

<p>Is there any evidence of bomb damage on/close to the site?</p>	<p>London County Council (LCC) bomb damage mapping does not record any structures on site, or south of the site, to which damage could be attributed to. This is likely owing to the site being cleared/ under construction at the time the map was compiled.</p> <p>Approximately 60m south of the site area a number of residential properties on College Crescent are recorded to have sustained '<i>Total destruction</i>', adjacent to the north of which a number of properties are also recorded to have been '<i>Seriously damaged, but repairable at cost</i>'. It should also be noted that post-war historical OS mapping records three residential properties located approximately 50m west of the site as '<i>Ruins</i>', although there are no corresponding strikes noted on London bomb census mapping.</p> <p>The acquisition of WWII-era aerial photography, and local ARP records if available, would be required in order to determine the war-time conditions on and around the site.</p>
<p>To what degree would the site have been subject to access?</p>	<p>Owing to the unexploded oil bombs located in the vicinity of the site, evacuation protocol may have been initiated for a period of time in order to dispose of the bombs. Infrequent access may increase the likelihood that signs of UXO would have gone unnoticed and unreported.</p>
<p>To what degree has the site been developed post-WWII?</p>	<p>It is understood that no significant post-war development has taken place on site.</p>
<p>What is the nature and extent of the intrusive works proposed?</p>	<p>The nature and extent of works proposed was not available at the time of writing.</p>

Summary and Conclusions

During WWII, the site was located within the Metropolitan Borough of Hampstead. Home office statistics indicate that Hampstead sustained an overall very high density of bombing, with an average of 166 items of ordnance recorded per 1,000 acres. London bomb census mapping records a number of unexploded oil bombs in the vicinity of the site, including one which is located adjacent to the east of the proposed site on College Crescent.

LCC bomb damage mapping does not record any structures on site to which damage could be attributed, potentially due to the site being cleared or under construction at the time the LCC map was drawn. Post-war historical OS mapping also notes three ruins approximately 50m west of the site, although no corresponding incidents are noted on London bomb census mapping. WWII-era aerial photography would be required in order to determine exactly what was on site during the war years, and to confirm whether or not the structures sustained any damage.

Recommendations

Given the findings of this preliminary report further research is recommended in the form of a **Detailed UXO Risk** assessment in accordance with CIRIA guidelines. Further research is recommended in order to better assess the wartime conditions within the site and its vicinity. This would involve the acquisition of additional historical documentation, including any available incident records and WWII-era photography.

Prior to or in lieu of a Detailed Assessment, it is recommended that appropriate UXO Risk Mitigation Measures are provided for intrusive works proposed.

If the client has any anecdotal or empirical evidence of UXO risk on site, please contact 1st Line Defence.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
