be discharged via existing surface water sewers.
6. Is the lowest point of the proposed excavation (allowing for any drainage and foundation space under the basement floor) close to, or lower than, the mean water level in any local pond (not just the pond chains on Hampstead Heath) or spring line?	No	There are no ponds in locality of the site. Given the scale of the proposed development and the site's distance from any local water bodies, proposed development will not affect flow to any ponds and therefore it is not considered any mitigation measures are required.

4.2. Slope Stability

Question	Response	Details
1. Does the existing site include slopes, natural or man-made greater than 7 degrees (approximately 1 in 8)?	No	The topography at the site and surrounding area does not include any slopes >7°.
2. Will the proposed re-profiling of landscaping at the site change slopes at the property boundary to more than 7 degrees (approximately 1 in 8)?	No	The proposed development does not include any slopes >7°.
3. Does the development neighbour land, including railway cuttings and the like, with a slope greater than 7 degrees (approximately 1 in 8)?	No	The adjoining land does not include any slopes >7°. All transport infrastructure is outside the zone of influence from development at the site.
4. Is the site within a wider hillside setting in which the general slope is greater than 7 degrees (approximately 1 in 8)?	No	The area falls to the south, below the threshold >7°.
5. Is the London Clay the shallowest strata at the site?	Yes	Based on historic borehole records and BGS maps there are no superficial deposits.

6. Will any trees be felled as part of the development and/or are any works proposed within any tree protection zones where trees are to be retained?	No	No, there are no trees on or in close proximity of the site.
7. Is there a history of seasonal shrink-swell subsidence in the local area and/or evidence of such effects at the site?	No	But the London Clay Formation is known to be a high volume change potential soil.
8. Is the site within 100m of a watercourse or a potential spring line?	No	Although the site is proximal to the course of the former River Fleet, this is now culverted and part of the Thames Water Sewer Network.
9. Is the site within an area of previously worked ground?	No	The only previous works were former buildings within the site building footprint which may result in <1m shallow worked ground and former footings.
10. Is the site within an aquifer. If so, will the proposed basement extend beneath the water table such that dewatering may be required during construction?	No	The site is underlain by London Clay Formation, which is classified as an unproductive strata.
11. Is the site within 50m of the Hampstead Heath Ponds?	No	The site is over 1km from the Hampstead Heath Ponds.
12. Is the site within 5m of a highway or pedestrian right of way?	Yes	The site is located adjacent to Fortress Road.
13. Will the proposed basement significantly increase the differential depth of foundations relative to neighbouring properties?	Yes	Planning History does not state that neighbouring properties have basements. As the surrounding properties are low rise they are likely to have shallow spread foundations.
14. Is the site over (or within the exclusion zone of) any tunnels, e.g. railway lines?	Yes	According to the LUL Property Asset Register part of the site is within the Northern Line Exclusion Zone.

4.3. Surface Water and Flooding

Question	Response	Details
1. Is the site within the catchment of the ponds chains on Hampstead Heath?	No	The site is located over 1km south of the Hampstead Heath ponds.
2. As part of the proposed site drainage, will surface water flows (e.g. volume of rainfall and peak run-off) be materially changed from the existing route?	No	The site currently discharges to the combined sewer in the public sewer network.
3. Will the proposed basement development result in a change in the proportion of hard surfaced / paved external areas?	No	The site is currently 100% impermeable and will remain so.
4. Will the proposed basement result in changes to the profile of the inflows (instantaneous and long-term) of surface water being received by adjacent properties or downstream watercourses?	No	As the site is currently 100% hardstanding and will remain so, no change to surface water runoff is anticipated.
5. Will the proposed basement result in changes to the quality of surface water being received by adjacent properties or downstream watercourses?	No	All foul sewerage will be connected to the public sewer network.
6. Is the site in an area identified to have surface water flood risk according to either the Local Flood Risk Management Strategy or the Strategic Flood Risk Assessment or is it at risk from flooding, for example because the proposed basement is below the static water level of nearby surface water feature.	No	The site is not located within a critical drainage area and the LB Camden flood maps indicate the site to be at very low risk from surface water flooding.

4.4. Non-Technical Summary of Screening Process

4.4.1. The screening process identifies the following issues to be carried forward to scoping for further assessment:

- London Clay Formation is the shallowest strata on site.
- There is potential for shrink -swell in the vicinity of the site.
- The site is within 5m of a public highway.
- The proposed development will increase differential foundation depth with neighbours.
- Part of the proposed development is within the LUL exclusion zone of the Northern Line.

