2020/4559/P	Luli Pashkaj	23/11/2020 11:38:24	OBJ	<p>As a resident of Haddo House, I object on the following grounds:</p> <p>1. Our building forms part of the Dartmouth Park conservation area and is a point of interest to many locals and 'passers by'. I have many times observed our building being admired for its interesting architectural structure. It attracts much attention, even the local youths have managed to access the roof a number of times, graffitiing the roof turrets, (an accident waiting to happen). The graffiti has remained for the best part of a year, it is a complete and utter eye sore and I dread to imagine what more of a hideous sight it would be with a scattering of electrical apparatus. The apparatus will create visual clutter and diminish what is a beautiful skyline. It will be a constant reminder of how Camden holds the opinions and feelings of its residents in such disregard.</p> <p>Dartmouth Park Conservation Area Appraisal and Management Statement Adopted 22 January 2009 acknowledges our building as a place of interest and is visible from ground level, as well as the surrounding buildings, homes and roads.</p> <p>7.46 Chetwynd Road (east): (edited) From York Rise the street is densely developed but as the slope of the hill lessens the scale changes to larger semi detached and some detached houses with wider plot widths. The impact of the steeply rising street makes the roofscape highly visible. Looking west from the top there are clear views of the road and roofscape of Chetwynd Road (West) stretching down the hill towards Haddo House, which forms an important architectural component of this view.</p> <p>2. However much the telecoms company would try to persuade us of the safety of such technologies, their opinion is biased. They may say there is not enough evidence to show its harmful to health, but I would like to say there is not enough evidence to say that it's safe. My neighbours and I do not wish to be guinea pigs. There is much evidence to show that it is particularly harmful to the developing brains of children (we are surrounded by 4 schools) not to mention the 20 children living in Haddo House. The WHO have deemed it as a possible known carcinogen.</p> <p>3. I am shocked that we are being treated in such a Draconian way at a time where I thought democracy ruled, 60 residents signed a petition objecting to these masts. Since September 2019, Camden and Waldons have imposed upon us much worry and anxiety, they sneakily submitted their application whilst we are distracted with the current CoVid19 crisis, knowing too well that we cannot canvas our neighbours because we are adhering to the social distancing rules. Once again they have sneakily submitted another application whilst we went into a second lockdown even though their practically identical application was rejected. They show disregard to the opinion of residents and planning officers. Camden's own Planning Guidance: Planning for health and wellbeing March 2018 states that:</p> <p>1.22 Health and wellbeing are, to a large extent, determined by the environment in which we live. Transport, housing, education, income, working conditions, unemployment, air quality, green space, climate change and social and community networks can have a greater influence on our healthcare provision or genetics. Many of these determinants of health can be shaped by the planning system.</p> <p>I ask you the representative of Camden, to stand by your words! It's our environment and our beliefs about it that influence our genetics and our genetic response. Stress has been proven to be a precursor to disease (please see: Dr Bruce H. Lipton PHD - The biology of belief). Please do not ignore us and our wishes.</p>

				<p>4. We live on a very busy, noisy junction and the very possibility of anymore noise fills us with dread. Sirens echo all along Mansfield Road 24hrs a day, even when there are no cars on the road. Some emergency services are mindful that people are asleep, others less mindful. We have the local youth with their loud motorbikes accelerating to the maximum up and down Mansfield Road - where are the police? We are located in a wind tunnel and even when it's the slightest bit windy, it sounds like a tornado outside. The mast will create resistance to the wind and will be noisy.</p> <p>5. Why should we believe your statement regarding coverage when you have not provided any evidence to substantiate your claims. The installation of 12 masts have already been agreed at the Ingestre Road Estate, so why do you need this site?</p> <p>6. We don't want them! No means no!</p> <p>7. The application 2020/4559/P is practically identical to the earlier application 2020/1456/P - which was rejected. Our building hasn't miraculously moved position and views to our building haven't changed, irregardless if you have slightly moved the antenna a couple of metres in.</p>
