

BS 5837: TREE CATEGORY GUIDE

Category U: Unsuitable for retention, trees with less than 10 years life expectancy.

Category A: high quality trees, able to make a substantial contribution for at least 40 years, normally retained unless there is an over-riding reason for removal and appropriate mitigation.

Category B: moderate quality trees, able to make a significant contribution for at least 20 years, normally retained.

Category B/C: an intermediate category between categories B and C (not specifically described in BS5837). Trees, which should be retained wherever possible, providing retention does not significantly constrain the layout.

Category C: low quality, in adequate condition to remain for at least 10 years, or young trees <150mm stem diameter. Trees which can be removed to allow the desired layout or new planting.

APPENDIX A

Key

- Category U
- Category A
- Category B
- Category C
- Crown spread: retained trees
- Trees For Removal
- Root Protection Area
- BS 5837 Shade Area
- No Dig Construction

If T1 is retained, will need No-Dig construction in this area. New build will cover 17% of the RPA which is less than the 20% max recommended

BS58837 Shade Area - area in which shading of living accommodation may affect sustainability of trees ie. need to justify why future owners would not pressurise to remove/reduce the tree.

Proposed new build (in orange)

Existing shed (in grey)

1.6m brick boundary wall- foundations will be restricting root growth, so have offset RPAs by 20% away from wall
