Dear Sir/Madam,

Chester Road, Camden – Air Quality Neutral

RPS undertook an air quality assessment dated 22nd January 2020 to support the planning application for the proposed hostel development at Chester Road, Camden. An air quality neutral calculation was scoped out of this assessment.

An air quality neutral calculation quantifies the emissions of atmospheric pollutants from the development at source (i.e. from vehicles and building plant) and compares the emissions with official benchmark levels that define neutrality set out in the Air Quality Neutral Planning Support Update (AQC, April 2014, Air Quality Neutral Planning Support Update: GLA 80371)

The proposed development will not add any new sources of emissions to air from vehicles or building plant and therefore the development emissions are 0 kg of NO_x and PM₁₀ per annum. Regardless of the benchmark emissions, the development emissions will be below the relevant benchmarks and therefore the development is considered to be air quality neutral.

Yours sincerely,
for RPS Consulting Services Ltd

Kathryn Barker
Principal Air Quality Consultant
