

Mosquito Specifications

Voltage: 24v DC
Current: <500ma
Sound output: 4 selectable volume settings
Operation: Std 20-minute automatic cut-off. Continuous running for specialist applications
Frequency: Std high tone 17.6 KHz. Selectable 'all-age' tone 8 KHz
Operational range: Up to 30m depending on ambient noise level
Aux output: 12v DC 100mA regulated (e.g. external PIR)
Aux trigger: Selectable duration one and five minutes on trigger
Ext beep: Audible beep on / off selection on high tone operation
Protection: Vandal and weather resistant IP65 enclosure for external use
Temperature: -20 to +55C
Material: Diecast zinc alloy and steel
Mounting: Wall mounting, angle bracket available
Colour: Grey

The maximum volume of the Mosquito at one metre is 104 dB. Units are typically mounted above four metres, so the maximum volume at the ear is 97 dB, and at maximum range, significantly less and no louder than other sounds in our environment. The effect is achieved by the sound being repetitive and highly annoying at low volume levels.

The Mosquito is safe, legal and harmless. The safe use of the anti-social device to prevent unwanted behaviour is backed by several organisations. Here you can download and view various documents that verify its use in terms of its legality and harmless nature when installed in appropriate situations.
