2019/6063/P	Jonathan Byatt	10/01/2020 18:01:34	SUPC	Can the owner developers please work with Camden's gardening contractors to explore any reuse or recycling of plants which may be affected by this application? In this way currants healthy plants can be recycled, allowing their air pollution reduction properties to be retained, at little or no cost to Camden. Estates such as South End close would benefit from additional shrubbery to improve the quality of life and reduce the pollution in this high traffic area. This is often the case for many Campden Estates which are otherwise nearly grass or well trodden Earth all concrete.
