1.0 EXECUTIVE SUMMARY

Site Location	111 Canfield Gardens, London, NW6 3DY
Client	Mr Guy Ziser
Proposed Development	It is proposed to extend the existing basement to create an underground garage below the front garden, complete with car lift.
Historic and Current Activities	From historical map evidence it would appear that the site was first built on between 1871 and 1896, with minor changes taking place to the property since its construction. The surrounding area has been residential from the end of the 19th century.
Environmental Setting	<p>The 1:50000 Geological Survey of Great Britain (England and Wales) covering the area indicates the site to be underlain by the London Clay Formation.</p> <p>The Bedrock geology underlying the site has been classified as Unproductive Strata.</p> <p>A Zone II (Outer Protection Zone) Groundwater Source Protection Zone is evident 781m east of the site.</p> <p>There are 4 non-potable water abstraction licences within 1 kilometre of the site. All four are located 950m east of the site.</p> <p>The closest surface water feature is located 967m east of the site.</p> <p>There are no sensitive land issues within 1 kilometre of the site.</p> <p>There are no landfills within 1 kilometre of the site.</p>
Potential Contamination Sources	<p>On Site Sources: No Sources</p> <p>Off Site Sources: Garages, Infilled Ponds, Clothing and Fabric Manufacturers, Laboratory</p>
Previous Investigations	There are no previous relevant investigations.
Potential Risks	<p>Human health:</p> <ul style="list-style-type: none"> Inhalation of vapours Workforce Direct contact <p>Buildings / service materials:</p> <ul style="list-style-type: none"> Direct contact <p>Site flora / ecosystems</p>
Recommendation	<p>Undertake a quantitative risk assessment (site investigation) with the following objectives:</p> <p>Provide information for further characterisation of the site in relation to potential pollution from local industry.</p> <p>Provide information for further characterisation of the site in relation to potential ground gas.</p>

2.0 INTRODUCTION

2.1 Project Objectives

At the request of Martin Redston Associates, working on behalf of Mr Guy Ziser, a preliminary risk assessment was carried out to develop an outline conceptual model and to establish whether or not there are any potentially unacceptable risks arising from potential contamination at the above site in reference to the proposed development with potential impact on sensitive receptors, such as human health, controlled waters, ecological features, building structures and services.

The scope of the investigation was outlined in the SAS quotation reference Q11527B, dated 9th October 2019.

The information was required for a qualitative risk assessment of the potential for contamination at the site and to evaluate whether any remediation may be required for the protection of the end-user and other sensitive receptors from the presence of potential contamination.

The investigation is required by the London Borough of Camden under planning regulations.

The project objectives include the following aims:

- To assess the presence, extent and nature of potential risk of pollution to end-users of the site, controlled waters and other potentially sensitive receptors.
- To undertake a qualitative environmental risk assessment of the site and surroundings.
- To identify further works, if any, needed to further assess, manage or mitigate any potential risks.
- To provide information relevant for planning approval.

This report comprises a Phase 1 - Preliminary Risk Assessment to assess the potential for the presence of potential contamination on site and to identify potential receptors.

Planning permission granted by councils for development of Brownfield often have conditions attached which require the following site investigation to be undertaken and submitted to the local authority for approval:

1. Phase 1 - Preliminary Risk Assessment
2. Phase 2 - Intrusive Investigation
3. Phase 3 - Remediation Strategy
4. Phase 4 - Validation Report

This Phase 1 - Preliminary Risk Assessment is to be submitted to planning for approval.

2.2 Scope of works

A preliminary risk assessment comprising a Phase 1 Land Quality Assessment (a desk study and site survey) has been undertaken and is summarised as follows:

1. A review of current activities and conditions at the site based on information from the Client, regulatory data and the results of a site walkover survey.
2. A review of the history of the site and surrounding area from historical maps and available anecdotal information.
3. An assessment of geological, hydrological and hydrogeological information pertaining to the site.
4. The development of a site conceptual model identifying potential sources, pathways, receptors and linkages, a preliminary qualitative risk assessment and identification of unacceptable risks.
5. Recommendations for further works, if necessary.

The site works were performed in accordance with the methods given in BS 5930+A2:2010 and BS EN ISO 22476-2&3:2005. The work was carried out in accordance with the methodologies detailed in CLR11: Model Procedures for the Management of Land Contamination.

