[TORC System](#)

Concrete Renovations Ltd can offer the doff system for cleaning concrete, stone & brick.

DOFF cleaning is a steam based, stone cleaning system. It's unlike any other steam system and can achieve temperatures 150°C at the nozzle end. Concrete Renovations operators are able to vary the temperature and pressure to remove either many types of paint or biological matter.

WHAT CAN DOFF CLEANING BE USED FOR?

The steam/superheated water will remove moss, algae, fungi and other biological matter and will also kill off spores. This means there's then no need to use a chemical biocide during the removal process or as a protection against further biological activity.

HOW DOES IT WORK?

DOFF cleaning cleans stonework and masonry using high temperature steam. When the temperature in the system is high the pressure on the surface being cleaned is very gentle and the volume of water is low. The surface is therefore not saturated and will be dry within minutes.

For more information about concrete renovations and DoFF Cleaning call us on (01733) 560 362.
