## *Green fencing*

Mobilane Green Screen is a high-quality fence which comes with a 10-year guarantee. The hedge units can be cut to the required height or width using a standard bolt cutter. The hedging sits in a biodegradable base and can be installed all year round, except in periods of frost. The units can be fixed to both metal and wooden posts using specially designed brackets.

We would all like to live in greener surroundings, but we would rather not wait months, even years, for it to happen. The hedge is woven into a high-quality fencing unit, which acts as an effective but friendly deterrent to children and pets.

Not everyone has the same taste in hedges, so that is why Mobilane has come up with a number of different types. To provide some variation, you can use different plants, colours and heights.

EASY OPTION  
FOR AN  
INSTANT  
BOARDER

## *Green fencing*

Mobilane Green Screen can be used as a border in many different models and diverse ways. For example, you might want to use it for partitioning your garden, or simply for screening off your patio, swimming pool or car-port. Or maybe for concealing unsightly wheelie-bins.

And how about using the Green Screen in its wooden base on the balcony? In fact, the possibilities are endless. To give you even greater privacy, there are hedges available in heights of 220 cm and 300 cm.

## *Green roofing*

In urban areas, it can be often difficult to create green surroundings. However, thanks to MobiRoof living roof systems, you don't have to wait years for this to happen.

The ready-made cassette comes with a special substrate and six to eight types of sedum. MobiRoof is easy to install using a click-system which attaches the cassettes to each other.

CAN BE USED  
FOR DIVERSE  
APPLICATIONS

AN INSULATING  
SYSTEM IN BOTH  
SUMMER AND  
WINTER

# MobiRoof®

## Green roofing

The unique lightweight cassette system (54 x 54 x 9cm) comes with a special substrate for rainwater drainage and storage. The retention capacity is around 20 litres per m<sup>2</sup>. Its light weight and compactness means that it is easy to install on garages, car-ports, extensions, garden sheds, etc.

### BENEFITS

- » Ready-made, equipped with substrate and sedum
- » Has an insulating effect both in summer and winter
- » Slows down and reduces the drainage of rainwater
- » Extends the lifespan of the roof covering
- » Helps purify rainwater
- » Helps reduce CO<sub>2</sub> emissions
- » Helps reduce fine particles
- » Has a noise-absorbent effect
- » Can be used on both flat and gently-sloping roofs
- » Easy to remove in the event of leaks
- » Increases property values
- » Easy to install
- » Low-maintenance
- » Suitable for customised installation

SEPARATES  
AND ABSORBES  
NOISE

## Instant Noise Reduction Screen

The need for peace and privacy increases by the day. Nowadays, people are less prepared to put up with excessive noise caused by neighbours or heavy traffic.

There is a now a solution in the form of the ready-made NoiStop, which can be installed in next to no time. The NoiStop screens have a diversity of uses. They can be used as a garden fence, offering direct privacy, security and, of course, peace and quiet.

In addition, the panels are also effective in cutting out excessive noise in the following situations, for example:

- A railway line at the bottom of the garden
- A children's playground
- A busy road at the bottom of the garden
- Noisy neighbours

In fact, it has countless applications.

## *Instant Noise Reduction Screen*

The NoiStop screens, depending on their height and position, can create a noise reduction of 9 to 12 dB. This amounts to noise reduction levels of 50% - 70%. This is remarkable, especially when you consider that noise can never be fully eliminated.

### **BENEFITS**

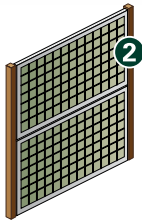

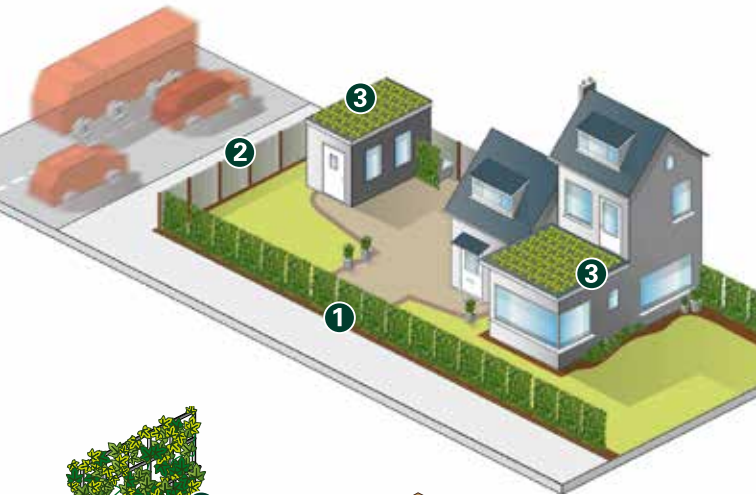

- » Excellent noise reduction (scientifically tested)
- » Direct privacy and security
- » Narrow construction, ideal for greenery
- » Ideal for self-installation
- » Low-maintenance with an expected minimum lifespan of 25 years
- » Different sizes allow greater flexibility
- » Ideal for wind protection

The NoiStop screens are made from high-quality materials. The core is comprised of compressed stone wool. This is kept in place by a strong galvanised steel mesh. The screens are available in different sizes so that you can work with varying heights. The screens can be attached to both wooden and metal posts. The screens have a minimum lifespan of 25 years.