The recommendations and comments given in this report are based on the information contained from the sources cited and may include information provided by the Client and other parties including anecdotal information. It must be noted that there may be special conditions prevailing at the site which have not been disclosed by the investigation and which have not been taken into account in the report. No liability can be accepted should such conditions alter the recommendations made in this report.

This report does not constitute a full environmental audit of either the site or its immediate environs.

2.3 Details of research undertaken

A number of database searches have been undertaken, soliciting information of the current and historical uses of the site and surrounding area in order to complete a qualitative risk assessment associated with the development of the site. These include:

- Environmental Data Search 1:10000
- Environmental Data Search 1:2500
- Site Sensitivity Maps and Data Sheets
- Historical Maps
- Local Council consultation
- Consultation with the Client / Architect / Site representatives
- Google Search

2.4 Report Limitations

This report is prepared for Mr Guy Ziser (herein called the 'Client'), for purposes agreed and in accordance with the terms and conditions set out in the Agreement between Site Analytical Services Limited and the Client.

This report refers, within the limitations stated, to the condition of the site at the time of the inspections. No warranty is given as to the possibility of future changes in the condition of the site.

The comments given in this report, and the opinions expressed herein, are based upon the readily available information collated for the report and an assessment based upon the current UK guidance, primarily the Contaminated Land Research (CLR) Reports and most importantly CLR Report 11.

This report has been prepared for the sole use of the Client for the purposes described and no extended duty of care to any third party is implied or offered. Third parties using any information contained within this report do so at their own risk.

The accuracy of any map extracts cannot be guaranteed. It is possible that different conditions existed on-site, between and subsequent to the various map surveys appended.

Whilst the report may express an opinion on possible configurations of strata between or beyond exploratory holes discussed or on the possible presence of features based on visual, verbal or published evidence, this is for guidance only and no liability can be accepted for its accuracy.

The conceptual model is based on the information available at the time of conducting this assessment and is an interpretative assessment of the conditions at the site. It should be noted that the redevelopment and/or further investigation of the site may reveal additional information and therefore alter the conceptual model and the conclusion of this report.

There may be other sources of information not included in those listed that hold data relevant to the Phase I Desk Study undertaken at the site that could materially affect the conclusions made in this report.

This report is prepared and written for the use stated herein; it should not be used for any other purposes without reference to Site Analytical Services Limited. The report has been prepared in relation to the proposed end-use and should another end-use be intended a further re-assessment may be required.

2.5 Confidentiality, Copyright and Reproduction

This document has been prepared by Site Analytical Services Limited in connection with a contract to supply goods and/or services and is submitted only on the basis of strict confidentiality. The contents must not be disclosed to third parties other than in accordance with the terms of the contract.

Site Analytical Services Limited accepts no responsibility whatsoever to third parties to whom this report, or any part thereof, is made known. Any such party relies upon the report at their own risk.

3.0 SITE DETAILS

(National Grid Reference: TQ-257843)

3.1 Site Location

111 Canfield Gardens is a residential property, located on the southern side of Canfield Gardens, South Hampstead at approximate postcode NW6 3DY. The residential dwelling has five levels of accommodation; basement, ground floor, first floor, second floor and third floor loft conversion.

The site covers an approximate area of 0.07 Hectares with the general area being under the authority of the London Borough of Camden.

The site location map is presented in Appendix A of this report.

3.2 Current use of the site and surrounding land uses

The site is currently a residential dwelling. The site is located on the southern side of Canfield Gardens with residential properties to the south, east and west with a roadway to the north.

A current site plan is presented as Figure 1 in this report.

3.3 Site Walkover

The site was attended on 12th December 2019 for the purposes of conducting the site walkover. The site photographs have been included within Appendix B.

<p>Current use of the site</p> <p>The site is currently used residentially and comprises five levels of accommodation: basement, ground, first, second and third as a loft conversion.</p>
<p>Structures or past structures</p> <p>The site comprises one building with five levels of accommodation. A balcony is constructed on the first floor, facing north (front of the house). There is a single storey extension to the rear of the property.</p>
<p>Site covering</p> <p>The front of the site is completely hard landscaped in the form of concrete paving. The rear of the property comprises a tiled porch around the immediate perimeter of the site building, with the rest of the rear garden soft landscaped in the form of a grass lawn.</p>
<p>On site Vegetation</p> <p>The front of the property contains four large trees. Vegetation is present around the perimeter fence of the rear garden and comprises small to large trees and bushes.</p>
<p>Site topography</p> <p>The site topography is flat.</p>

Potential Contamination Sources None noted.
Visual or olfactory signs of contamination None noted.
Drainage / services or past services There is not considered to be a significant potential from on-site drainage / services to cause contamination on site. There are not any obvious preferential pathways resulting from the presence of services that may connect possible contamination on site with receptors on and / off site.
Water courses There were no obvious water courses on site or adjacent to the site.

