2019/2223/L	Luisa Auletta	22/05/2019 11:31:55	SUPPRT	This is a very carefully considered set of proposals which address the specific time-limited issue of excessive construction noise caused by HS2. The secondary glazing solutions (both internal and external) have been sensitively developed to minimise harm to the II* building whilst ensuring continued habitability. All installations are fully reversible. As a consequence I strongly support the application and suggest that it should be used as an exemplar for other houses where similar issues are encountered with specific window types.
