## 1.0 Introduction

We are proposing to install the Car Park Barrier which will be supplied and installed by WLS as per below attached technical data sheets.

**2.00 Manufacturer/Supplier Content**

Released for Procurement (A)

## Technical Submission

No: 07	Barrier
--------	---------

Project Name:	Mount Pleasant Phase 1	Project Ref:	LD121
---------------	------------------------	--------------	-------

### Copy To:

Company:	Cilantro MEP	FAO:	Keith Burke
Company:	Cilantro MEP	FAO:	Rory Nally

Description	Technical Submission
-------------	----------------------

<p>We will be supplying and installing a new 2 way barrier system with traffic lights to the car park. This will be installed at the top of the ramp with separate in and out barriers. The barrier will incorporate safety devices to minimize the risk of the barrier hitting vehicles.</p> <p>Users will have a keyfob to allow entry. Should the keyfob not work a new Telguard intercom will be provided to call the RMG security control room.</p> <p>On exiting the premises, a ground loop will be installed to allow free pass for all vehicles.</p> <p>The barrier is for vehicle use only, not cyclists or pedestrians due to safety reasons.</p>	<ol style="list-style-type: none"> <li>1. Barrier</li> <li>2. Vehicle Sensor</li> <li>3. Traffic Lights</li> <li>4. Intercom</li> </ol>

**620**  
Hydraulic barrier system for beams up to 5m

THE 620 AUTOMATIC BARRIER SUITABLE FOR BEAMS UP TO 5M.  
AVAILABLE IN STANDARD OR RAPID VERSIONS

- The 620 standard has a duty cycle of 70% and will support a 5m beam and bottom skirt with an opening/closing speed of 3.5 to 4.5 seconds.
- The 620 Rapid offers a rectangular beam length of up to 4m with an opening/closing speed of 2 to 3 seconds. Round beams are available up to 3m.
- The 620 Super Rapid will support a 3m beam and operate on 0.8 seconds.
- All barriers have built in electronic slowdown to prolong the life of the barrier.
- The 624 BLD control board has a built in dual loop detector.

Fork support

Adjustable fork support with mag lock

Adjustable pogo stick

New round beam with optional inbuilt LED lighting available up to 5m, (3m on rapid versions)

Dimensions of the standard and rapid units

## Herkules 2E

Microwave motion detector  
for industrial doors

Simple, proven, versatile

- Quick and easy installation
- Two completely independent programmable outputs
- Quick reaction time is ideal for high-speed doors
- Differentiates between people & vehicles

[www.bircher.com](http://www.bircher.com)

## Herkules 2E

### Microwave motion detector for industrial doors

#### Universally applicable

The Herkules 2E microwave motion detector has been specifically developed for use with industrial doors. It detects, differentiates between or masks out people or vehicles. Herkules 2E is a logical further refinement of our successful microwave detectors that are also used for automatic doors. Our long experience, combined with progressive planar technology, gives Herkules 2E a considerable range of functions and reliability.

#### User-friendly

Herkules 2E features two completely independent programmable outputs that give you complete flexibility for every application and the pulse on exit feature makes it even more versatile. Herkules 2E is extremely user-friendly and can be easily programmed.

### Your benefits

#### Quick installation

- Quick and easy installation: bi-directional remote control and user-friendly settings

#### Two outputs

- Two completely independent programmable outputs for endless application scenarios

#### Easy installation and startup

- 6-wire cable and thicker wire gauge for easier installation
- 7 m long cable for maximum installation flexibility
- Mounting height range of 2 to 7 m covered by one sensor (no need for multiple sensors at different heights)

#### Intelligent control

- Differentiation between pedestrian and/or vehicle traffic
- Detects traffic moving toward and away from the door
- Cross-traffic optimisation prevents unwanted opening

#### Indoor and outdoor use

- Operating temperature range of  $-30^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$  is ideal for cold storage applications

#### Door activation

- Ideal substitute for in-ground loops

Pulse on exit signals the door to close after vehicles leave: Protect vehicles & doors, save time, and keep unattended fire stations secure.

The industrial door must be secured with a safety edge / light barrier.