From the walkover there are no potential sources of contamination on the site which appears to be a well-maintained residential property.

3.4 Details of intended future uses of the site

At the time of reporting of January 2020, it is proposed to extend the existing basement to create an underground garage below the front garden, complete with car lift.

The proposed development plan has been provided in Figure 2. In compiling this report reliance was placed on drawing number NW6_111CG_PP01, dated August 2019 and was prepared by Willingale Associates Architects and Development Consultants. Any change or deviation from the scheme outlined could invalidate the recommendations presented within this report.

3.5 References of planning applications

There are no recent planning applications with reference to the site on the London Borough of Camden planning portal.

4.0 ENVIRONMENTAL SETTING

4.1 Anticipated Geology

The 1:50000 Geological Survey of Great Britain (England and Wales) covering the area indicates the site to be underlain by the London Clay Formation.

4.1.1 London Clay

London Clay comprises a stiff grey fissured clay, weathering to brown near surface. Concretions of argillaceous limestone in nodular form (Claystones) occur throughout the formation. Crystals of gypsum (Selenite) are often found within the weathered part of the London Clay and precautions against sulphate attack to concrete are sometimes required.

4.1.2 Historical Boreholes

The British Geological Survey maintains an archive of historical exploratory borehole logs throughout the UK. SAS Limited has searched the database and has found 9 boreholes located within 250m of the site.

The closest is located 200m south-west of the site and indicates the area to be surfaced by 1.25m of Made Ground over the London Clay Formation to the maximum depth of excavation at 10.00m.

The records of the British Geological Survey indicate the following:

Ground Stability Hazard	Risk Assessment
Collapsible Ground	Very low
Compressible Ground	No hazard
Ground Dissolution	No hazard
Landslide	Very low
Running Sand	Very low
Shrinking or swelling clay	Moderate
Coal Mining	Not affected

4.1.3 Natural Ground gases

Natural strata can present a source of ground gases, such as methane and carbon dioxide. The natural geological strata identified above are not considered to pose a ground gas risk.

The Site is not in a Radon Affected Area (as defined by the Health Protection Agency), as less than 1% of properties are above the action level set by the Health Protection Agency. According to BR211 (by the Building Research Establishment), Radon Protection Measures are not required for new properties in these areas.

4.2 Hydrogeology

4.2.1 Groundwater

The Environment Agency Groundwater Protection Policy uses aquifer designations that are consistent with the Water Framework Directive. These designations reflect the importance of aquifers in terms of groundwater as a resource (drinking water supply) and also their role in supporting surface water flows and wetland ecosystems.

The Bedrock geology underlying the site has been classified as Unproductive Strata; rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow.

An Unproductive Strata designation was noted on-site and therefore controlled water is not considered to be vulnerable to potential contaminants that may be present on-site.

Considering the thickness of London Clay, it is considered that the potential for pollutants, if present, to interact with the underlying Chalk aquifer would be minimal.

Any works or development, which may have an impact on surface water, aquifer or groundwater quality, must be approved by the Environment Agency prior to implementation.

4.2.2 Water Abstractions

A Zone II (Outer Protection Zone) Groundwater Source Protection Zone is evident 781m east of the site.

There are 4 non-potable water abstraction licences within 1 kilometre of the site. All four are located 950m east of the site and relates to municipal ground use including spray irrigation and general washing from groundwater. The permitted start date for these abstractions is the 5th December 2013.

There are no potable water abstraction licences within 1 kilometre of the site.

The water abstractions listed are not considered to be vulnerable to potential contaminants that may be present on-site.

4.3 Hydrology and Drainage

The closest surface water feature is located 967m east of the site. Due to the distance from the site, this not considered to be vulnerable to potential contaminants that may be present on-site.

The site is currently not located within 1 kilometre of an area at risk from extreme flooding from rivers or sea without defences (Zone 2) or an area at risk from rivers or sea without defences (Zone 3).

