

DBR (London) Limited Support & monitoring Proposal 19 Well Road NW3 1LH

DBR
EST. 1990

- Install scaffold frame (no fixings allowed to structure) with softening between abutments and historic fabric. Scaffold frame to allow pedestrian access through archway. Install timber head tree off scaffold frame to support arch with non staining softening and protectafleece between timber head tree and historic fabric.
- Above structure to be installed to both outer arch (external side of timber door) and inner arch (internal side of timber door).
- Prior to installation of support structure carry out delaps inspection and install reversible tell tales at node points (ie arch springers, column caps etc) to monitor any displacement through suitable windows within temporary support structure during excavation works.
- Monitoring brief to be implemented during excavation works.

Walters Consultancy Ltd

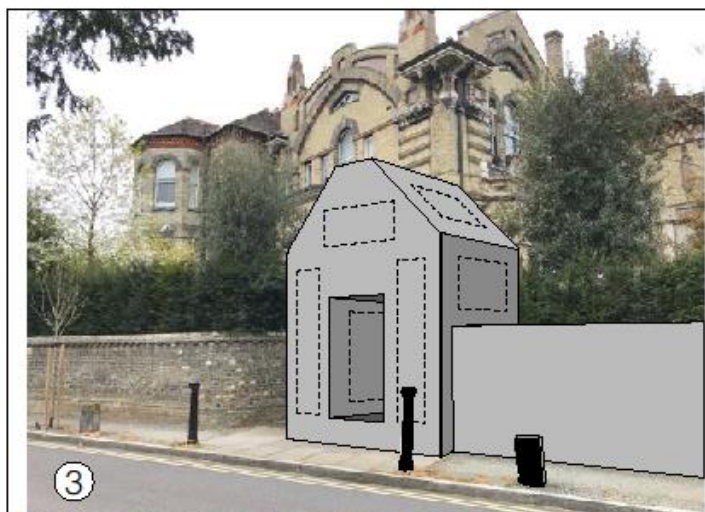

Protection Proposal

- ① EXISTING
- ② PROPOSED FRAMEWORK
- ③ PROPOSED CLADDING

Self supporting timber frame work constructed away from and encompassing all exterior sides and interior faces and continuing along the pavement boundary wall. Padding is to be tightly packed between the timber profile and the supported arch over. Openings for access indicated by white dashed line are shown

Plywood sheathing to be screwed to all faces. Exterior and side wall access panels as shown with dashed black line. Interior access panels (not shown) are to be fitted to the underside/soffit of the archway. A daily inspection to detect any movement in the structure is to be undertaken and a photographic record is to be maintained for the Conservation Officer

Copyright. Do not scale. All dimensions to be checked on site by contractor prior to manufacture and commencement of site works. All discrepancies to be reported to the Consultant