4.4.2. The other potential concerns considered within the screening process have been demonstrated to be not applicable or not significant when applied to the proposed development.

5.0 Scoping

The following issues have been brought forward from the Screening process for further assessment:

5.1. London Clay Formation

- 5.1.1. London Clay Formation is shown to be the shallowest strata on site on GHHS figure 4, which is known to be a high volume change potential clay.
- 5.1.2. The London Clay Formation is therefore present at a depth that the effect of shrinkage and swelling from root influence, changes in moisture content or other heave risk factors such as release of overburden pressure following notable changes in ground level will be considered significant.
- 5.1.3. Given the potential for soil moisture levels to change following development works and recovery of ground overburden pressure following excavation of the basement at the site, the Structural Engineer should design the basement slab and foundations to accommodate heave. This may include the placement of a foundation protection board around footings or ground beams, such as Claymaster or Clayshield type product and placement of a void former with a sufficient void depth such as Cellcore under floor slabs. The depth, thickness and type of board selected should be confirmed by specialist supplier such as Cordek or similar manufacturer based on a likely high volume change potential of the soils.
- 5.1.4. The London Clay Formation is a known pyritic soil and this will need to be considered when choosing the concrete to be used in the construction of the basement.
- 5.1.5. Soil testing following demolition and site clearance is recommended, to determine bearing capacity of the soils, heave potential and the appropriate concrete class prior to construction.

5.2. Within 5m of public highway

- 5.2.1. The site is located within 5m of a public highway, this being Fortress Road which bounds the site to the east.
- 5.2.2. Therefore, the structural engineer will need to take this into consideration when deciding on the most appropriate construction method to ensure that the highway is not impacted.
- 5.2.3. A detailed construction method statement will need to be produced by the structural engineer to state how the risk to the highway will be mitigated during these works. An outline proposal is presented in Chapter 7.
- 5.2.4. Additionally, the deflection of the basement retaining wall will need to be calculated to ensure that any movement will be within acceptable limits, and if not, a suitable monitoring regime and mitigation measures designed.

5.3. Differential foundation depths

- 5.3.1. The proposed development will increase differential foundation depth with neighbours.
- 5.3.2. Construction and excavation activities may cause some ground movements that have the potential to damage existing, neighbouring structures.
- 5.3.3. It is considered that the development proposals can be suitably designed to maintain stability and will form part of the detailed design and monitoring regime of the structure and foundations following planning approval.
- 5.3.4. It is recommended following demolition and site clearance that a soil investigation is carried out to determine the foundation construction of the neighbouring properties and to determine the deeper ground conditions and obtain material properties of the underlying soils.
- 5.3.5. The information obtained from the site investigation can then be used to undertake a ground movement assessment for neighbouring properties, infrastructure and deflection of the basement retaining walls fronting Fortress Road.

5.4. LUL Exclusion Zone

- 5.4.1. Information from the LUL Public Asset Register indicates that the site is within the exclusion zone of the Northern Line which is generally located under Fortress Road.
- 5.4.2. Further information will be required from LUL to obtain the invert level of this tunnel and whether the basement will extend into the exclusion zone which is generally considered to be 3m either side and 6m above and below the tunnels.

6.0 Site Investigation/Additional Assessments

6.1. Site Investigation

- 6.1.1. It is not possible to carry out the works currently as the property is structural unsafe and not accessible.
- 6.1.2. It is recommended that a site investigation is carried out following demolition of the existing building, once the site is cleared.
- 6.1.3. The site investigation would determine the ground conditions and create a ground and groundwater model for the site.

6.2. Additional Assessments

- 6.2.1. Based upon our current knowledge of the site, no additional assessments are considered necessary.

7.0 Construction Methodology/ Engineering Statements

7.1. Outline Geotechnical Design Parameters

7.1.1. The outline geotechnical design parameters will be determined following the site investigation which can only be carried out following demolition of the existing structurally unsafe building.

7.2. Outline Temporary and Permanent Works Proposals

7.2.1. The detailed structural design will be subject to the findings of an intrusive geotechnical investigation, which, in our opinion can be dealt with as a condition of the Decision Notice as the site is currently inaccessible due to safety factors. The detailed design will take into consideration the following factors:

- Ground Conditions,
- Groundwater (confined),
- The impacts on adjacent properties, and
- Appropriate design and construction methodology.

