WHAT IS A FIRE CURTAIN?

From architects to homeowners, Coopers domestic fire curtain barriers provide you with the means to help create modern, open plan living environments compliant with stringent fire regulations without compromising design. Sympathetic to interior aesthetics, the domestic fire curtain barrier will remain hidden until deployed and is used to replace non-loadbearing walls, fire doors and un-insulated glazing.

Increasingly specified by designers as an integral component for facilitating open plan environments, Coopers fire curtains are the modern alternative to heavy and cumbersome fire doors and is an aesthetically pleasing replacement for traditional, industrial looking shutters.

COOPERS DOMESTIC FIRE CURTAIN

WHAT A FIRE CURTAIN CAN REPLACE?

- Wall
- Door
- Glazing
- Serving Hatches
- Ceiling

FIRE CURTAIN APPLICATION

- Kitchen
- Hall & Lobby
- Loft & Cellar
- Laundry Shoot
- Serving Hatches
- Protecting non fire rated glazing forming a boundary protection
- Walls and floors forming a protective means of escape
- Skylight or Roof Lantern

APPLICATION

Coopers commitment to life safety has led us to develop a wide range of fire and smoke curtains approved to protect every type of building application.

You may wish to remove a wall and require a vertical fire curtain to protect a means of escape or install a horizontal fire curtain for compartmentation.

Our fire curtains provide a modern, non-invasive alternative to traditional fire protection.

COOPERS FIRE LTD.

Coopers Fire Limited is a British company manufacturing fire and smoke curtain barrier systems in the United Kingdom for installation worldwide. Coopers invented and patented the Gravity Fail Safe (GFS) Smoke and Fire Curtain, which has become the benchmark for most smoke and fire curtain systems sold around the world today.

Due to the high performance and reliability of Coopers products, they have been specified and installed in some of the world's landmark buildings like Buckingham Palace and Sydney Opera House.

COOPERS FIRE LTD. IS A SPECIALIST MANUFACTURER OF SMOKE AND FIRE CURTAIN BARRIER SYSTEMS.

COMPANY PROFILE

At Coopers, we're proud of the fact that every fire and smoke curtain and their key components are manufactured within the Cooper Group of Companies to ISO 9001 and ISO 14001 at our manufacturing plants in the United Kingdom.

ABOUT COOPERS

Coopers are dedicated to advancing fire and smoke barrier curtain technology and improving ways to safeguard life and property.

This commitment to developing innovative products that are robustly tested and independently certified has meant that Coopers has become the benchmark used by Regulators, Architects, Engineers and other Fire Professionals worldwide.

COMPLIANCE AND STANDARDS

At Coopers, our commitment to life safety is best expressed through our dedication to ensuring that our fire and smoke curtains meet the highest accreditations and standards.

This means that we test and manufacture every fire and smoke curtain in accordance with the toughest of internationally recognised accreditations, instilling our clients with confidence in fire protection equipment that they can trust.

BEFORE AND AFTER

The Coopers FireMaster fire curtain is an active fire curtain barrier that remain invisibly retracted until activated by an alarm or detector signal, at which time they descend safely to their fire operational position. The standard fabric used offers 120 minutes integrity.

THE ORIGINAL FIRE RATED BARRIER SOLUTION PROVIDING FIRE RATING FOR OPENINGS UP TO 30M WIDE

AFTER

Controls are custom made to be fully compatible with both existing alarm systems and the number of barrier units installed, whether single or multiple roller assemblies.

When an alarm signal is detected, the control panel will automatically trigger all the Barrier systems to deploy by controlled descent using our unique Total Gravity Fail-Safe (TGFS) system.

BUYING A FIRE CURTAIN

1. WHY WOULD I NEED A FIRE CURTAIN FOR MY HOME?

Your home is legally required to comply with stringent fire regulations designed to help protect you and your family from the deadly effects of fire and smoke. This legislation states that:

1. Your home needs to maintain a protected means of escape and / or;
2. Provide an effective means to compartmentalise a room or lobby (over a defined size) to contain a fire.

Enforced by a Building Control Body, meeting these regulations will determine whether your extension, renovations or new building project meets Building Control Approval.

2. WHAT STANDARD AND COMPLIANCE DO I NEED?

Standards are your best means of ensuring your fire curtain will protect you in the event of a fire. **If the fire curtain does not carry the correct certification, then it's very likely that it hasn't been tested to the correct standards, putting both your home and its occupants at risk.**

Furthermore, if the fire curtain doesn't meet the correct standards, your projects will fail to meet building control approval.

1. For protecting a means of an escape, it's vital that your fire curtain meets with PAS 121 and is certified to provide an Insulating Zone or tenable area. This stringent requirement is specifically designed to provide any occupants evacuating a building with protection from heat radiation.

2. If replacing a non-loadbearing wall, then ask for evidence that the fire curtain has achieved PAS 121 standards in accordance with BS EN certification.

3. Compartmentation of a large basement or kitchen/dining room again meet PAS 121 standards and must provide the required minutes protection from fire.

For advice on your project, it's important that you seek the professional advice of your appointed Approved Building Control Authority before you contact a fire curtain supplier.

3. SHOULD I SEEK DIRECTION FROM MY BUILDING CONTROL AUTHORITY?

Before you contact a fire curtain supplier, it's necessary to seek the advice of your appointed Building Control Body. This will quickly help you to establish the correct specification of the fire curtain you require and is the first step to guaranteeing that your project meets fire regulations.

