

3 - Noise concern - window of new first floor extension noise concerns due to proximity to our home, especially given the age of 4 Falkland place and its wall thickness. In addition, the vent for our Kitchen extractor faces out towards the new extension and sound can enter. Building workers voices were clearly audible inside our kitchen/living room when speaking in this area, and a new room and window in the same position concerns us

4 - Privacy /noise - Strong objection to use of any flat rooves as roof terraces. In addition to noise and privacy concerns already raised, part of the flat roof is directly outside our living room window. (see images 4A,4B,4C,4D)

We would be very happy for a planning officer to come to our home to inspect the points raised in person.

Many thanks

B White

4 Falkland place

original wall and its windows were farther back than it is now

new window has line of sight into our courtyard plus there are concerns about noise from it - its much closer than any of the original windows to our property
