2020/1692/T		20/04/2020 13:47:08	OBJ	The felling of these 3 trees is not needed . The applictaion is trivial ... the trees can benefit from a professional pruning .... what is the point of Camden spending huge amounts of money each year planting trees if as fast as new ones are planted others are felled ... we need trees .they are are weapon fighting polution and climate change everyone knows that now ... please REFUSE this application .
2020/1692/T		21/04/2020 10:40:43	OBJ	This is one of a number of similar applications requesting removal of trees due to subsidence of nearby ground floor properties. Due to recent dry weather trees have been absorbing moisture through their roots from the London clay subsoil which is removed moisture causing shrinkage. This is an annual process as noted by this report and others. A number of these applications have come before the planning committee in recent weeks. The solution has always been removal of the offending trees without a clear reference to a policy strategy provided by Camden. Can this please be addressed? Multiple applications of this sort will continue to arise and will need to be managed in a consistent and transparent and nature. Can Camden and it's gardening and Engineering resources please produce a strategy which will provide a clear way to protect trees in line with the Camden carbon neutral policy but also to protect homeowners. In this way as much reuse and recycling of existing shrubs can be achieved with the potential for reuse across the borough in Camden estates and parks or open areas. This application is one which highlights the growing problem of similar applications which are currently dance with on a piecemeal basis but need an overall strategy.