## Extended accessories

The RegloBeam 2 bidirectional remote control allows the Herkules 2E to be configured quickly and completely from ground level, and every single parameter can be adapted to the particular situation. The RegloBeam 2 is also used with many of our other detectors.

RegloBeam 2 remote control

## Reliable in every application

### Situation

Activation of sectional gates

### Solution

- Optimum traffic flow thanks to reliable activation of the industrial door controller

### Advantages

- Direction recognition means the industrial door only remains open for as long as necessary
- Crossing traffic masking to prevent unintentional opening of the industrial door

### Situation

Use on roller gate or high-speed door in logistics areas

### Solution

- Early-stage opening simply by selecting one of five possible field sizes (see back page) and rapid detection of people/vehicles

### Advantages

- Optimum goods flow thanks to early-stage detection and immediate opening
- Even low and wide industrial doors profit from the flexible settings for ideal activation

### Situation

Activation of sliding gates for people and vehicles

### Solution

- Detection of people/vehicles with separate outputs for intelligent activation

### Advantages

- With people detection the industrial door will only open part way.

### Situation

Delivery at folding door with truck

### Solution

- Also ideal for use on wide and tall industrial doors

### Advantages

- Reliable detection due to flexible adjustments to the microwave field
- No need for the driver to get out
- Optimum traffic flow thanks to early-stage detection and immediate opening

Maximum field dimensions

2.5 m mounting height  
Setting angle 15°–45°

4.5 m mounting height  
Setting angle 15°–45°

7 m mounting height  
Setting angle 15°–45°

Technical data

Mechanical data	
Mounting height	2.0 to 7.0 m
Connection type	cable 10 m, 6 x AWG 26 (0.14 mm²)
Housing material	black anodised aluminium, polycarbonate cover
Dimensions	134 x 82 x 75 mm
Weight	820 g incl. cable

Technology data	
Technology	Doppler radar with planar module
Transmitting frequency	24.05–24.25 GHz
Transmitting power	< 20 dBm
Max. detection speed	25 km/h for vehicles

Electrical data	
Operating voltage	10–28 V AC, 12–36 V DC
Operating current	Max. 75 mA
Outputs	Relay
Switching voltage	Max. 48 V AC/DC
Switching current	Max. 0.5 A AC

Ambient conditions	
Protection class (EN 60529)	IP65
Temperature range	–30 °C to +60 °C
Air humidity	0% to 95% relative, without condensation

Standards	
Approvals	CE 0682 ! / FCC / IC
Suitable for the following countries	EU, EFTA, US, CA

**Note**  
Technical details and recommendations on our products are based upon experience and represent guidelines for the user. Details in brochures and specification sheets do not guarantee any special product features, apart from those which we confirm in individual cases. We reserve the right to make changes as the result of technical developments.

# BESPOKE

...as many buttons as you like.

- Installer programmed
- GSM programmed by SMS (GSM only)
- Available with up to 24 call buttons
- Dial in to open & authorised incoming calls
- SMS alerts (GSM only)
- No dedicated handsets required
- Internal time clock
- 2 relays – additional relays optional
- Exit release input
- Forward call up to 8 additional numbers
- Activity log downloaded locally or remotely
- Prox cut out option
- Camera option
- Available as GSM or Landline
- 2 Year Warranty
- Safe option available with Hub

The Bespoke is a telephone or GSM based intercom system to call from 1 to 24 separate numbers via individual buttons. The system is installer programmed remotely via SMS, from a standard telephone/mobile or data over IP also locally via the keypad (where fitted) or USB connection.

Each button is programmed to call a different telephone number relating to the destination (flat, office, house etc). When a visitor presses the required button the Electronic Voice Assist™ will confirm that the call is being made and a telephone call is made from the entrance panel to the destination telephone number.

The telephone rings in the premises (if a mobile phone is called the recipient could be anywhere in the world!) and if the recipient is in they can answer the call as normal and speak to the visitor. If the line is engaged or the recipient is out, the Telguard is able to search for up to 8 other phone numbers i.e. office, mobile, relation etc. The system is compatible with an answer machine. If the recipient is out and has not set up any other facility then the Electronic Voice Assist™ will say that it has not been possible to connect the call.