4.4 Sensitive Land Use

There are no sensitive land issues within 1 kilometre of the site.

4.5 Summary of potential environmental receptors

Receptor Type	Receptor(s)	Sensitivity	Comments
Groundwater / Water abstraction	Unproductive Aquifer	Low	Due to the presence of an Unproductive Aquifer beneath the site, the risk is low.
Surface water	967m E	Low	Due to the distance from the site, the risk is deemed low.
Sensitive land	N/A	Low	Due there being no sensitive land issues within 500 metres of the site the risk can be deemed low.

5.0 INFORMATION ON SITE HISTORY AND LOCAL INDUSTRY

5.1 Present Use and Activities

There are no entries in the contemporary trade directories on-site, there are 4 within 250m of the site, 64 within 500m and 414 within one kilometre of the site.

Industrial Data

Distance (m)	On Site	Within 250m
Current Industrial Data Entries	0	4

Entries within 250m

Trade	Distance (m)
Clothing & Fabrics - Manufacturers	115m NE

Note: Only trades likely to impact the underlying soil and/or groundwater and /or activities which are described in R&D Publication CLR8 – Potential Contaminants for the Assessment of Land have been selected. Dates not supplied, multiple entries of similar trades are not listed, and references considered to be office premises only are not listed.

Fuel Station Entries

There are 5 fuel stations recorded within 1 kilometre of the site. The closest is located 700m to the east of the site at 104a Finchley Road, Hampstead, London, NW8 0DH and its status is currently described as 'open'.

There are no Control of Major Accident Hazards (COMAH) sites, Explosive sites, Notification of Installations Handling Hazardous Substances (NIHHS), Planning Hazardous Substance Enforcements or Planning Hazardous Substance consents within 1 kilometre of the site.

There are 23 local authority pollution prevention and controls found within 1 kilometre of the site. The closest relates to local air pollution control and is located 297m to the north-west of the site at 12-13 West Hampstead Mews, London, NW6 3BB. The status of the site has been classified as 'application withdrawn'.

5.2 Landfill Sites and Waste

There are no BGS recorded landfill sites located within 1 kilometre of the site.

There is one recorded historical landfill site located within 1 kilometre of the site. It is located 496m north-east of the site.

There are no local authority recorded landfill sites located within 1 kilometre of the site.

There are no registered radioactive substances within 1 kilometre of the site.

There are no licenced waste management facilities (locations) within 1 kilometre of the site.

There are no licenced waste management facilities (landfill boundaries) within 1 kilometre of the site.

There are no integrated pollution control registered waste sites within 1 kilometre of the site.

There are 3 registered waste transfer sites within 1 kilometre of the site. It is located 513m north-west of the site and relates to the transfer of asbestos and electrical components. The current licence status is described as 'licence lapsed/ cancelled/ defunct/ not applicable/ surrendered/ cancelled'.

There is one waste treatment or disposal site located within 1 kilometre of the site. It is located 748m north-west of the site and relates to a scrapyards. The current licence status is described as 'licence lapsed/ cancelled/ defunct/ not applicable/ surrendered/ cancelled'.

5.3 Land raising or land filling

There is no evidence of any addition land-raising or filling of historical features (e.g. ponds, streams, small quarried, depressions, etc.) within 250m of the site which is not a landfill site as detailed above.

There are no obvious burial sites within 250m of the site.

5.4 Pollution Incidents and Discharge Consents

There have been no pollution incidents to controlled waters within 1 kilometre of the site.

There have been no discharge consents to controlled waters within 1 kilometre of the site.

There are no integrated pollution controls within 1 kilometre of the site.

5.5 Historical Maps

The site history was compiled from information available from a Landmark Envirocheck Report consisting of a series of past Ordnance Survey maps (scale 1:1,250 and 1:2,500 which are presented in Appendix C).

