Dear Sirs

10 Brookfield Park

The samples you sent in relation to the above have been examined. Their structures were referable as follows:

TH1, 0.7m		
1 no.	Examined root: referable to JUGLANS (Walnut); also the related Hickory and Wingnut.	Alive, recently*.
TH2, 0.4m		
4 no.	Examined root: again, most like JUGLANS (Walnut); also the related Hickory and Wingnut.	Alive, recently*.
TH2, 0.9m		
4 no.	Examined root: as above, most referable to JUGLANS (Walnut); also the related Hickory and Wingnut. Note that this sample was in POOR condition - it was also very THIN.	Dead*.

Click here for more information: [JUGLANS](#)

I trust this is of help. Please call us if you have any queries; our Invoice is enclosed.

Yours faithfully

Dr Ian B K Richardson

* Based mainly on the Iodine test for starch. Starch is present in some cells of a living woody root, but is more or less rapidly broken down by soil micro-organisms on death of the root, sometimes before decay is evident. This result need not reflect the state of the parent tree.