7.2.2. Based on our current knowledge of the site, it is likely that the structure will comprise the use of contiguous piling techniques for the basement retaining walls. The walls will act as a both temporary and permanent structural walls for the new basement. This form of construction limits ground movements and avoids structural damage to the adjacent properties.

7.2.3. As the site will be demolished and cleared at the time of development it is not considered that there are any access constraints. The contiguous pile wall can be constructed prior to the excavation of the basement maintaining stability.

7.2.4. It is considered that this method of construction will be sufficient to allow the construction of the basement, whilst ensuring maintenance of the boundary walls and the adjacent highway.

7.2.5. The basement will either be founded on a ground bearing or suspended floor slab depending on the findings of the geotechnical investigation. The slab will likely be founded at a depth of around 2.8m bgl, on the London Clay Formation. The subsequent reinforced concrete structure will be constructed within the excavation which together with the piles will form the overall basement structure.

Construction Management Plan

7.2.6. Prior to the works commencing, the contractor will submit a Construction Management Plan. The plan will confirm the programme duration, number, movements and routing of construction vehicles, access and egress arrangements and the management of potential dust, noise and vibration impacts. It is our opinion that the plan can be prepared as a condition of the Decision

Notice. However, in order to inform this Basement Impact Assessment, an outline management plan has been provided below.

Notification of neighbours

- 7.2.7. The main contractor will display an identification board with details of their name, address and contact number along with an estimated duration of works in a visible position on the site boundary, i.e. on the site hoarding.
- 7.2.8. This contractor will be a local point of contact for any enquiries and / or complaints regarding the construction works. A member of staff will also be nominated to liaise with the local residents, the Council and any sub-contractors / operators. They will circulate a regular newsletter to the local residents explaining the programme of works, progress thus far and any key events. Should there be any unavoidable noisy periods of activity, the contractor will write to the local residents to inform of these works with reasonable notice.

Site Access, Vehicle Movements & Road Closures

- 7.2.9. Prior to the works commencing, the contractor will submit a Traffic Management Plan. The plan will carefully consider vehicle numbers, movements (including ingress and egress) and parking and the impact on pedestrians, other road users, local residents and the environment. The plan will include appropriate mitigation measures in accordance with current best practise, where necessary.
- 7.2.10. Road closures will be avoided where practical however, for any necessary road closures, the Contractor shall follow the Councils' procedures and provide advance notification.
- 7.2.11. All deliveries and collections will be arranged to coincide with normal working hours with the aim of staggering vehicle movements to avoid queues.
- 7.2.12. The size of the plant and construction methods employed could reflect the access constraints. For example, excavation will be achieved by using small plant and piling could be achieved using a demountable piling rig.

Dust, Noise & Vibration Mitigation

- 7.2.13. Noise, dust and vibration will be controlled and managed by employing best practicable means in accordance with:
- The Health & Safety at Work Act 1974,
 - The Environment Protection Act 1990,
 - Construction, Design and Management Regulations 2015, and
 - The Clean Air Act 1993.
- 7.2.14. The contractor will be required to implement measures to minimise noise, dust and vibration impacts, in accordance with current best practice. Measures will be approved by the Council prior to works commencing, and are likely to include (but not limited to):
- Selection of suitable plant with lower published sound levels,
 - Avoiding inherently noisy activities such as driven piles, use of large excavators etc,

- Consider the use of acoustic screens and covers,
- Noise, vibration and dust monitoring, if necessary,
- Use of water as a dust suppressant where applicable,
- Appropriate storage including suitable covers for skips,
- Use of suitable measures to minimise site runoff and protect surface water drains from contaminated, silty runoff (in accordance with CIRIA technical guidance), and
- Attempts to wash and clean vehicles before leaving site and to ensure that vehicles are not left idling.

Other Measures to Limit Impact

7.2.15. The contractor shall be required to sign up to the Considerate Constructors Scheme (or similar scheme), which requires all contractors to demonstrate due diligence and commitment toward minimising environmental disturbance to local residents. The works will also be completed in accordance with the scheme's standards.

7.2.16. All temporary development works will be designed by a structural engineer with appropriate qualifications and informed by a geotechnical investigation as described above.