Date	Description of Site Use	Surrounding Site Use
1871	The site comprises undeveloped land within an area of agricultural fields.	<p>The surrounding areas to the site are extensively rural and comprise large expanses of agricultural or other, fields.</p> <p>There are small ponds located 110m west of the site, 250m north-east of the site, 290m east of the site and 350m south-west of the site.</p> <p>There is a residential area approximately 280m south-west of the site.</p>
1896	The current building on-site has been constructed and comprises a front and rear garden.	<p>The surrounding areas in all directions of the site have undergone substantial residential development.</p> <p>There is a railway line located 380m north-west of the site.</p> <p>All previously existing ponds have been infilled.</p>
1915	The site remains essentially unchanged. The site border on the map is offset by approximately 4m.	Further residential development has taken place within the surrounding areas.
1935	The site remains essentially unchanged. The site border on the map is offset by approximately 4m.	The surrounding area remains essentially unchanged.
1946-1949 Historical Aerial Photography	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.
1954	The site remains essentially unchanged.	<p>There are garages located 60m west, 70m north-west, 280m north-west, 240m south-west and 270m west of the site.</p> <p>There is a laboratory located 160m south-west of the site.</p>
1954-1978	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.
1955	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.

1960-1974	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.
1965-1974	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.
1973-1974	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.
1978-1990	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.
1991	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.
1992-1995	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.
1999- Aerial Photograph	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.
2019 Google Maps	The site remains essentially unchanged.	The surrounding area remains essentially unchanged.

5.5.1 Historical summary of site

Date	Site Development
1871	The site comprises undeveloped land within an area of agricultural fields.
1896	The current building on-site has been constructed and comprises a front and rear garden.

From historical map evidence it would appear that the site was first built on between 1871 and 1896, with minor changes taking place to the property since its construction. The surrounding area has been residential from the end of the 19th century.

5.6 WW2 Unexploded Ordnance Potential

The 'Bomb Sight' archive has identified areas within 150m of the site that have previously been targeted by WW2 bombings. Therefore, it should be considered that UXO may pose a risk to the site.

6.0 INFORMATION ON SITE DRAINAGE AND MAN MADE POTENTIAL POLLUTANT PATHWAYS

The site is in use as a residential property and as such drainage may be present under and surrounding the site buildings, which may potentially lead to lateral or vertical migration of potential pollutants on-site.

7.0 CONSULTATION WITH THE LOCAL AUTHORITY, THE ENVIRONMENT AGENCY, ETC.

Consultation with the Local Authority was undertaken via the council's online planning portal and archives.

Consultation with the Environment Agency has not been undertaken; however, the Environment Agency have been cited within the information of the Envirocheck report with reference to groundwater, surface water, authorised processes and licenced waste management issues.

There was no additional consultation with other bodies/sources undertaken.

The Canal & River Trust were not consulted regarding navigable rivers and canals and English Nature were not consulted regarding ecological systems; however, their databases have been cited within the information of the Envirocheck report.

8.0 REVIEW AND SUMMARY OF PREVIOUS REPORTS

There have not been any previous reports available to us at the time of writing.

9.0 OUTLINE CONCEPTUAL MODEL

In accordance with current UK guidance on land contamination risk assessment (CLR 11, Science Report – SC050021/SR3 and BS10175), the following conceptual site model has been generated for the subject site.

The purpose of the conceptual model is to identify:

- All potential source(s) of contamination at and / or within the immediate vicinity of the site.
- Any potentially sensitive receptor(s) which may be at risk from the above source(s).
- Any potential migration and / or exposure pathways which link the source(s) to the receptor(s).

Only if all three of the above elements are present i.e. a source-pathway-receptor, is a potential risk present. Such a relationship is termed a 'pollutant linkage'. The SCM describes in detail any potentially significant pollutant linkages present and justifies the exclusion of any potential pollutant linkages considered to be non-significant.

9.1 Contamination Sources

A review of the current and historical land uses indicated the potential contaminative land uses that may impact the site are similar to the following industries highlighted in DoE industry profiles for potential contaminants of concern.

On site sources:

Dates	Feature	Distance and Direction from the site (m)	Potential Contaminants	Potential impact on the site?
1871-present	No sources	On-site	None	No

Off Site Sources:

Dates	Feature	Distance and Direction from the site (m)	Industry Profile / Potential Contaminants	Potential impact on the site?
1954	Garages	60m W	Road vehicle servicing and repair: garages and filling stations: Chromium, Copper, Lead, Zinc, Asbestos, pH, Oil/Fuel Hydrocarbons, Aromatic Hydrocarbons, PAH's, Chlorinated Aliphatic Hydrocarbons, Organo-lead compounds.	Yes
1896	Infilled ponds	From 110m W	Potential Made Ground / potential ground gas	Yes
Recent	Clothing & Fabrics Manufacturers -	115m NE	Textile works and Dye works: Cadmium, Chromium, Copper, Mercury, Boron, Nitrate, Sulphate, Asbestos, pH, Phenols, Acetone, Oil/Fuel Hydrocarbons, Aromatic Hydrocarbons, Chlorinated Aliphatic Hydrocarbons, Dieldrin, PCB's.	Yes

