

We now wish to employ GraftingGardeners
<http://www.graftinggardeners.co.uk> to carry out the work on our prunus tree in our front garden, photo attached. We have used this firm before for our own back garden and are pleased with the quality of their work.

They will reduce the tree by approximately 30% which will reduce the height, which is currently blocking light and air from the upper flats of No 17 and 15 Langland Gdns, and some of the lower side branches which are affecting the light and air coming into the basement flat.

It's difficult to be more precise about the percentage that will end up actually being cut, and not easy to remember exactly how big the tree was in 2010, but I can assure you that we shall do whatever we can to retain the appearance of the tree. It's not important for the tree to end up exactly as it was before the 2010 reduction, and we are pretty sure that 30% from how it is now will be perfectly adequate,

I hope you will accept our request to register for these works, and please feel free to come round any time and see the tree for yourself so we can meet and discuss it in more detail if you wish.

Thank you for your help.

Kind regards
Elaine