If the recipient chooses to allow their visitor access they simply press a digit on their telephone handset and the tone from the button will operate a relay linked to the entrance (door, gate or barrier) and the visitor has access. The optional keypad is used for coded entry for local access via a 4 – 8 digit code. The user presses the code into the panel and the entrance can be opened.

There are three connections to the basic system, a 230 Volt supply to feed the 12 Volt 1 Amp PSU (the PSU we supply with the system must be used and should not power any other equipment), then there is a choice of Land Line or GSM bridge board which is connected via an external aerial or telephone lead. The land line bridge board requires an analogue telephone connection – either PSTN (Public Switched Telephone Network) or an analogue extension from a PABX (Private Automated Branch eXchange) and a link to the equipment to be operated i.e. a gate, door lock, barrier etc.

The GSM requires a Pay-As-You-Go or Contract SIM plus an aerial which is supplied with the system. Other facilities available are a trade button linked to an internal time clock with 9 available time periods & automatic BST/GMT update.

An activity log can also be downloaded remotely via data over IP or locally by USB connection. The internal memory will hold 1000 entries and once the maximum is reached the earliest logs are overwritten.

A camera may be fitted as part of the fascia and operates independently to the Telguard. The picture from the camera may be viewed on a television inside the premises. This is achieved by connecting the camera into the communal TV aerial amplifier with a modulator. Proximity may also be fitted as part of the fascia and operates independently to the Telguard. We have standard cut outs for the most popular makes of proximity reader.

# Company Sticker Here.

## Tech Spec..

- **Warranty:** 2 year gold warranty including return to manufacturer (full parts & Labour) and unlimited programming requests in writing.
- **Power:** 12 Volt 1 Amp DC PSU (as supplied and must be dedicated to the Telguard).
- **Call Buttons:** 1 – 24 Stainless steel or backlit.
- **Coded Entry:** Via optional keypad 4 – 8 digits, input for a further keypad and could be used as an exit keypad. 400 codes maximum.
- **Trade:** Optional trade button linked to internal time clock with 9 available time periods & automatic BST/GMT update.
- **Phone Line:** (for land line option): Analogue BT type line or PABX analogue extension.
- **GSM SIM:** Supplied with O2 or Vodafone via Telguard Telecom. See website.
- **Network Providers:** SIMs must be data enabled, the network 3 is not currently compatible with our equipment.
- **Telephone Type:** Standard tone generating telephone, cordless or mobile phone.
- **Tone Type:** DTMF (Dual Tone Multi Frequency).
- **Programming:** Installer programmed via SMS (GSM), dial in using a telephone or mobile via the Electronic Voice Assist™, via keypad (where fitted), remotely via modem or USB connection.
- **Relays:** Dual Opto Relay providing 2 x outputs supplied as standard, lock relay also available (please see website).
- **Cable Distance:** Up to 300 metres from Hub (where applicable)
- **Relay Activation Time:** 1 – 60 seconds, adjustable locally and remotely.
- **Volume:** 1-9 adjustable locally and remotely.
- **Operating Commands:** Default #, 2#, 3#, 4#, 5#, 6#, 7#, 8#, 9#. All relay commands are configurable.
- **Exit Release Input:** Via auxiliary input. Unable to be used with Day/Night feature.
- **Day/Night Feature:** Able to call a different number at night to the number called during the day. Switched locally or remotely. Unable to be used with Exit Release Input facility.
- **Multi Number Calling:** Up to 8 different follow on numbers are assignable to each call point.
- **Call Point Profile:** This utilizes the on board time clock enabling custom profile functions to be activated eg: calling an alternative number.
- **Concierge:** All call destinations are routed to one main number.
- **Authorised call access:** Numbers stored in this part of the memory can activate a pre-determined relay simply by calling the number of the system. If the number calling is on the authorised list the relay will activate. (Please note that the Land Line system requires CLI from the line provider for this function to operate). Up to 900 numbers.
- **SMS via Input:** An SMS message may be sent (GSM only) on receipt of an output from equipment associated with the TelGuard. This could be to indicate low parking ticket paper on a parking system, or a passive detector to report movement, loop detector or an alarm.
