Damage relating to the claim

The damage is indicative of slight downward movement and rotational movement of the front elevation, relative to the remainder of the building.

It is common practice to categorise the structural significance of the damage, in this instance the damage falls into category 2 and would be classified as slight.

Category 0	Negligible	<0.1mm
Category 1	Very Slight	0.1 - 1mm
Category 2	Slight	>1 but <5mm
Category 3	Moderate	>5 but <15mm
Category 4	Severe	>15 but <25mm
Category 5	Very Severe	>25 mm

Cause

The pattern and type of cracking would suggest that the damage has resulted from subsidence of the site. The most likely cause of subsidence is the shrinkage of underlying soils due to seasonal variations in moisture content. This will have been exacerbated by the moisture extracted by the roots of the nearby vegetation.

Policy Liability

In view that the damage to the property is considered to be as a result of an insured event, a valid claim arises under the terms of the policy cover, subject to the applicable excess.

What will happen next

We will now arrange for site investigations to be carried out, to consider the claim further, please allow for up to two months for this to take place.

Remedial Work

It is most likely that stability will be regained once the vegetation has been removed or reduced. Once stability has been regained, we will agree how to settle your claim. It is possible that further damage may develop while mitigation is being arranged.

On simple claims (damage less than 5mm) once any necessary mitigation is complete we can settle your claim with a cash payment less the policy excess amount.
