GARDEN LIFT

From the outset, the design of the lift was to give direct access to the lower, southern garden.

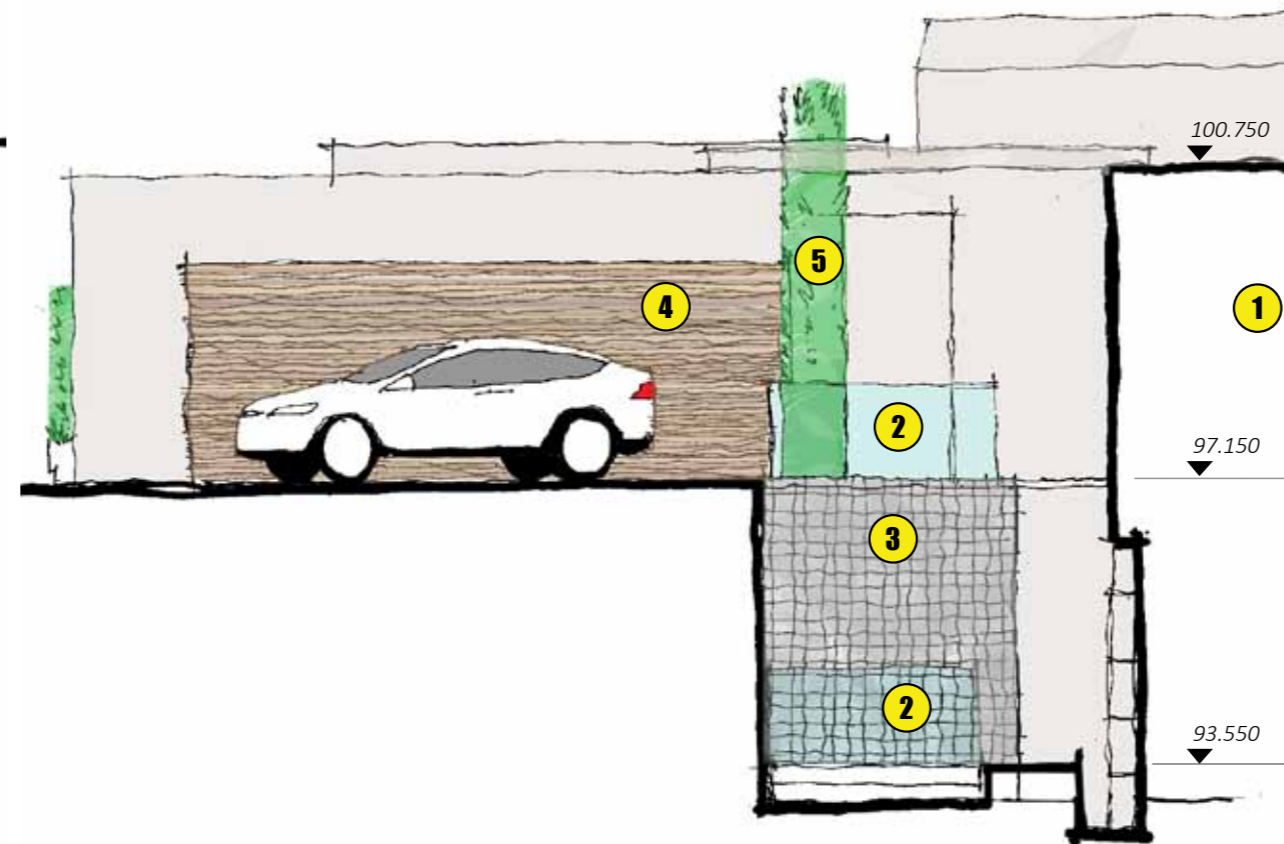

This allows maintenance equipment and garden waste quick transition between the levels, when necessary.

The platform is kept lightweight by using frameless glass, both around the driveway level entrance and around the carriage. The lift chimney walls will be lined with a high quality stone, giving continuity of materials between the exterior spaces, thus creating a feature wall when not in use, when viewed from the dining room.
