

Design notes:

This drawing shows the top and front view of the bench, feature wall, planters and the fence behind.

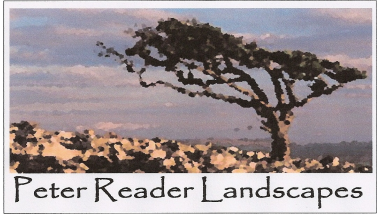

As can be seen the standard 1.8 fence runs behind the whole structure and continues around the whole garden. At this section though, from where the fence emerges from the side of the house, through to where the fence disappears behind the gym, the fence is clad in Western Red Cedar/Iroko horizontal trellis.

Planting, including small trees in both planters on each side of the bench softens the appearance of the wall and at night these will be up-lit to create an attractive effect. There will be an LED strip light under the lip of the bench highlighting this and other small uplighters up the wall to create an attractive glow of light to the area. The sculpture will be mounted in the centre of the wall with its bottom edge at about 1300mm to ensure that it is clear of peoples heads when sitting on the bench.
