Sedum species in current Bauder XF301 Sedum vegetation blanket or similar:

- Sedum acre
- Sedum album 'Bella d' Inverno'
- Sedum album 'Coral Carpet'
- Sedum ewersii
- Sedum kamtschaticum subsp. Ellacombianum
- Sedum kamtschaticum var. floriferum 'Weihenstephaner Gold'
- Sedum montanum subsp. orientale
- Sedum pulchellum
- Sedum rupestre (reflexum)
- Sedum sexangulare
- Sedum spurium mesemlanthemum = Delosferma
- Sedum spurium mesemlanthemum = hallii
- Sedum verticillatum

There are currently 13 varieties used (dependent upon seed availability - see above).

The mix will vary from blanket to blanket, but we expect at least eight species present. The percentage mix of each species is also variable.

Most species are self-propagating, but there are also some that naturally seed and then die afterwards, but will return the following year.

Species develop according to the location. Inevitably, some species will dominate a site more than others and it is to be expected that accordingly some species may not survive long-term.

The key to maintaining variety is annual maintenance and fertilizer at the correct time, to keep all species happy. Please refer to scheme of maintenance.
