Subject: new CMP proposals: lorry flows to site

I would like to see some convincing and reassuring plan as to what to do with a giant lorry IF, say, it is held up by road works closure, accident or other congestion, say between the Hendon Way/Finchley Road junction, and the Swiss Cottage point of delivery. Would such a giant lorry be marooned, for example, across some other road junction intensifying the overall congestion? Might the "congested lorry" be held in some adequate area off road - WHERE? It may be advisable for supply by giant lorries to be replaced by smaller lorries - for sake of the above mentioned potential difficulty.

Are there figures which show how often the A41 gets blocked, and at what times? Can the CMP work around such anticipated difficulties?