Once you have a specification, which may include details regarding retractable button, smoke control and voice warning systems, it's time to contact a reputable supplier for a quotation.

4. WHAT IS TOTAL GRAVITY FAIL-SAFE AND DOES MY FIRE CURTAIN NEED IT?

Total Gravity Fail Safe or TGFS is a backup system designed to ensure that your fire curtain deploys to a closed position, even if your property suffers a power failure or mains short circuit.

For a fire curtain to be compliant with stringent fire regulations, TGFS must be fitted. TGFS systems are required by BS PAS 121 and its key to ensuring your fire curtain meets Building Authority approval.

5. WHAT HAPPENS AFTER MY FIRE CURTAIN HAS BEEN INSTALLED?

Much like a gas safety certificate, the organisation responsible for installing and commissioning your fire curtain is required to issue you with the correct certification. This commissioning certificate is to certify that your fire curtain has met the stipulated standards and has been installed by a third party approved installer and operates to fire regulations.

It is this documentation that Building Control Authorities and insurers commonly ask for for proof of regulatory compliance.

PRODUCT SELECTOR

This table should help assist you with the type of product required.

TO ASSIST IN THE FIRE RISK STRATEGY AND ASSESSMENT YOU SHOULD PROVIDE:

- A description of the building
- House or Flat, type of construction e.g. timber; type of roof e.g. tiled (a photograph of the front of the premises would be beneficial)
- How many floors has the building, if a flat/maisonette which floors does it occupy?
- Basement levels?
- Loft conversion, planned use?
- Floor plans of the building, including measurements. Show proposed open plan areas/use
- Access to the rear of the building or enclosed?
- Alternative Fire Escape?

AFTER CARE SERVICE

A fire curtain installed in your home is part of a 'Life Safety System' and once your manufacturer's warranty has expired, it is important to consider the ongoing maintenance of the equipment to ensure it remains in a fully operative state. Current Building Regulations and the Fire Safety Order place the responsibility on the occupier to ensure that all curtains are inspected regularly. Infringements may lead to prosecution.

Coopers Fire offer a specialist after care package that can be tailored to your specific requirements, by our dedicated service division. A number of aftercare products are available ranging from annual service inspections to a fully comprehensive total care package.

Our engineers can attend at, six monthly or annual intervals and all servicing is performed at pre arranged times to ensure the minimum of disruption. A programme of routine tests, check and adjustments is carried out which identifies any obvious problems, enabling appropriate remedial work to be planned, thereby reducing the need for more costly 'Emergency Call Outs'.

All our engineers are factory trained at our in house training facility and participate in an ongoing development scheme. Our fleet of service vehicles are fully equipped and carry a comprehensive range of spare parts to enable on the spot repairs in most instances.

PLANNED SERVICE IS AVAILABLE FOR
COOPERS FIRE LIFE SAFETY EQUIPMENT

ADDITIONAL BENEFITS

BUILDING CONTROL APPROVAL GUARANTEE

Coopers Fire guarantees that your installation will be approved by Building Control.

Coopers Fire are happy to get in contact with the authority that will underwrite your project. This is so we understand in the early stages what the fire curtain requirements are. Once understood, we can then advise on suitable products and quote accordingly.

Coopers Fire has never had an installation rejected by any Building Control body and guarantees that your installation will be approved by local Building Control or Approved Inspector or we'll give you your money back!

INSURANCE DETAILS

Insurance Compliant.

Coopers Fire is the only company in the UK to be independently accredited and registered by a UKAS accredited certification body. Coopers are covered for Employers Liability, Public and Products Liability and Professional Indemnity.

Employers Liability: £10,000,000
Public and Products Liability:
£10,000,000

BANK REFERENCE

We can provide a bank reference to support any advanced payments and deposits.

Coopers Fire have been trading for over 30 years but if you require further assurance that your money is safe, we can provide you with a pre-paid Bank reference application that will help ensure absolute peace of mind.

VAT ZERO RATING

Work on ordinary homes may be applied with reduced-rated or zero-rated VAT.

Much of the work that builders and similar trades-people do is standard-rated. But some types of work can be reduced-rated or zero-rated if certain conditions are met.

Fire and Smoke curtains are treated the same as the construction of the building rather than a fixture and fitting and therefore fall into the category of reduced-rated or zero-rated VAT where applicable.

SERVICE AND MAINTENANCE INFORMATION

If you would like to discuss your service requirements, or would like to request a no obligation quotation, please call free phone 0800 633 5224 or 02392 454 405 or email service@coopersfire.com

HELP WITH A QUOTATION

Coopers Fire can help you with a quotation by filling in some of the information that follows on the next four pages.

CHECKLIST

By asking your Building Control Officer or Approved Inspector to complete the Checklist will help us to understand what type of fire curtain you require.

CUSTOMER INFORMATION

The Customer Information will be used to stay in contact with you and also helps us to help you specify the correct curtain in working with your local Building Authority and / or your Building Control Officer or Approved Inspector.

SITE SURVEY FORMS

The Site Survey Forms are for a vertical fire curtain or a horizontal fire curtain. Please, fill in whichever is applicable to you.

The pages are perforated to easily detach and return to Coopers Fire (printed version only).
