Subject: Tree pruning application

Dear Sir/Madame

I am writing to find out what is a procedure to prune 2 Ash trees in conservation area? The trees are located in back garden on the boundary between properties 13 and 15 Lancaster Grove, NW3 4EU

The trees are covered by Muchlenbeckia complexa climber and there where fallen branches found in the garden. The trees are on the nursery play ground area so it brings safety concern to my client.

I would like to remove the climber and while i am doing it reduce the hight of the trees around 2-3meters. I am sending pictures in attachments.

Thank you.
