Additional SIMs

Published 1982

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1991

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

Client Details
Mr J Appleby, Construction Testing Solution Ltd,
Northdown House, Ashford Road, Harrietsham, Kent,

Conceptual Model Table

Source	Contaminants	Pathway	Receptor	Risk	Comments
Onsite	<ul style="list-style-type: none"> Possible contaminants in Made Ground due to unknown origin and composition. 	<ul style="list-style-type: none"> Ingestion of liquids, soils and soil-derived dusts; Inhalation of dusts; Dermal contact with liquids, soil matter and soil-derived dusts; and Migration through porous surface geology. 	Current and future users	Low	Low risk due to no significant current or historical on-site or off-site sources of contamination and limited exposure opportunities.
			Off-site users	Low	Low risk due to no significant current or historical on-site or off-site sources of contamination.
			Construction workers	Moderate	Moderate risk due to unknown origins and composition of Made Ground. However, no significant historical off-site sources of contamination were identified within 250m of the site. Good site practices and appropriate use of PPE could reduce this risk further.
			Controlled waters	Low	Low risk due to no significant current or historical on-site or off-site sources of contamination.
Offsite / Historical	<ul style="list-style-type: none"> Heavy metals; Hydrocarbons; Inorganic / organic contaminants; and Ground gas 	<ul style="list-style-type: none"> Migration through surface deposits and Made Ground; and Discharge of runoff. 	Controlled waters, buildings and services	Low	Low risk due to no significant current or historical on-site or off-site sources of contamination.