7.3. Ground Movement and Damage Impact Assessment

7.3.1. A ground movement and damage impact assessment will be carried out following the site investigation.

7.4. Control of Construction Works

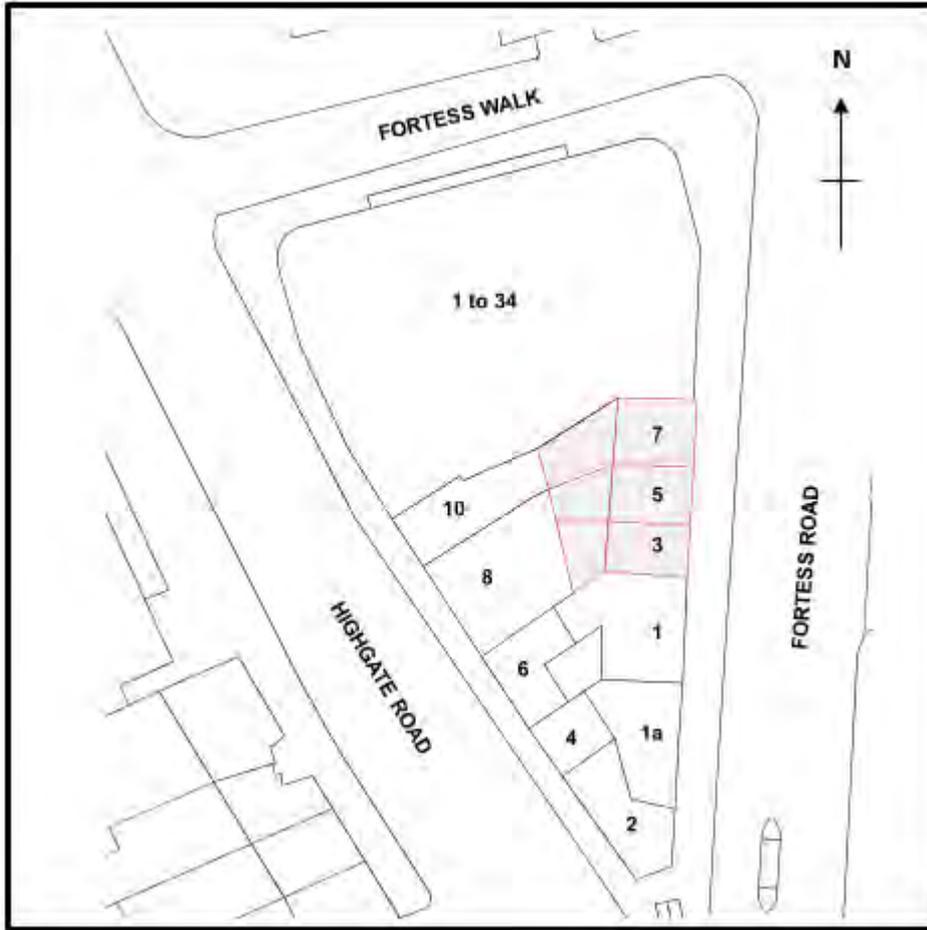

7.4.1. Movements of nearby structures should be monitored throughout the works, the results regularly reviewed and if required, actions taken to mitigate movements greater than anticipated.

