Dear Sirs

Root ID

The sample you sent in relation to the above has been examined. The structure was referable as follows:

| TH1, 0.7m | | |
|-----------|---|---|
| 1 no. | Examined root: a member of the monocotyledon group of plants, woody examples being Bamboos, Palms, Agaves, Yuccas and Cordylines. | Inconclusive Iodine test* on this occasion. |

I trust this is of help. Please call us if you have any queries; our Invoice is enclosed.

Yours faithfully

Dr Ian B K Richardson

*

Based mainly on the Iodine test for starch. Starch is present in some cells of a living woody root, but is more or less rapidly broken down by soil micro-organisms on death of the root, sometimes before decay is evident. This result need not reflect the state of the parent tree.