1954	Laboratory	160m SW	Chemical Works: organic chemicals manufacturing works: Chromium, Copper, Lead, Nickel, Vanadium, Zinc, Arsenic, Free Cyanide, Sulphate, Asbestos, pH, Phenol Acetone, Aromatic Hydrocarbons, Chlorinated Aromatic Hydrocarbons.	Yes
------	------------	---------	--	-----

9.2 Contaminants of Concern

It is considered that a number of the contamination sources are similar to those highlighted in “DoE industry profiles for potential contaminants of concern” and those likely to be of concern can be summarised as follows:

- Metals and metalloids: Cadmium, Chromium, Copper, Lead, Selenium, Nickel, Vanadium, Zinc, Arsenic, Mercury, Boron
- Inorganic Compounds: Nitrate, Sulphate, Sulphide, Complex and Free Cyanide
- Organic compounds: Acetone, Oil/Fuel Hydrocarbons, Aromatic Hydrocarbons, PAH's, Chlorinated Aliphatic Hydrocarbons, PCB's, Organo-lead compounds.
- Other: Asbestos, pH, Ground gas

9.3 Receptors

The receptors / resources considered to be affected by identified contamination during the assessment included the following:

- Construction workers
- Future residential users
- Building materials and services
- Site flora / ecosystems
- Off-site receptors / neighbouring residents and property

9.4 Pollutant Linkages

The following tables illustrate the hypothesised Source - Pathway - Receptor linkages for exposure to possible contaminants associated with industrial activity in the area, the current site conditions and the proposed development.

The Conceptual Site Model summarizes all the potential sources/pathways/receptors at this site.

CIRIA Contaminated Land Risk Assessment Table					
Consequence					
		Severe	Medium	Mild	Minor
<i>Probability</i>	<i>High Likelihood</i>	<i>Very High Risk</i>	<i>High Risk</i>	<i>Moderate Risk</i>	<i>Moderate/Low Risk</i>
	<i>Likely</i>	<i>High Risk</i>	<i>Moderate Risk</i>	<i>Moderate/Low Risk</i>	<i>Low Risk</i>
	<i>Low Likelihood</i>	<i>Moderate Risk</i>	<i>Moderate/Low Risk</i>	<i>Low Risk</i>	<i>Very Low Risk</i>
	<i>Unlikely</i>	<i>Moderate/Low Risk</i>	<i>Low Risk</i>	<i>Very Low Risk</i>	<i>Very Low Risk</i>

Risk Classification Definitions (C552 CIRIA, 2001).

Risk classification definitions

Very High - There is a high probability that severe harm could arise to a designated receptor from an identified hazard, OR, there is evidence that severe harm to a designated receptor is currently happening. This risk, if realised, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required.

High - Harm is likely to arise to a designated receptor from an identified hazard. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term.

Moderate - It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.

Moderate / Low or Low - It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.

Very Low - There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

Area of Potential Concern (and contaminants of concern)	Potential Receptor	Potential Pathway to Receptor	Hazard (Potential Consequence)	Likelihood of Pollutant Linkage	Risk Assessment	Justification / Comments
<p>On site:</p> <p>No sources</p> <p>Off Site: Local industry including:</p> <p>Garages, Infilled Ponds, Clothing and Fabrics Manufacturers, Laboratory</p> <p>Metals and metalloids:</p> <p>Inorganic Compounds:</p> <p>Organic compounds:</p> <p>Ground gas</p>	Construction workers	Direct soil and dust ingestion Dermal contact Inhalation of dust Inhalation of vapours Inhalation of ground gases Fire and explosion	Acute and chronic toxicity, carcinogenic impact	Low Likelihood	Moderate Risk	Significant reconstruction is planned. As such, significant groundwork would be involved in the construction process. Additional investigation required.
	Future users – open landscaped areas. Off-site receptors/residents	Consumption of home-grown produce Dermal contact Inhalation of dust Inhalation of vapours	Acute and chronic toxicity, carcinogenic impact	Low Likelihood	Moderate Risk	The proposed development will have areas of soft landscaping. Additional investigation required.
	Future users – within building footprint	Inhalation of dust Inhalation of vapours Inhalation of ground gases Fire and explosion	Acute and chronic toxicity, carcinogenic impact	Low Likelihood	Moderate Risk	There potentially infilled ponds within 250m which may produce ground gas. Additional investigation required. .
	Unproductive Aquifer	Surface water run-off Migration downwards via granular soils Migration downwards via permeable soils and bedrock Migration via groundwater flows	Water pollution	Unlikely	Very Low Risk	The site is situated in on an Unproductive Aquifer. No Risk.
	Built materials and services Off-site buildings	Direct contact of concrete with concrete aggressive soils Direct contact with service supply pipes in contaminated soils Fire and explosion	Degradation	Low Likelihood	Moderate Risk	It is probable that future underground services and structures will come into contact with potentially impacted soils. Additional investigation required.
	Proposed flora / landscaping	Plant uptake and Phytotoxicity Plant uptake and ecotoxicological effects	Phytotoxicity	Low Likelihood	Moderate Risk	The proposed development will have areas of soft landscaping. Additional investigation required.

