

6.0 Canopy Glazing

6.1 Since submission the applicant has worked to develop the design detail of the glazing to the underside of the Filling Station canopy.

The key changes to the Canopy glazing are;

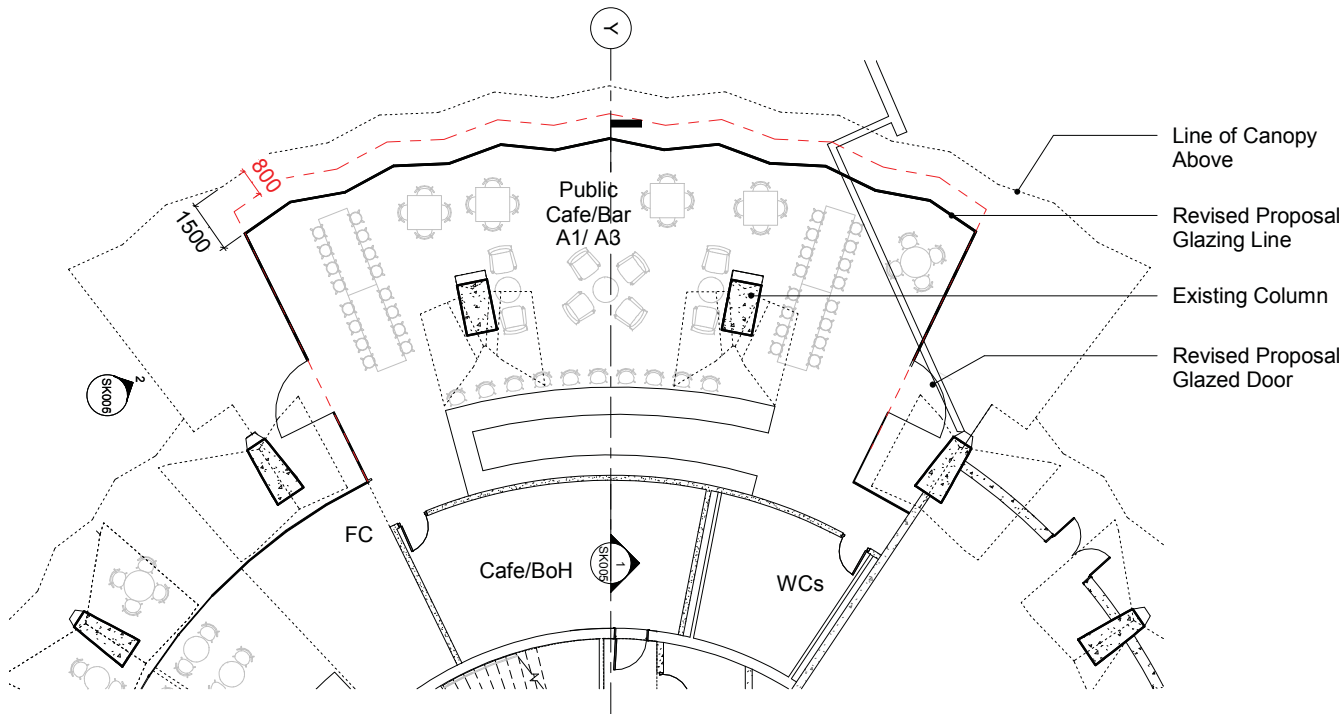

- 1. Setting back of the canopy glass increased to allow 1500mm from the front face of the canopy to the glazing line.
- 2. 2No. frameless glass doors added to either side of the enclosure.
- 3. Thermal insulation added to the soffit behind the canopy to increase thermal performance

SEFAR Mesh Interlayer Details illustrating solid appearance in built projects and ability to print mesh to RAL colours

SEFAR Mesh Interlayer - Shell Centre Precedent

## 7.0 Glazing Replacement

7.1 As proposed at submission the proposals seek to ensure the long term future of the building by replacing all existing fenestration to the tower and Kingsway blocks. The proposed glazing units will match the pattern and proportion of the existing fenestration, however it will comprise of an opening fan light, two fixed panes, an extruded aluminium transom to match existing, and a fixed pane below with a SEFAR mesh interlayer to replace the solid fibreboard material within the existing configuration.

Glazing the lower fixed pane will increase natural daylight and views internally, improving the quality of the office space to be delivered. Externally the pane will continue to give the facade its 'tartan' and solid appearance due to the reflective nature of the material.

The colouring of the lower pane will be achieved by either screen printing the mesh in a RAL to match or using a grey body tint glass on the external pane in the DG unit. Site sampling will be undertaken to ascertain which of these two approaches will achieve the closest match.

The window frame will be of a silver anodised finish – to match the existing window framing.

Therefore no changes to submitted drawings are proposed in respect of this element of the scheme.

## 8.0 Conclusion

This Substitution Pack has demonstrated the proposed design revisions to the scheme bought about as a result of thorough consultation with Camden's planning, conservation and design officers throughout the applications' determination period (refs: 2019/2773/P and 2019/2790/L).

The design revisions are positive and have resulted in an overall improvement to the design of the Proposed Development and will ensure that all the public benefits of the proposals identified at submission stage can be delivered."
