

Existing Brickwork to Rear Elevation

The existing brickwork is varied and a combination of different colours including yellows and reds, the brickwork pattern is flemish bond. The existing brickwork will be steam cleaned and will appear slightly lighter when the works are finished. The existing mortar is cement based and the whole building will be repointed in the same mortar as the new extension to ensure continuity of appearance.

Sample - Stock Bricks

These bricks have a variety of tone, texture and appearance that complements the existing building.

Please note The sample panel shown in the photo depicts a stretcher bond which is incorrect. A revised sample panel will be provided on site with the correct flemish bond to match the existing building, this will be pointed in time ready to view on site.