10.0 SITE CONCEPTUAL MODEL

Following the hypothesised Source - Pathway - Receptor linkages for exposure to possible contaminants as identified in the site conceptual model, the following possible unacceptable risks have been identified.

Potential Contaminants / Source	Pathway	Receptor	Site specific settings	Action Required
Made Ground/ Local Industry	Inhalation, ingestion and dermal contact.	Human Health Residential	Residential use with private gardens	Further action required – Further investigation
Made Ground/ Local Industry	Inhalation, ingestion and dermal contact	Human Health Workers	Workers and the general public should follow regulation on health and safety during development (HSE, 1991)	Further action required – Further investigation
Petrol filling station, Ruins, Infilled ponds	Through high permeability strata, fissures and shafts, and by Inhalation by humans	Human Health Inhalation of Gases	Potentially infilled ponds within 250m of the site	Further action required – Further investigation
Made Ground/ Local Industry	Leaching (direct precipitation, overland flow and through flow)	Shallow groundwater/ Surface Water	Non-Aquifer	No Risk. No further action required
Made Ground/ Local Industry	Negligible groundwater flow	Deep groundwater	Non-Aquifer	No Risk. No further action required
Made Ground/ Local Industry	Chemical attack, gas accumulation in buildings	Building structures/services	Potential for small amount of made ground	Further action required – Further investigation
Made Ground/ Local Industry	Uptake (root and stomata), ingestion, inhalation and dermal absorption by animal)	Ecological features (i.e. Flora and Fauna)	No significant Ecological system within 250m of the site.	No Risk. No further action required

11.0 SUGGESTED NEXT STEPS

The information from the preliminary risk assessment and site conceptual model has identified a number of potential unacceptable risks relating to sensitive receptors on-site.

Dependent on the scope of the proposed works on-site, it may be necessary to fully assess the potentially unacceptable risks, for which additional information would be required. We would suggest that the most viable method of assessment would be via a Quantitative Risk Assessment (Site Investigation) and the investigation would have the following objectives:

- Provide information for further characterisation of the site in relation to potential pollution from local industry.
- Provide information for further characterisation of the site in relation to potential ground gases on-site

An intrusive investigation may reveal on-site sources of contamination that were not established by the Phase I Desk Study and Site Walkover, and thus require modification of the conceptual model.

11.1 Proposed Further Site Works

The proposal is a combined environmental and geotechnical Intrusive Site Investigation in order to obtain further information about the site conditions.

Phase II Intrusive Investigation

The Preliminary CSM allows for the identification of the test parameters relevant to the investigation, though this may require modification or addition from the findings of the intrusive investigation. Phase II intrusive site investigation will be carried out in order to investigate and assess pollutant linkages identified in the preliminary Conceptual Site Model presented in Section 10. The works to be undertaken on the site would comprise (a) soil sampling that is appropriate to the potential sources and (b) testing for the potential contaminants given in the CSM or other sources identified during the intrusive investigation.

Geotechnical Site Investigation

The purpose of the geotechnical investigation will be to obtain data regarding engineering properties of the soils to enable the design of foundations, concrete, pavements and drainage. The works to be undertaken on the site would comprise (a) soil sampling, (b) drilling boreholes at selected locations within the site and to establish foundation design parameters.

The scope of any such investigation should be agreed with the Local Authority, Environment Agency and any other Interested Parties prior to commencement.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
