

- 500 x 500 Wallbarn MTray green roof module, The fully established, mature sedum and wild flower mix
100mm deep engineered compost substrate ensuring draught resistance.
- Wallbarn 300gsm recycled fleece
- 100mm PIR insulation above joists
50mm PIR insulation between joists
- 1000 x 1000mm double glazed roof light
- washed pebble border
- Silver aluminium perforated border trim walbarn

Maintenance Method Statement

The Mtray extensive green roof sedum system has been designed to have greater water retention and deliver a very hardy green roof that will tolerate extreme conditions whilst providing a deep substrate for strong growth.

Watering the sedum in dry hot periods of more than 2 weeks is advisable.

At the end of Summer and end of Winter remove any dead leaves and vegetation that have accumulated.

Application of a slow release fertiliser is advisable at twice a year once in March and again in June.

The sedum and wildflower mix should not be pruned or mown. The wildflowers will self seed and should not be cleared after flowering.
