Assessment

The laurel the are listed to be removed in the application are not plants that would usually be protected by a tree preservation order or in most cases considered to be trees but rather shrubs. The species is ecologically undesirable and supresses other more beneficial species. It is recommended that their removal is approved.

The reduction works to the sycamores is considered to be relatively minor in nature and will not be detrimental to the health of the trees or their long term contribution to the character of the conservation area.

It is recommended that the application is approved.