8.0 Basement Impact Assessment

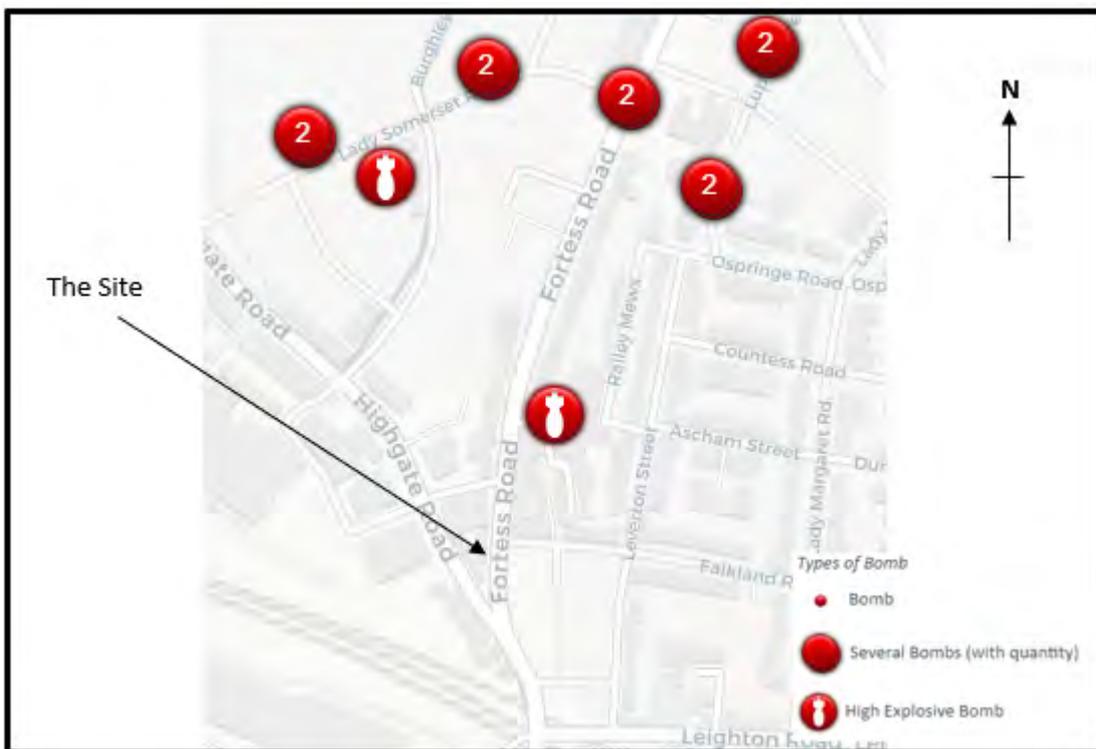

- 8.1.1. It is considered that the proposed development is a “Category A” development which is defined as: “Residential or commercial development with single storey basement where the Screening Stage of the Basement Impact Assessment indicates no matters of concern which need further investigation. Submitted BIA anticipates no significant impact relating to: land stability or impacts, buildings or infrastructure and groundwater flow or surface water flooding and underground tunnels.”
- 8.1.2. The screening stage completed in Chapter 4 indicated no significant impacts that require immediate investigation.
- 8.1.3. It is not possible to carry out a site investigation at this time due to the structural instability of the existing building and due to major access constraints. It is considered that the further investigation will be undertaken once the site has been cleared of the existing structures, including status of neighbouring party wall foundations and soil conditions for foundation design.
- 8.1.4. The BIA could be further updated following the investigation as a condition of a successful decision notice.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

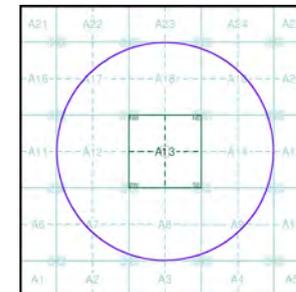

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

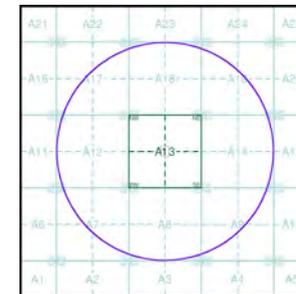

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

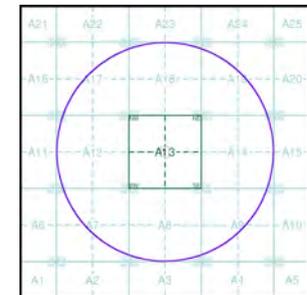

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

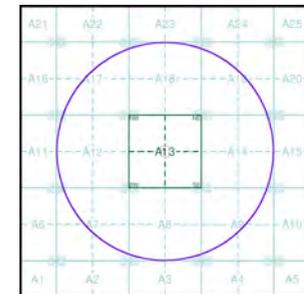

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

London

Published 1873 - 1875

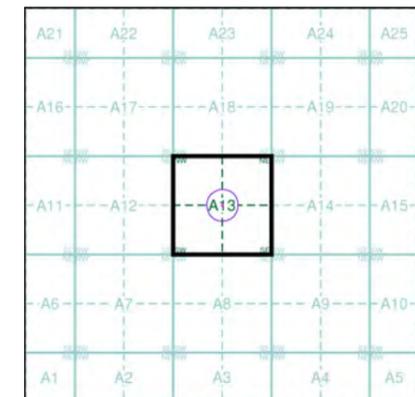

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Map Name(s) and Date(s)
