

Proposed Front Elevation

Horizontal section of SVP will be hidden within the eaves space

15

13

11

SVP vented out from inside eaves and taken out through roof approx 8 tiles up from roofline. This will protrude from roof no more than 450mm and be hidden by parrapet wall. Using traditional lead slate and cowl

Pipework to emerge at top of vertical waste pipe to minimise any horizontal pipe runs. Pipework to avoid passing in front of white painted stone lintel.

New cast iron SVP added for top floor shower room and rain water pipe moved across to left. No existing SVP close enough to facilitate new shower room

Pipework is hidden in view along street by projecting bay windows
